This European Standard was approved by CEN on 13 October 2007 and includes Amendment 1 approved by CEN on 14 March 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, bithuania, buxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 378-2:2008+A1:2009) has been prepared by Technical Committee CEN/TC 182 "Refrigerating systems, safety and environmental requirements", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2009, and conflicting national standards shall be withdrawn at the latest by December 2009.

This document includes Amendment 1, approved by CEN on 2009-03-14.

This document supersedes (A) EN 378-2:2008 (A).

The start and finish of text introduced or altered by amendment is indicated in the text by tags A_1 A_2 .

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of the EU Directive(s).

For relationship with EU Directive(s), see informative Annexes ZA, ZB and ZC, which are integral parts of this document. (A) Teh STANDARD PREVIEW

EN 378 consists of the following parts under the general title *Refrigerating systems and heat pumps* — *Safety and environmental requirements*:

- Part 1: Basic requirements, definitions, classification and selection criteria
- Part 2: Design, construction, installing, testing, marking and documentation
- Part 3: Installation site and personal protection
- Part 4: Operation, maintenance, repair and recovery

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

The introduction of EN 378-1:2008 is applicable.

This standard is a type C standard as stated in EN ISO 12100.

The machinery concerned and the extent to which hazards, hazardous situations and hazardous events are covered are indicated in the scope of this standard.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope

This European Standard is applicable to the design, construction and installing of refrigerating systems including piping, components and materials and including ancillary equipment directly associated with such systems. It also specifies requirements for testing, commissioning, marking and documentation. In case the heat transfer fluid is not gaseous at atmospheric pressure, the requirements for circuits for heat transfer fluids are excluded except for any safety devices associated with the refrigerating system. It is not applicable to refrigerating systems with air or water as refrigerant and does not cover the requirements for equipment to be used in a potentially explosive atmosphere.

The following ancillary equipment includes:

- fan and fan motor;
- electrical motor and transmission for open compressor systems.

This European Standard specifies the requirements relating to stationary and mobile refrigerating systems of all sizes, including heat pumps.

Systems using refrigerants other than those listed in Annex E of EN 378-1:2008 are not covered by this standard as long as a safety class is not assigned.

Basic safety requirements for refrigerating systems as defined in EN 378-1 are applicable for this standard.

Basic requirements for the installation site as defined in EN 378-3 apply.

This European Standard is not applicable to refrigeration systems and heat pumps which are manufactured before the date of its publication as EN.

3 Terms, definitions, designations, classification and abbreviations

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 378-1:2008 apply.

3.2 Designations and classification

Designation and classification of the refrigerant such as:

- refrigerant number, e.g. R 717 and
- safety groups A1, A2, A3, B1, B2, B3

are specified in EN 378-1:2008) Annex ANDARD PREVIEW

3.3 Abbreviations

(standards.iteh.ai)

DN	Nominal size (see EN 378-1-2008, 3.5.17)
PS PS	Maximum allowable pressure in bar (1 bar = 0,1 MPa) (see EN 378-1:2008, 3.3.2)
LFL	Lower flammability limit in kg/m ³

4 Significant hazards

The list of significant hazards related to the Machinery Directive is given in Annex D.

5 Safety requirements and/or measures

5.1 General safety and/or environmental requirements

5.1.1 General

Safety and environmental requirements are specified in 5.2 and Clause 6.

Refrigerating appliances complying with the product standards such as

- EN 60335-2-40 for electrical heat pumps, air-conditioners and dehumidifiers,
- EN 60335-2-24 for refrigerating appliances, ice-cream appliances and ice-makers and
- EN 60335-2-89 for commercial refrigerating appliances with an incorporated or remote refrigerant condensing unit or compressor

are in compliance with this European Standard up to and including category I as determined in Annex B. For refrigerating appliances of category II and higher, as determined in Annex B, the relevant requirements for pressure safety in 5.2 and Clause 6 apply.

5.1.2 Hazards to persons, property and environment

Refrigerating systems and components shall be designed and constructed with the intention to eliminate possible hazards to persons, property and the environment. Deliberate discharge of refrigerants shall only be permitted in a manner which is not harmful to persons, property and the environment and in accordance with national laws.

5.2 Safety requirements for components and piping

5.2.1 General requirements

Components and piping shall comply with the related standards or requirements as indicated in Table 1. Requirements for components not included in Table 1 and which are below category II as defined in B.5 are indicated in 5.3.

Where the product standards for components or piping are not harmonised for the EC provisions in relation to pressure or if the essential requirements of such provisions are not covered then, if relevant, compliance of such components or piping shall be proved and by risk assessment assure that the relevant requirements for pressure are met.

