UVOD

Standard SIST EN 982, Varnost strojev - Varnostne zahteve za fluidne sisteme in njihove komponente - Hidravlika, prva izdaja, 1998, ima status slovenskega standarda in je z metodo platnice prevzet evropski standard EN 982, Safety of machinery - Safety requirements for fluid power systems and their components - Hydraulics, 1996.

NACIONALNI PREDGOVOR

Evropski standard EN 982:1996 je pripravil tehnični odbor Evropske organizacije za standardizacijo CEN/TC 114 Safety of machinery. Nacionalni dodatek je pripravil tehnični odbor USM/TC VSN Varnost strojev in naprav.

Ta slovenski standard je dne 1998-11-16 odobril direktor USM.

ZVEZE S STANDARDI

S prevzemom tega evropskega standarda veljajo naslednje zveze:

SIST EN 292-1	Varnost strojev - Osnovni pojmi, splošna načela načrtovanja - 1. del: Osnovna terminologija, metodologija
SIST EN 292 -2	Varnost strojev - Osnovni pojmi, splošna načela načrtovanja - 2. del: Tehnična načela in specifikacije
SIST EN 418	Varnost strojev - Oprema za izklop v sili - Funkcionalni vidiki, načela načrtovanja
SIST EN 954-1	Varnost strojev - Krmilni sistemi v zvezi z varnostjo - 1. del: Osnovna načela načrtovanja
SIST EN 1050	Varnost strojev - Načela za oceno negotovanja
SIST EN 1070	Varnost strojev - Terminologija

ITEH STANDARD PREVIEW

OSNOVA ZA IZDAJO STANDARDA

- Slovenski standard SIST EN 982 je z metodo platnice prevzet evropski standard EN 982:1996, kot nacionalni dodatek pa je dodan slovenski prevod 3. poglavja - Definicije

OPOMBE

- Povsod, kjer se v besedilu standarda uporablja izraz "evropski standard", v SIST EN 982:1998 to pomeni "slovenski standard".
- Uvod in nacionalni predgovor nista sestavni del standarda.

Nacionalni dodatek

(informativni)

Prevod 3. poglavja: Definicije

Pri uporabi tega standarda se uporablajo spodaj navedene definicije pojmov in tiste, ki so navedene v EN 1070. Druge definicije, ki se nanašajo na predmet standarda in niso tukaj navedene, so v ISO 5598.

3.1 Fluidna tehnika: Področje tehnike, ki obravnava načine prenosa, pretvarjanja, krmiljenja toka energije in informacije s fluidom pod tlakom.

3.2 Sistem: Skupek med seboj povezanih enot in sklopov za prenos, pretvarjanje in krmiljenje toka energije (moči).

3.3 Sklop: Osnovna enota fluidnotehničnega sistema, ki je sestavljena iz več med seboj povezanih delov in opravlja eno od osnovnih funkcij prenosa, pretvarjanja ali krmiljenja toka energije ali informacije oziroma delovnega medija (na primer valj, motor, ventil, filter).

3.4 Pnevmatika: Tehniška veda, ki obravnava značilne lastnosti in uporabo stisnjenega zraka ali nevtralnih plinov, kot delovni medij za pogon in krmiljenje strojev.

3.5 Najvišji delovni tlak: Najvišji tlak, pri katerem sistem ali njegov del lahko deluje pri ustaljenem stanju.
iTeh STANDARD PREVIEW

3.6 Nazivni tlak: Najvišji tlak (zaokrožen na standardno vrednost), pri katerem sklop lahko deluje ob zahtevani zmogljivosti in trajnosti.

3.7 Ukazni mehanizem: Naprava, ki zagotavlja vhodni signal krmilne enote (na primer odmičnik, tipka, stikalo, prekrmilni tlak).
[SIST EN 982-1998](http://standards.iteh.ai/catalog/standards/sist/e553d692-4c55-49fe-afaa-b813672b5670/sist-en-982-1998)

standards.iteh.ai/catalog/standards/sist/e553d692-4c55-49fe-afaa-b813672b5670/sist-en-982-1998

3.8 Krmilni mehanizem: Naprava, ki zagotavlja vhodni signal sklopa (na primer vzvod, elektromagnet, krmilni ventil).

3.9 Pogonski del: Sklop, ki energijo fluida pretvarja v mehansko delo (na primer motor, valj).

3.10 Cevovod: Sestav togih in/ali gibkih cevi, cevnih priključkov, cevnih spojk in druge cevne armature, ki omogoča povezavo med sklopi.

EUROPÄISCHE NORM

April 1996

ICS 23.100.00

Descriptors: hydraulic fluid power, hydraulic transmission, hydraulic equipment, directional control valves, fluid circuits, components, safety, accident prevention, hazards, design, equipment specifications, protection, verification, marking

English version

**Safety of machinery - Safety requirements for
fluid power systems and their components -
Hydraulics**

Sécurité des machines - Prescriptions de sécurité relative aux systèmes et leur composants de transmissions hydrauliques et pneumatiques - Hydraulique

Sicherheit von Maschinen - Sicherheitstechnische Anforderungen an fluidtechnische Anlagen und deren Bauteile - Hydraulik

This European Standard was approved by CEN on 1996-03-09. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 114 "Safety of machinery", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 1996, and conflicting standards shall be withdrawn at the latest by October 1996.

