## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10079-1 was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Subcommittee SC 8, *Suction devices for hospital and emergency care use*.

This second edition cancels and replaces the first edition (ISO 10079-1:1991), which has been technically revised.

ISO 10079 consists of the following parts, under the general title *Medical suction equipment*:

— Part 1: *Electrically powered suction equipment — Safety requirements*

— Part 2: *Manually powered suction equipment*

— Part 3: *Suction equipment powered from vacuum or pressure*

Annexes A to L of this part of ISO 10079 refer to Annexes A to L of IEC 60601:1988, respectively. Annexes M, N and O are for information only.

# Medical suction equipment —

## Part 1:

## Electrically powered suction equipment — Safety requirements

### 1 Scope

This part of ISO 10079 specifies minimum safety and performance requirements for medical and surgical suction equipment (see Figure 1) for health care facilities such as hospitals, for domiciliary care of patients and for field and transport use.

Although such equipment may be driven by centrally powered piped vacuum systems, compressed gases and electricity, or be manually powered for a variety of applications, this part of ISO 10079 addresses only mains electricity- and battery-powered suction equipment.

NOTE See also annex M in this part of ISO 10079.

ISO 10079-1 is one of a series of International Standards based on IEC 60601-1:1988; in IEC 60601-1 (the "General Standard"), this type of International Standard is referred to as a "Particular Standard". As stated in 1.3 of IEC 60601-1:1988, the requirements of this part of ISO 10079 take precedence over those of IEC 60601-1.

The scope and object given in clause 1 of IEC 60601-1:1988 apply, except that 1.1 shall be replaced by the following:

This part of ISO 10079 is not applicable to:

- a) central power supply (by vacuum/compressed air generation), piping systems of vehicles and buildings, and wall connectors;
- b) catheter tubes, drains, curettes and suction tips;
- c) syringes;
- d) dental suction equipment;
- e) waste gas scavenging systems;
- f) laboratory suction;
- g) autotransfusion systems;
- h) passive urinary drainage;
- i) closed systems for wound drainage;
- j) gravity gastric drainage;
- k) orally operated mucous extractors;
- l) suction equipment where the collection container is downstream of the vacuum pump;
- m) equipment marked as suction unit for permanent tracheostomy;
- n) ventouse (obstetric) equipment;
- o) neonatal mucous extractors;
- p) suction equipment marked for endoscopic use only.

**Key**

- 1 Vacuum indicator
- 2 Filter
- 3 Collection container
- 4 Vacuum regulator

 ISO 10079-1:1999

NOTE 1 This part of ISO 10079 applies to mains electricity- and battery-powered suction equipment. Part 2 of ISO 10079 applies to manually powered suction equipment. Part 3 of ISO 10079 applies to suction equipment powered from a vacuum or pressure source.

NOTE 2 Components illustrated are not necessarily required by this part of ISO 10079.

NOTE 3 Suction equipment shown is an example only, and actual systems may consist of other arrangements and components not illustrated.

**Figure 1 — Schematic drawing of suction equipment**

**2 Normative references**

The following normative documents contain provisions which, through reference in this text, constitute provisions of this part of ISO 10079. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of ISO 10079 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO 3744:1994, *Acoustics — Determination of sound power levels of noise sources — Engineering methods for free-field conditions over a reflecting plane.*

ISO 5356-1:1996, *Anaesthetic and respiratory equipment — Conical connectors — Part 1: Cones and sockets.*

ISO 8836:1997, *Suction catheters for use in the respiratory tract.*

IEC 60079-4:1975, *Electrical apparatus for explosive gas atmospheres — Part 4: Method of test for ignition temperature.*

IEC 60529:1976, *Classification of degrees of protection provided by enclosures.*

IEC 60601-1:1988, *Medical electrical equipment — Part 1: General requirements for safety*; and Amd.1:1991 and Amd.2:1995.

IEC 60651:1979, *Sound level meters.*

IEC 60695-2-2:1980, *Fire hazard testing — Part 2: Test methods — Needle-flame test.*

### 3 Terms and definitions

For the purposes of this part of ISO 10079, the terms and definitions given in clause 2 of IEC 60601-1:1988 apply except that the definition given in 2.1.5 shall be replaced by the following:

#### 2.1.5

##### **applied part**

all parts in the liquid pathway

Add to definition 2.4.3 the following:

#### 2.4.3

##### **safety extra-low voltage SELV**

electrical sources which are isolated (e.g. car battery) and do not require a separate transformer or converter with separate windings

**iTeh STANDARD PREVIEW**  
(standards.iteh.ai)  
<https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17a14a7c/iso-10079-1-1999>

For the purposes of this part of ISO 10079, the following additional terms and definitions apply.

#### 3.1

##### **breast pump**

vacuum pump for the collection of breast milk

#### 3.2

##### **collection container**

container in which liquids and solid particles are collected

#### 3.3

##### **collection container assembly**

collection container and its closure with connectors for suction

#### 3.4

##### **drainage**

removal of fluids from a body cavity or wound

#### 3.5

##### **end-piece**

that part of the suction equipment applied to the patient which begins at the site where material is drawn in and ends at the first detachable connection

NOTE Examples of commonly used end-pieces are a Yanker sucker and a suction catheter.

