## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 18773 was prepared by Technical Committee ISO/TC 68, *Banking, securities and other financial services*, Subcommittee SC 4, *Securities and other related financial instruments*.

## Introduction

This International Standard is intended for use in any application in the trading and administration of securities in international securities business. In so far as the trading and the administration of securities do not affect other countries, the application of this International Standard remains at the discretion of the responsible national bodies, such as stock exchanges, banks, brokers, CSD's and other institutions active in the securities industry.

Like ISO 18774 the application of this standard is specifically valuable for a wide range of securities processing functions, including: customer statements, confirmations, bank reporting, valuation pricing services and clearing/settlement activities.

The abbreviation of securities terms has been primarily developed to provide the necessary components building the Financial Instrument Short Name (see ISO 18774). However, these abbreviations can be adequately used in any securities business environment and in conjunction with any other data structures.

Abbreviations of securities terms and company names are widely used in and beyond the financial sector. ISO 18773 provides the principles for the maintenance of company short names. Company names are especially used in relation to financial instruments. To provide consistency in the information flows linked to the securities business processes, it is necessary to use a unique issuer short name. This allows also consistency among the Financial Instrument Short Names of different instruments under the same issuer. On the other hand, the company short names can be used independently of the role which an institution plays with regard to a specific financial instrument, i.e. Custodian, Central Securities Depository, Guarantor, Paying Agent, etc.

The same principle applies to the abbreviation of securities terms.

The uniformity of the abbreviations used in the securities processes allow improving the clarity of the data exchanged among market-players and contribute to the prevention of misinterpretations and errors. In addition, it will make the maintenance of proprietary tables by the individual institutions superfluous.

# Securities and related financial instruments - Abbreviations

## 1 Scope

This international standard provides abbreviations of securities terms and issuer names. It aims to harmonize existing market practices, which are in use on a national and individual entity level. It covers potentially all data elements involved in the securities business processes.

## 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 6166, Securities - International securities identification numbering system (ISIN).

ISO 10962, Classification of financial instruments

ISO 15022, Data Field Dictionary

ISO 18774, Securities – Financial Instrument Short Names

<https://standards.iteh.ai/catalog/standards/sist/85a36dd9-e155-4efe-9559-217a499f33cd/iso-dis-18773>

## 3 Conventions and principles

According to the FISN structure, the issuer short names have a maximum of 15 alphanumerical characters. However, the short name can be shorter than 15 characters, especially when an acronym exists for the involved company. In this case, the acronym will be used (for instance « IBM », « UBS », etc.) as the issuer short name.

This standard provides the principles for building and maintaining issuer short names but does not provide the exhaustive list of the issuer names. In order to ensure dynamic and timely maintenance, an Issuer Short Name Directory will be constantly updated by the maintenance agency (see paragraph 5 below), and therefore be kept outside the standard itself.

**NOTE** The issuer short name shall be assigned upon issuance of the related financial instrument together with the ISIN (ISO 6166) and the CFI (ISO 10962); it should be updated to reflect any change in the involved attributes of the financial instrument.

## 4 Terms and definitions

### 4.1 For the purposes of this document, Issuer Short Name

The issuer short name is an abbreviation of the official issuer name, limited to a maximum of 15 digits. It will be maintained in the same language as the official full name of the company. Where the company is registered under names with different languages, the directory should provide all language versions. Only supranational organizations will be exclusively maintained in English.

## 4.2 Abbreviation of terms

All terms used in the securities business processes, specifically in bank reports, pricing, instructions, event notifications, etc. are in the scope of the present standard. The abbreviation of terms will be maintained in the central directory in 5 languages: English, French, German, Spanish and Italian.

## 5 Registration Authority

In accordance with the provision of annex N of Part 1 of the IEC/ISO Directives, the ISO Council has designated the Association of National Numbering Agencies (ANNA S.C.) as the Registration Authority for this International Standard.

### 5.1 Issuer Short Names

The Issuer Short Name shall be allocated and maintained by the Association of Numbering Agencies (ANNA) along with the ISIN (International Security Identification Number) as defined in ISO 6166

### 5.2 Abbreviation of terms

A glossary of terms will be maintained by the Association of National Numbering Agencies.

### 5.3 Application for Issuer Short Names

Applications for the allocation of Issuer Short Names may be submitted to ANNA:

NOTE It is recommended that the lead manager/issuing agent apply for allocation of the FISN when applying for allocation of the ISIN prior to the launching of the issue. For existing issues any professional in the security business may apply.