If the relevant standards for those components listed in Table 1 does not cover requirements for electrical safety, than the electrical parts/ systems of these components shall fulfil the requirements for electrical safety as defined in EN 60335-2-40, EN 60335-2-24, EN 60335-2-89 or EN 60204-1 as relevant.

If the component contains electrical components, and if the component standard does not cover electrical safety, then the component shall fulfil the electrical requirements of EN 60335-2-40, EN 60335-2-24, EN 60335-2-89 or EN 60204-1 as relevant.

NOTE Components that are declared to comply with the relevant directives using a method alternative to the above standards also comply with the requirements of this standard.

5.2.2 Specific requirements

5.2.2.1 General

In addition to the requirements of 5.2.1, following requirements are applicable for incorporation of specific components and piping into the refrigerating system.

5.2.2.2 Tightness

If no test procedure is specified in the component standard, the tightness shall be assured by testing using a test method appropriate for the component and refrigerant, for details see 6.3.4.

When required, some or all tests may be executed on the assembly (refer to 6.3).

Tightness tests shall be conducted only after the component has passed a strength pressure test or has been verified by a type test.

NOTE For guidance refer also to EN 1779:1999.

5.2.2.3 Piping joints

Joints shall be designed so that they will not be damaged due to the freezing of water on the outside. They shall be suitable for the pipe, the piping material and the pressure, temperature and fluid.

Coated (e.g. galvanized) pipes shall not be welded, unless all coating has been completely removed from the joint area. Welded joints shall be suitably protected.

5.2.2.4 Fusible plugs

https://standards.iteh.ai/catalog/standards/sist/c97bb5e7-5d8c-49c8-a1fe-1f246a258e95/sist-en-378-2-2008a1-2009

The nominal melting temperature and work pressure of the fusible material shall be stamped on the non-fusible portion of the plug.

5.2.2.5 Refrigerant liquid pumps

Refrigerant liquid pumps shall be provided with the following information as a minimum, which shall be durable and permanently affixed:

- a) manufacturer;
- b) type designation;
- c) serial number;
- d) year of manufacture;
- e) design pressure or maximum allowable pressure (PS).

5.3 Miscellaneous components

5.3.1 Materials

5.3.1.1 General

The material of the component shall be suitable for the intended temperature and pressure range and in combination with refrigerating systems and heat pumps as specified by the manufacturer of the refrigerant systems and heat pumps. The relevant standards have to be considered.

Restrictions for use of dangerous or hazardous substances and preparations shall be taken into account.

NOTE For example as required in 76/769/EC ("dangerous substances") and 2002/95/EC (RoHS).

5.3.1.2 Ferrous materials

The material of the component shall be suitable for the specified temperature and pressure range and combination with the refrigerants applicable for that part.

a) Cast iron and malleable iron

Cast iron and malleable iron shall only be used, when suitable for the particular application in accordance with the requirements of this standard.

NOTE 1 Since some grades of cast iron are brittle, their application/is dependent on temperature/stress/design considerations.

NOTE 2 Malleable iron has two general classifications with several different grades in each. These can have very different mechanical properties.

SIST EN 378-2:2008+A1:2009

b) Steel, cast steel, cast steel, cast steel and low allow steet is/sist/c97bb5e7-5d8c-49c8-a1fe-1f246a258e95/sist-en-378-2-2008a1-2009

Steel, cast steel, carbon steel and low alloy steel may be used for all parts carrying refrigerant and also for heat transfer medium circuits. Where there is a combination of low temperatures and high pressure and/or where corrosion risks and/or thermal stresses are present, steel with adequate impact strength shall be used paying regard to thickness, the lowest operating temperature and its welding properties.

c) High alloy steel

High alloy steel may be required where there is a combination of low temperatures and high pressure and/or where corrosion risks and/or thermal stresses are present. The impact strength shall be adequate for the particular duty and the material suitable for welding, if required.

d) Stainless steel

When using stainless steel, care shall be taken to ensure that the grade of stainless steel is compatible with the process fluids and possible atmospheric impurities, e.g. sodium chloride (NaCl), sulphuric acid (H_2SO_4).

5.3.1.3 Non-ferrous materials and their alloys (cast, forged, rolled and drawn)

The material of the component shall be suitable for the specified temperature and pressure range and combination with the refrigerants applicable for that part.

a) Copper and copper alloys

Copper in contact with refrigerants shall be oxygen-free or de-oxidized (refer to EN 12735-1 and EN 12735-2).

Copper and alloys with a high percentage of copper shall not be used for parts carrying R717 unless their compatibility has been proved by test or experience.