#### 3.6

##### **exhaust opening**

port or ports through which exhaust is discharged

- 3.7**  
**filter**  
device for retention of particulate matter
- 3.8**  
**free air flow**  
unrestricted flow of air through a designated inlet
- 3.9**  
**high flow suction**  
suction which produces a free air flow of 20 l/min or more
- 3.10**  
**high vacuum**  
vacuum of 60 kPa or more below atmospheric pressure
- NOTE 1 kPa = 7,50 mmHg or 4,02 inchH<sub>2</sub>O or 10,2 cmH<sub>2</sub>O or 10 hPa
- 3.11**  
**inlet**  
port of a component through which fluids and/or solid particles enter
- 3.12**  
**intermediate tubing**  
tubing between the collection container and the vacuum source
- 3.13**  
**intermittent suction**  
type of suction in which the negative pressure applied to the end-piece is automatically and periodically returned to atmospheric pressure
- 3.14**  
**low flow suction**  
suction which produces a free air flow less than 20 l/min
- 3.15**  
**low vacuum**  
vacuum of not more than 20 kPa below atmospheric pressure
- 3.16**  
**medium vacuum**  
vacuum of more than 20 kPa but less than 60 kPa below atmospheric pressure
- 3.17**  
**outlet**  
port of a component through which fluids and/or solid particles exit
- 3.18**  
**overflow protection device**  
system intended to prevent liquid or solid particles from entering the intermediate tubing
- 3.19**  
**suction**  
application of vacuum to remove fluids and/or solid particles
- 3.20**  
**suction tubing**  
tubing for conduction of fluids and/or solid particles between the end-piece and the collection container

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

[ISO 10079-1:1999](https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17ad4a7c/iso-10079-1-1999)

<https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17ad4a7c/iso-10079-1-1999>

**3.21****thoracic drainage**

drainage by application of suction to the thoracic cavity of the patient

NOTE For the purposes of this part of ISO 10079, all thoracic drainage is considered to be active.

**3.22****vacuum**

pressure less than atmospheric pressure

NOTE In this part of ISO 10079, vacuum is expressed as a difference from atmospheric pressure.

**3.23****vacuum indicator**

device for displaying the level of vacuum

**3.24****vacuum pump**

powered device for generating vacuum

**3.25****vacuum regulator**

device for controlling the maximum vacuum applied to the patient

**4 General requirements and general requirements for tests**

The requirements given in clauses 3 and 4 of IEC 60601-1:1988 apply, together with the following additional item:

**4.6 f)** Where reference is made in test methods to tubing, the tubing which is supplied or recommended by the manufacturer shall be used.

<https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17ad4a7c/iso-10079-1-1999>

**5 Classification**

The classification given in clause 5 of IEC 60601-1:1988 applies.

**6 Identification, marking and documents**

The requirements given in clause 6 of IEC 60601-1:1988 apply, with the following additions and modifications:

**6.1 e)** add the following:

The address of the manufacturer, and the name and address of the supplier responsible within the region or country if the supplier is not the manufacturer.

Wherever reasonable and practicable, the device and detachable components shall be identified, where appropriate, in terms of batches, to allow the appropriate action to detect any potential risk posed by the devices and detachable components.

**6.1 f)** add the following:

The equipment shall be marked with a batch or serial number and also year of manufacture, to allow all parts in the functional state to be sufficiently identified to the level that appropriate action can be undertaken if a defect or hazard arises.

Replace **6.1 p)** by the following:

- 1) All equipment generating suction shall be marked with words indicating suction, and with an indication of the available level of vacuum as determined by the manufacturer. This marking shall be visible in the normal working position.

NOTE Equipment including vacuum should be marked with the designation; "high vacuum/high flow", "high vacuum/low flow", "medium vacuum/high flow", "medium vacuum/low flow", "low vacuum/high flow" or "low vacuum/low flow", as appropriate.

- 2) Low vacuum equipment with a level of vacuum which is not adjustable by the user shall be marked either with the level of vacuum which can be attained or with words indicating low vacuum.
- 3) Intermittent suction equipment shall be marked with words indicating intermittent suction. Equipment which can provide both continuous and intermittent suction shall have the mode control clearly marked.
- 4) If there is a single exhaust opening, it shall be marked with words indicating exhaust opening.
- 5) Suction equipment intended for thoracic drainage and complying with 59.8 shall be marked as such.
- 6) The inlet connection to the collection container shall be identified unless misconnection is prevented by a design feature.
- 7) If the suction equipment is intended for use in the field and/or transport and does not comply with 53.1, it shall be marked on the equipment case as not suitable for use at temperatures below ... °C or above ... °C, with the appropriate limiting temperatures marked. If no case is provided, the statement shall be marked on the equipment.

In 6.1, add the following additional items:

aa) Equipment containing a filter which is intended to be cleaned or changed by the user shall have wording clearly marked on the equipment, or on the filter unit, to the effect that the filter should be cleaned or changed in accordance with the manufacturer's recommendations.

ab) The capacity of the collection container.

