EN 13001-1:2004+A1:2009/AC:2009 (E)

1 Modifications to 3.2, Symbols and abbreviations

Add the following symbol " α ," in Table 1 to read:

" $\alpha, \alpha_1, \alpha_2$ Angles between horizontal line and lines of constant N in the σ_a - σ_m -plane".

Delete the following symbol and description in Table 1:

" μ, μ_1, μ_2 Rises of lines of constant N in the σ_a - σ_m -plane".

2 Modifications to 4.4.3, Transformation of the identified stress cycles into cycles with constant mean stress or constant stress ratio

Replace the 1th sentence with:

"Fatigue strengths are usually presented for constant mean stresses σ_m (usually $\sigma_m = 0$) or constant stress ratio $R = \sigma_l / \sigma_u$ (usually $R = -1$ or 0).".

Replace the existing Equation (10) with: "

$$\sigma_a(R) = \frac{\sigma_{a,i} + tg\alpha \cdot \sigma_{m,j}}{1 + tg\alpha \cdot \frac{1+R}{1-R}}$$

iTeh STANDARD PREVIEW
(standards.iteh.ai)

".

Replace the existing Equation (11) with: [SIST EN 13001-1:2005+A1:2009/AC:2010](http://standards.iteh.ai/catalog/standards/sist/f85614b7-3ccf-4f90-99b3-bbe83dd1c57c/sist-en-13001-1-2005a1-2009-ac-2010)

$$\sigma_a(\sigma_m) = \sigma_{a,i} + tg\alpha \cdot (\sigma_{m,j} - \sigma_m)$$

".

Replace the existing Equation (12) with: "

$$tg\alpha = tg\alpha_1 = \frac{\sigma_a(R=-1)}{\sigma_a(R=0)} - 1$$

".

Replace the existing Equation (13) with: "

$$\operatorname{tg} \alpha = \operatorname{tg} \alpha_2 = 1 - \frac{\sigma_a(R = -1)}{\sigma_a(R = \infty)}$$

".

Replace the meaning of the equation with:

"where

- $\sigma_{a,i}$ is the stress amplitude of range i resulting from "rainflow counting" (see Figure 6);
- $\sigma_{m,j}$ is the mean stress of range j resulting from "rainflow counting" (see Figure 6);
- $\sigma_a(R)$ is the transformed stress amplitude for constant stress ratio;
- $\sigma_a(\sigma_m)$ is the transformed stress amplitude for constant mean stress;
- R is the constant stress ratio selected for one-parameter classification of stress cycles;
- σ_m is the constant mean stress selected for one-parameter classification of stress cycles;
- α_1, α_2 are the angles between the horizontal line and the lines of constant N in the σ_a - σ_m -plane (see Figures 7 and 8),

NOTE If the mean stress σ_m is assumed not to be decisive (e.g. for welded structures), $\alpha_1 = \alpha_2 = 0$.

- N is the number of stress cycles to failure by fatigue for the stress cycle described by $\sigma_{a,i}$ and $\sigma_{m,j}$;
 $\sigma_a(R = -1)$,
 $\sigma_a(R = 0)$,
 $\sigma_a(R = \infty)$ are the stress amplitudes, in dependence on the specified stress ratio R and number of cycles N , for which failure by fatigue occurs."

Replace the sentence above Figure 7 with:

"The relationship between stress amplitudes to failure by fatigue and mean stress or stress ratio for the component under consideration for fatigue assessment is shown in Figure 7."
