Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 15892 was prepared by the Consultative Committee for Space Data Systems (CCSDS) (as CCSDS 713.5-B-1) and was adopted (without modifications except those stated in clause 3 of this International Standard) by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 13, *Space data and information transfer systems*.

Space data and information transfer systems — Protocol specification for space communications — Security protocol

1 Scope

This International Standard specifies the requirements for the services and protocols of the space communications protocol specification (SCPS) security protocol (SP). These requirements are to allow independent implementations of this protocol to interoperate if they use compatible security service algorithms.

This International Standard is applicable to any kind of space mission or infrastructure, regardless of complexity.

2 Conformance

This International Standard is applicable to all systems that claim conformance to the ISO/CCSDS SCPS security protocol.

3 Requirements

Requirements are the technical recommendations made in the following publication (reproduced on the following pages), which is adopted as an International Standard:

CCSDS 713.5-B-1, May 1999, *Recommendation for space data system standards — Space communications protocol specification (SCPS) — Security protocol (SCPS-SP).*

For the purposes of international standardization, the modifications outlined below shall apply to the specific clauses and paragraphs of publication CCSDS 713.5-B-1.

Pages i to v

This part is information which is relevant to the CCSDS publication only.

Pages B-1 to B-2

Add the following information to the references indicated in annex B:

[B12] Document CCSDS 713.0-B-1, May 1999, is equivalent to ISO 15891:2000.

[B13] Document CCSDS 714.0-B-1, May 1999, is equivalent to ISO 15893:2000.

[B16] Document CCSDS 701.0-B-2, November 1992, is equivalent to ISO 13420:1997.

[B17] Document CCSDS 102.0-B-4, November 1995, is equivalent to ISO 13419:1997.

[B18] Document CCSDS 201.0-B-2, November 1995, is equivalent to ISO 12171:1998.

4 Revision of publication CCSDS 713.5-B-1

It has been agreed with the Consultative Committee for Space Data Systems that Subcommittee ISO/TC 20/SC 13 will be consulted in the event of any revision or amendment of publication CCSDS 713.5-B-1. To this end, NASA will act as a liaison body between CCSDS and ISO.

CCSDS RECOMMENDATION FOR SCPS SECURITY PROTOCOL (SCPS-SP)

AUTHORITY

Issue:	Blue Book, Issue 1
Date:	May 1999
Location:	Newport Beach, California, USA

This document has been approved for publication by the Management Council of the Consultative Committee for Space Data Systems (CCSDS) and represents the consensus technical agreement of the participating CCSDS Member Agencies. The procedure for review and authorization of CCSDS Recommendations is detailed in reference [B1], and the record of Agency participation in the authorization of this document can be obtained from the CCSDS Secretariat at the address below.

This Recommendation is published and maintained by:

CCSDS Secretariat
Program Integration Division (Code MT)
National Aeronautics and Space Administration
Washington, DC 20546, USA

STATEMENT OF INTENT

The Consultative Committee for Space Data Systems (CCSDS) is an organization officially established by the management of member space Agencies. The Committee meets periodically to address data systems problems that are common to all participants, and to formulate sound technical solutions to these problems. Inasmuch as participation in the CCSDS is completely voluntary, the results of Committee actions are termed **Recommendations** and are not considered binding on any Agency.

This **Recommendation** is issued by, and represents the consensus of, the CCSDS Plenary body. Agency endorsement of this **Recommendation** is entirely voluntary. Endorsement, however, indicates the following understandings:

o Whenever an Agency establishes a CCSDS-related **standard**, this **standard** will be in accord with the relevant **Recommendation**. Establishing such a **standard** does not preclude other provisions which an Agency may develop.

o Whenever an Agency establishes a CCSDS-related **standard**, the Agency will provide other CCSDS member Agencies with the following information:

-- The **standard** itself.

-- The anticipated date of initial operational capability.

-- The anticipated duration of operational service.

o Specific service arrangements shall be made via memoranda of agreement. Neither this **Recommendation** nor any ensuing **standard** is a substitute for a memorandum of agreement.

No later than five years from its date of issuance, this **Recommendation** will be reviewed by the CCSDS to determine whether it should: (1) remain in effect without change; (2) be changed to reflect the impact of new technologies, new requirements, or new directions; or, (3) be retired or canceled.

