## Intellectual Property Rights

ETSI has not been informed of the existence of any Intellectual Property Right (IPR) which could be, or could become essential to the present document. However, pursuant to the ETSI Interim IPR Policy, no investigation, including IPR searches, has been carried out. No guarantee can be given as to the existence of any IPRs which are, or may be, or may become, essential to the present document.

---

## Foreword

This European Standard (EN) has been produced by ETSI Project Digital Enhanced Cordless Telecommunications (DECT) in co-operation with the ETSI Technical Committee Global System for Mobile communications (GSM).

<b>National transposition dates</b>	
Date of adoption of this EN:	23 January 1998
Date of latest announcement of the present document (doa):	31 May 1998
Date of latest publication of new National Standard or endorsement of the present document (dop/e):	30 November 1998
Date of withdrawal of any conflicting National Standard (dow):	30 November 1998

## iTeh STANDARD PREVIEW (standards.iteh.ai)

---

## Introduction

SIST EN 300 703:2001

The present document is a part of a set of standards for the Digital Enhanced Cordless Telecommunications / Global System for Mobile communications (DECT/GSM) Interworking Profile (IWP) concept that includes:

- general description of service requirements, functional capabilities and information flows, (ETS 300 466 [13]);
- access and mapping (protocol/procedure description for 3,1 kHz speech service), (ETS 300 370 [11]);
- GSM-MSC/DECT-FP Fixed Interconnection, (ETS 300 499 [14]);
- **GSM Phase 2 supplementary services implementation, (the present document);**
- short message services, point to point and cell broadcast, (ETS 300 764 [51]);
- implementation of bearer services, (ETS 300 756 [50]);
- implementation of facsimile group 3, (ETS 300 792 [52]).

The present document is based on Digital Enhanced Cordless Telecommunications (DECT) Common Interface (CI) specification ETS 300 175, parts 1 to 8 [1] to [8] to enable DECT terminals to inter-work in the public and private environment with DECT systems which are connected to a Global System for Mobile communications (GSM) core infrastructure.

In addition, the present document is based on ETS 300 444 [12] to enable the same DECT/GSM terminal to inter-work with a DECT Fixed Part (FP) complying to the Generic Access Profile (GAP) requirements, irrespective of whether this FP provides residential, business or public access services. General attachment requirements and speech attachment requirements are based on TBR 6 [53] and TBR 10 [54].

Further details on the DECT system may be found in ETR 015 [55], ETR 043 [56], and ETR 056 [57], ETS 300 176-1 [9] and ETS 300 176-2 [10].

The present document is based upon ETS 300 557 [38] (GSM 04.08), ETS 300 565 to ETS 300 572 [41] to [48] (GSM 04.8x and GSM 04.90) and ETS 300 370 [11].

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 300 703:2001](#)

<https://standards.iteh.ai/catalog/standards/sist/d6218d1a-cd61-4295-b025-2ab8fleeda89/sist-en-300-703-2001>

## 1 Scope

The present document specifies the interworking procedures and mappings necessary to ensure that Global System for Mobile communication (GSM) Phase 2 supplementary services can be provided over Digital Enhanced Cordless Telecommunications (DECT), as specified in ETS 300 466 [13]. To enable DECT terminals to interwork with DECT systems which are connected to the GSM infrastructure, the DECT access protocols and Fixed Part (FP) and Portable Part (PP) interworking and mappings are specified for Mobile Switching Centre (MSC) attachment of the DECT FP.

In the present document, the general aspects relevant for interworking are given, together with the interworking procedures and mappings used at the DECT radio interface for registration, erasure, activation, deactivation, invocation and interrogation of supplementary services. Provision and withdrawal of supplementary services is an administrative matter between the DECT subscriber attached to the GSM network, and the service provider and causes no signalling on the radio interface.

Under the aspects of interworking, definitions and descriptions of supplementary services are given in ETS 300 466 [13]. The present document covers the additions to the interworking and mappings in ETS 300 370 [11] for the DECT FP and PP, to ensure that GSM supplementary services can be provided over the DECT air interface.

## 2 References

References may be made to:

- a) specific versions of publications (identified by date of publication, edition number, version number, etc.), in which case, subsequent revisions to the referenced document do not apply; or
- b) all versions up to and including the identified version (identified by "up to and including" before the version identity); or
- c) all versions subsequent to and including the identified version (identified by "onwards" following the version identity); or <https://standards.iehl.ai/catalog/standards/sist/d6218d1a-cd61-4295-b025-2ab8fleeda89/sist-en-300-703-2001>
- d) publications without mention of a specific version, in which case the latest version applies.

A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.