This European Standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Directive(s).

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

It was developed to contribute towards unification of safety regulations and procedures in the various member countries for each aspect dealt within the field of hydraulics for fluid power systems and their components. This Standard utilizes the most recently validated technical information from established technical sources (e.g. CEN, ISO, national standards and European documents).

0 Introduction

This standard is a type B2 standard (according to EN 292-1) and contains the general requirements for hydraulic systems and their components on machinery. For type C standard makers, it is a basis for the development of specific requirements on dedicated machines. If no type C standards are available, it is a basis for the manufacturers when constructing machines that include hydraulic systems and their components.

In developing this standard, safety related requirements out of ISO 4413 were selected as well as additional safety related requirements.

Equivalent safety requirements for pneumatic systems are defined in EN 983 "Safety of machinery - Safety requirements for fluid power systems and their components - Pneumatics".

iTeh STANDARD PREVIEW 1 Scope

(standards.iteh.ai)

This standard applies to hydraulic systems and their components on machinery. It identifies hazards and factors which affect the safety of ~~systems and their components~~ when they are put to their intended use.

<https://standards.iteh.ai/catalog/standards/sist/e553d692-4c55-49fe-afaa-b813672b5670/sist-en-982-1998>

The principles specified apply to the design, construction and modification of new systems and their components and aspects of use including:

- assembly
- installation
- adjustment
- operation
- cleaning
- maintenance.

Components are covered in the standard but only to the extent that safety requirements are given to allow the components to be safely integrated into a system's design.

The standard applies to systems and their components on machinery that are manufactured after the date of the adoption of this standard.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references, the latest edition of the publication referred to applies.

3 Definitions

For the purpose of this standard, the definitions of ENV 1070 and the following apply. Other definitions not included are given in ISO 5598.

3.1 fluid power: The means whereby signals and energy can be transmitted, controlled and distributed using a pressurized fluid as the medium.

3.2 system: Arrangement of interconnected components which transmits and controls fluid power energy.

3.3 component: An individual unit (e.g. cylinder, motor, valve, filter) comprising one or more parts designed to be a functional part of a fluid power system.

3.4 hydraulics: Science and technology which deals with the use of a liquid as the fluid power medium.

3.5 maximum working pressure: The highest pressure at which the system or part of the system is intended to operate in steady-state conditions.

3.6 rated pressure: The highest pressure at which the component is intended to operate for a number of repetitions sufficient to assure adequate service life.

3.7 operating device: Device that provides an input signal to a control mechanism (e.g. cam, switch).

3.8 control mechanism: A device that provides an input signal to a component (e.g. lever, solenoid).

3.9 actuator: Component that transforms fluid energy into mechanical energy (e.g. motor, cylinder).

3.10 piping: Any combination of fittings, couplings or connectors with pipes, hoses or tubes which allows fluid flow between components.

4 List of hazards

The possible hazards associated with the use of hydraulic power in a machine are given in table 1:

Table 1: List of hazards

Hazard type	Relevant clauses			Relevant type B standard or clause in this standard
	EN 292-1: 1991	EN 292-2: 1991	Annex A of EN 292-2: 1991	
4.1 Mechanical hazards - shape - relative location - mass and stability (potential energy of elements) - mass and velocity (kinetic energy of elements) - inadequacy of the mechanical strength - accumulation of potential energy by: - elastic elements (springs), or - liquids or gases under pressure, or - vacuum - leakage	4.2		1.3, 1.4, 1.3.7	5.1.1, 5.1.2, 5.1.3, 5.1.5 5.1.7, 5.2.1, 5.2.2, 5.2.3, 5.3.1, 5.3.2, 5.3.3, 5.3.4.2, 5.3.4.3, 5.3.4.4, 5.3.4.5, 7.2, 7.3.1
4.2 Electrical hazards				5.1.6, 5.2.1, 5.3.3.3.2 a, EN 60204-1
4.3 Thermal hazards resulting in burns and scalds, by a possible contact of persons, by flames or explosions and also by the radiation of heat sources				5.1.9, 5.1.10, 5.2.1, 5.3.4.6,
4.4 Hazards generated by noise				5.1.8, 5.2.1
4.5 Hazards, especially unintended movements, caused by electromagnetic fields		3.7.11	1.5.10, 1.5.11	EN 50081-2, prEN 50082-2
4.6 Hazards generated by materials and substances processed, used and exhausted by machinery			1.5.13	
4.6.1 Hazards resulting from contact with or inhalation of harmful fluids, gases, mists, fumes and dusts				5.3.2.6, 7.1, 7.2
4.6.2 Fire or explosion hazards	SIST EN 982-1998			5.2.1, 5.3.4.1