In those instances when a new version of a **Recommendation** is issued, existing CCSDS-related Agency standards and implementations are not negated or deemed to be non-CCSDS compatible. It is the responsibility of each Agency to determine when such standards or implementations are to be modified. Each Agency is, however, strongly encouraged to direct planning for its new standards and implementations towards the later version of the Recommendation.

FOREWORD

This Recommendation defines the services and protocols of the Space Communications Protocol Specification (SCPS) Security Protocol (SP).

Through the process of normal evolution, it is expected that expansion, deletion, or modification of this document may occur. This Recommendation is therefore subject to CCSDS document management and change control procedures as defined in reference [B1]. Current versions of CCSDS documents are maintained at the CCSDS Web site:

http://www.ccsds.org/

Questions relating to the contents or status of this document should be addressed to the CCSDS Secretariat at the address indicated on page i.

CCSDS RECOMMENDATION FOR SCPS SECURITY PROTOCOL (SCPS-SP)

At time of publication, the active Member and Observer Agencies of the CCSDS were

Member Agencies

- British National Space Centre (BNSC)/United Kingdom.
- Canadian Space Agency (CSA)/Canada.
- Centre National d'Etudes Spatiales (CNES)/France.
- Deutsches Zentrum für Luft- und Raumfahrt e.V. (DLR)/Germany.
- European Space Agency (ESA)/Europe.
- Instituto Nacional de Pesquisas Espaciais (INPE)/Brazil.
- National Aeronautics and Space Administration (NASA)/USA.
- National Space Development Agency of Japan (NASDA)/Japan.
- Russian Space Agency (RSA)/Russian Federation.

Observer Agencies

- Austrian Space Agency (ASA)/Austria.
- Central Research Institute of Machine Building (TsNIIMash)/Russian Federation.
- Centro Tecnico Aeroespacial (CTA)/Brazil.
- Chinese Academy of Space Technology (CAST)/China.
- Commonwealth Scientific and Industrial Research Organization (CSIRO)/Australia.
- Communications Research Laboratory (CRL)/Japan.
- Danish Space Research Institute (DSRI)/Denmark.
- European Organization for the Exploitation of Meteorological Satellites (EUMETSAT)/Europe.
- European Telecommunications Satellite Organization (EUTELSAT)/Europe.
- Federal Service of Scientific, Technical & Cultural Affairs (FSST&CA)/Belgium.
- Hellenic National Space Committee (HNSC)/Greece.
- Indian Space Research Organization (ISRO)/India.
- Industry Canada/Communications Research Centre (CRC)/Canada.
- Institute of Space and Astronautical Science (ISAS)/Japan.
- Institute of Space Research (IKI)/Russian Federation.
- KFKI Research Institute for Particle & Nuclear Physics (KFKI)/Hungary.
- MIKOMTEK: CSIR (CSIR)/Republic of South Africa.
- Korea Aerospace Research Institute (KARI)/Korea.
- Ministry of Communications (MOC)/Israel.
- National Oceanic & Atmospheric Administration (NOAA)/USA.
- National Space Program Office (NSPO)/Taipei.
- Swedish Space Corporation (SSC)/Sweden.
- United States Geological Survey (USGS)/USA.

CCSDS RECOMMENDATION FOR SCPS SECURITY PROTOCOL (SCPS-SP)

CONTENTS

CCSDS RECOMMENDATION FOR SCPS SECURITY PROTOCOL (SCPS-SP)

1 INTRODUCTION

1.1 PURPOSE

The purpose of this Recommendation is to define the services and protocols of the Space Communications Protocol Specifications (SCPS) Security Protocol (SP). This definition will allow independent implementations of the protocol to interoperate if they use compatible security service algorithms.

1.2 SCOPE

This Recommendation is intended to be applied to all systems that claim conformance to the SCPS Security Protocol.

1.3 APPLICABILITY

This Recommendation is designed to be applicable to any kind of space mission or infrastructure, regardless of complexity. It is intended that this should become a uniform standard among all CCSDS Agencies.

1.4 ORGANIZATION OF RECOMMENDATION

This document is organized as follows:

- Section 1 provides an introduction to the Recommendation;
- Section 2 provides an overview of the Security Protocol;
- Section 3 provides the protocol specification and the header layouts;
- Section 4 provides details on protocol processing;
- Section 5 provides information on Security Association Attributes;
- Annex A provides expansion of acronyms and abbreviations used in the document;
- Annex B lists informative references;
- Annex C provides the Protocol Implementation Conformance Statement (PICS);
- Annex D provides the Security Protocol's service specification.