## iTeh STANDARD PREVIEW

---

### 3 Definitions, abbreviations and symbols (standards.iteh.ai)

[SIST EN 300 703:2001](#)

#### 3.1 Definitions

<https://standards.iteh.ai/catalog/standards/sist/d6218d1a-cd61-4295-b025-2ab8fleeda89/sist-en-300-703-2001>

For the purposes of the present document, the following definitions apply:

**attach:** The process whereby a Portable Part (PP) within the coverage area of a Fixed Part (FP) to which it has access rights, notifies this FP that it is operative. The reverse process is detach, which reports the PP as inoperative.

NOTE 1: An operative PP is assumed to be ready to receive calls.

**authentication:** The process whereby a DECT subscriber is positively verified to be a legitimate user of a particular FP.

NOTE 2: Authentication is generally performed at call set-up, but may also be done at any other time (e.g. during a call).

**bearer service:** A type of telecommunication service that provides a defined capability for the transmission of signals between user-network interfaces.

NOTE 3: The DECT user-network interface corresponds to the top of the Network (NWK) layer (layer 3).

**C-plane:** The control plane of the DECT protocol stacks, which contains all of the internal DECT protocol control, but may also include some external user information.

NOTE 4: The C-plane stack always contains protocol entities up to and including the network layer.

**call:** All of the NWK layer processes involved in one network layer peer-to-peer association.

NOTE 5: Call may sometimes be used to refer to processes of all layers, since lower layer processes are implicitly required.

**DECT Network (DNW):** A network that uses the DECT air interface to interconnect a local network to one or more portable applications. The logical boundaries of the DECT network are defined to be at the top of the DECT network layer.

NOTE 6: A DNW is a logical grouping that contains one or more Fixed radio Terminations (FTs) plus their associated Portable radio Termination (PT). The boundaries of the DECT network are not physical boundaries.

**external handover:** The process of switching a call in progress from one FT to another FT.

**Fixed Part (DECT Fixed Part) (FP):** A physical grouping that contains all of the elements in the DECT network between the local network and the DECT air interface.

NOTE 7: A DECT FP contains the logical elements of at least one FT, plus additional implementation specific elements.

**FP GSM PLMN attachment (DECT FP attached to a GSM MSC):** A definition of a functional environment where a DECT system (FP) is attached to an GSM MSC. The MSC in this case refers to a functional entity providing the required Mobility Management (MM) and Call Control (CC) functionality defined in the present document in order to communicate with the FP.

**Fixed radio Termination (FT):** A logical group of functions that contains all of the DECT processes and procedures on the fixed side of the DECT air interface.

NOTE 8: A FT only includes elements that are defined in the DECT CI standard. This includes radio transmission elements together with a selection of layer 2 and layer 3 elements.

**Generic Access Profile (GAP):** A defined part of the DECT Common Interface standard (DECT CI) that ensures interoperability between FPs and PPs for public business and residential access services.

**geographically unique identity:** This term relates to FP identities, Primary Access Rights Identities (PARIs) and Radio Fixed Part Identities (RFPIs). It indicates that two systems with the same PARI, or respectively two RFPs with the same RFPI, cannot be reached or listened to at the same geographical position.

**Global Network (GNW):** A telecommunication network capable of offering a long distance telecommunication service.  
<https://standards.ieee.org/catalog/standards/sist/d6218d1a-cd61-4295-b025-2ab811eeda89/sist-en-300-703-2001>

NOTE 9: The term does not include legal or regulatory aspects, nor does it indicate if the network is a public or a private network.

**globally unique identity:** The identity is unique within DECT (without geographical or other restrictions).

**handover:** The process of switching a call in progress from one physical channel to another physical channel. These processes can be internal (see internal handover) or external (see external handover).

NOTE 10: There are two physical forms of handover, intra-cell handover and inter-cell handover. Intra-cell handover is always internal. Inter-cell handover can be internal or external.

**incoming call:** A call received at a PP.

**inter-cell handover:** The switching of a call in progress from one cell to another cell.

**internal handover:** Handover processes that are completely internal to one FT. Internal handover re-connects the call at the lower layers, while maintaining the call at the NWK layer.

NOTE 11: The lower layer reconnection can either be at the Data Link Control (DLC) layer (connection handover) or at the MAC layer (bearer handover).

**inter-operability:** The capability of FPs and PPs, that enable a PP to obtain access to teleservices in more than one location area and/or from more than one operator (more than one service provider).

**inter-operator roaming:** Roaming between FP coverage areas of different operators (different service providers).

**Interworking Unit (IWU):** A unit that is used to interconnect sub-networks.