In 6.3 c), add the following:

If a progressive variation in the degree of vacuum is available, the direction of adjustment to increase vacuum shall be clearly and permanently marked.

In 6.8.1, add the following:

The collection container capacity shall be stated in the accompanying documents.

In 6.8.2 a), add the following:

The instructions for use shall additionally include the following information:

- 1) instructions for operating the vacuum regulator, if supplied, and for setting the required vacuum;
- 2) the size and type of suction tubing recommended for use with the suction equipment and its means of connection to the collection container;
- 3) recommended methods for cleaning and disinfection or sterilization of all applied parts;
- 4) the method for removing the collection container for emptying;
- 5) details of the operation of any overflow protection device fitted to the collection container assembly and the usable capacity of the collection container in all the recommended inclined planes of operation;
- 6) if applicable, the method of controlling frothing in the collection container;

- 7) instructions, if applicable, for the replacement or cleaning of air filters, and for cleaning or sterilization of the filter housing;
- 8) on performance as either
  - i) the type of equipment, e.g. medical suction, high vacuum, high flow,
  - ii) the level of vacuum and flow obtainable,
  - iii) the vacuum and air flow characteristics obtainable from the equipment as required by 6.1 p) 1), 2) or 3), as appropriate.
- 9) instructions to inspect suction tubing, collection containers and any other components that are subject to wear or damage;
- 10) a statement advising removal and servicing of the equipment if liquid or solid has been drawn into the vacuum pump;

NOTE In some cases, this may require servicing by the manufacturer or his authorized agent.

- 11) if applicable, a statement that suction ceases when the overflow protection device operates, and the method of correcting this situation;
- 12) recommendations for cleaning and/or disinfection of the outer casing;
- 13) instructions for cleaning and sterilization or disinfection of reusable suction tubing;
- 14) instructions for sterilizing or disinfecting any part of a filter assembly which is reusable;
- 15) guidance for the intended use and limitations of the equipment, including whether or not the equipment is intended for use within a health care facility, for domiciliary use, or for field and/or transport use.

<https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17ad4a7c/iso-10079-1-1999>

## 7 Power input

The requirements given in clause 7 of IEC 60601-1:1988 apply.

## 8 Environmental conditions

### 8.1 Basic safety categories

Appendix A.1.2 of IEC 60601-1:1988 applies (see Amendment 2).

### 8.2 Removable protective means

Replaced by 6.1 z) of IEC 60601-1:1988.

### 8.3 Environmental conditions

The requirements given in clause 10 of IEC 60601-1:1988 apply, with the following modification.

Replace **10.2.1 a)** with the following:

- a) An ambient temperature range of + 5 °C to + 35 °C.

For field and/or transport use, environmental conditions shall be as specified in 4.10 and clause 10 of IEC 60601-1:1988.

## 8.4 Special measures with respect to safety

Clauses 11 and 12 of IEC 60601-1:1988 are not used.

## 9 Protection against electric shock hazards

### 9.1 General

The requirements given in clause 13 of IEC 60601-1:1988 apply.

### 9.2 Requirements related to classification

The requirements given in clause 14 of IEC 60601-1:1988 apply.

### 9.3 Limitation of voltage and/or energy

The requirements given in clause 15 of IEC 60601-1:1988 apply.

### 9.4 Enclosures and protective covers

The requirements given in clause 16 of IEC 60601-1: 1988 apply, together with the following additional item:

**16 h)** The housing shall be constructed of fire-retarding material which withstands the needle-flame test specified in IEC 60695 2-2 when the flame is applied to any point on the inside or outside surface of the housing for 20 s.

### 9.5 Separation

The requirements given in clause 17 of IEC 60601-1:1988 apply, except as follows:

Replace item **17 c)** by the following:

<https://standards.iteh.ai/catalog/standards/sist/377f73d7-fe4f-4ae7-8a7a-7a6d17ad4a7c/iso-10079-1-1999>

For mains-powered equipment, accessible unearthed conductive parts shall not be connected to any part of the applied part.

Compliance shall be checked by applying the normal operating voltage and frequency between any part of the applied part and accessible unearthed conductive paths.

Leakage current shall not exceed 5 mA for Type B or BF equipment and 0,05 mA for Type CF equipment.

Measurements shall be made with the applied part filled with saline solution containing 9 g/l sodium chloride until the overflow protection device operates or until saline solution emerges from the exhaust opening. For the purposes of the test for Type B or BF equipment, an electrically isolated conductive cap on a collection container is not considered to be part of the accessible unearthed conductive path.

### 9.6 Protective earthing, functional earthing and potential equalization

The requirements given in clause 18 of IEC 60601-1:1988 apply.

### 9.7 Continuous leakage currents and patient auxiliary currents

The requirements given in clause 19 of IEC 60601-1:1988 apply, together with the following addition:

In **19.4 h)**, add the following additional item:

12) Measurement shall be made with any overflow protection device operative. Fluid shall be drawn through a suction catheter immersed in a container filled with saline solution containing 9 g/l sodium chloride, until the overflow protection device operates or until saline solution emerges from the exhaust opening. Measurement shall be made from the saline solution in the container.
