5.3.2 Determination of grain size distribution

Replace the first paragraph with:

The principle of this part of ISO 6344 upon which the evaluation of the test results obtained by sedimentation for the 3 %-, 50 %- and 95 %-points is based, is the comparison of the median (50 %) size determined in an ISO round robin test on the micro-P-mastergrits P1500, P2000 and P2500 of MPA Darmstadt with that determined by the testing laboratory on its own instruments.
