

Designation: B 179 – 03

Standard Specification for Aluminum Alloys in Ingot and Molten Forms for Castings from All Casting Processes¹

This standard is issued under the fixed designation B 179; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope*

1.1 This specification covers commercial aluminum alloys in ingot form for remelting and molten form for the manufacture of castings. The specific gravity of these alloys does not exceed 3.0 and they are designated as shown in Tables 1 and 2.

NOTE 1—Throughout this specification the use of “ingot” in a general sense includes sow, T-bar, T-ingot, and pig.

1.2 Alloy designations are in accordance with ANSI H35.1. The equivalent Unified Numbering System alloy designations are in accordance with Practice E 527.

NOTE 2—Supplementary data pertaining to the alloys covered by this specification when used in the form of castings are given in Specifications B 26/B 26M, B 85, B 108, B 618, and B 686.

1.3 For acceptance criteria for inclusion of new aluminum and aluminum alloys in this specification, see Annex A1.

1.4 The values stated in inch-pound units are to be regarded as the standard.

H35.1 Alloy and Temper Designation Systems for Aluminum²

3. Ordering Information

3.1 Orders for material under this specification shall include the following information:

3.1.1 This specification designation (which includes the number, the year, and the revision letter, if applicable),

3.1.2 Alloy (Section 6, Tables 1 and 2), and

3.1.3 The quantity in pieces or pounds.

¹ This specification is under the jurisdiction of ASTM Committee B07 on Light Metals and Alloys and is the direct responsibility of Subcommittee B07.01 on Aluminum Alloy Ingots and Castings.

Current edition approved April 10, 2003. Published September 2003. Originally approved in 1946. Last previous edition approved in 1996 as B 179 – 96.

*A Summary of Changes section appears at the end of this standard.

TABLE 1 Chemical Composition Limits for Alloys Normally Used in Sand and Permanent Mold Casting Processes

NOTE 1—Where single units are shown, these indicate the maximum amounts permitted.

NOTE 2—Analysis shall be made for the elements for which limits are shown in this table.

NOTE 3—The following applies to all specified limits in this table: For purposes of determining conformance to these limits, an observed value or a calculated value obtained from analysis shall be rounded to the nearest unit in the last right-hand place of figures used in expressing the specified limit in accordance with the rounding-off method of Practice E 29.

TABLE 1 Continued

Alloy ^A		Use ^B	Composition, %												Aluminum
ANSI ^A	UNS		Silicon	Iron	Copper	Manganese	Magnesium	Chromium	Nickel	Zinc	Tin	Titanium	Others ^C		
													Each	Total ^D	
852.1 ^F	A08521	S,P	0.40	0.50	1.7–2.3	0.10	0.7–0.9	...	0.9–1.5	...	5.5–7.0	0.20	...	0.30	remainder

^A ASTM alloy designations are recorded in Practice B 275.

^B S = sand cast. P = permanent mold cast.

^C "Others" includes listed elements for which no specific limit is shown as well as unlisted metallic elements. The producer may analyze samples for trace elements not specified in the specification. However, such analysis is not required and may not cover all metallic "Others" elements. Should any analysis by the producer or the purchaser establish that an "Others" element exceeds the limit of "Each" or that the aggregate of several "Others" elements exceeds the limit of "Total," the material shall be considered nonconforming.

^D Other Elements—Total shall be the sum of unspecified metallic elements 0.010 % or more, rounded to the second decimal before determining the sum.

^E Silver 0.40–1.0 %.

^F 336.1 formerly A332.1, 336.2 formerly A332.2, 332.1 formerly F332.1, 332.2 formerly F332.2, 513.2 formerly A514.2, 710.1 formerly A712.1, 711.1 formerly C712.1, 712.2 formerly D712.2, 851.1 formerly A850.1, 852.1 formerly B850.1.

^G If iron exceeds 0.45 %, manganese shall not be less than one half of the iron content.

^H Beryllium 0.04–0.07 %.

^I Beryllium 0.003–0.007 %, boron 0.002 % max.
