This European Standard was approved by CEN on 28 December 2007 and includes Amendment 1 approved by CEN on 20 July 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

EN 15283-2:2008+A1:2009 (E)**Foreword**

This document (EN 15283-2:2008+A1:2009) has been prepared by Technical Committee CEN/TC 241 "Gypsum and gypsum based products", the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2010, and conflicting national standards shall be withdrawn at the latest by February 2010.

This document includes Amendment 1, approved by CEN on 2009-08-19.

This document supersedes EN 15283-2:2008.

The start and finish of text introduced or altered by amendment is indicated in the text by tags $\boxed{A_1}$ $\boxed{A_1}$.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This standard includes two parts:

— *Part 1: Gypsum boards with mat reinforcement*

— *Part 2: Gypsum fibre boards*

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Directive 89/106.

For relationship with EU Directive(s) see informative Annex ZA which is an integral part of this document.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

<https://standards.iteh.ai/catalog/standards/sist/de143488-f4f4-41fa-85ba-89858ca418de/sist-en-15283-2-2008a1-2009>

Introduction

Gypsum fibre boards are composed of set gypsum plaster core reinforced with fibres which may be inorganic and/or organic, dispersed in the core to form flat rectangular boards. Admixtures and fillers may also be present. They are usually continuously produced on an industrial scale.

The properties of gypsum fibre boards make them particularly suitable for use in situations where there are requirements for fire protection, sound, thermal insulation or shear strength.

Gypsum fibre boards may be fixed by various methods e.g. nailing, screwing, stapling or sticking with gypsum based or other adhesives. They may also be inserted in a suspended ceiling system or laid in floor constructions.

Gypsum fibre boards may be finished with direct surface decoration or gypsum plaster.

They may be further processed into a range of other products.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 15283-2:2008+A1:2009](https://standards.iteh.ai/catalog/standards/sist/de143488-f4f4-41fa-85ba-89858ca418de/sist-en-15283-2-2008a1-2009)

<https://standards.iteh.ai/catalog/standards/sist/de143488-f4f4-41fa-85ba-89858ca418de/sist-en-15283-2-2008a1-2009>

EN 15283-2:2008+A1:2009 (E)**1 Scope**

This European Standard specifies the characteristics and performance of gypsum fibre boards intended to be used in building construction works including those intended for secondary manufacturing operations. It includes boards designed to receive either direct surface decoration or gypsum plaster.

Gypsum fibre boards are selected for use according to their type, size, thickness and edge profile. The boards may be used for example, to provide dry lining finishes to walls, to fixed and suspended ceilings, to partitions, or as cladding to structural columns and beams. Other uses may be for floors and sheathing applications.

This European Standard covers the following product performance characteristics: reaction to fire, water vapour permeability, flexural strength, and thermal resistance.

The following performance characteristics are linked to systems assembled with gypsum fibre boards: shear strength, fire resistance, impact resistance, direct airborne sound insulation, acoustic absorption. If required, tests have to be done according to the corresponding European test methods on assembled systems simulating the end use conditions.

This European Standard also covers additional technical characteristics that are of importance for the use and acceptance of the product and the reference tests for these characteristics.

It provides for evaluation of conformity of the product to this EN.

This European Standard does not cover gypsum fibre boards that have been subject to any secondary manufacturing operations (e.g. insulating composite panels, boards with thin lamination etc.).

Products covered by EN 520 or EN 13815 are excluded.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

gypsum fibre boards

gypsum fibre boards are composed of set gypsum plaster reinforced with dispersed fibres, which may be inorganic and/or organic, to form flat rectangular boards. They may contain additives and/or fillers to impart additional properties. The surfaces may vary according to the use. The edges and the ends may be profiled to suit the application.

Gypsum fibre boards are usually continuously produced on an industrial scale.

For the purposes of identification these boards receive the designation GF

3.2 Additional features of gypsum fibre boards

3.2.1

gypsum fibre boards with reduced water absorption rate

gypsum fibre boards may have additives to reduce the water absorption rate which make them suitable for special applications in which reduced water absorption properties are required to improve the performance of the board. For the purposes of identification these boards receive the additional designation GF-H

3.2.2

gypsum fibre boards with reduced surface water absorption

gypsum fibre boards may have additives to reduce the surface water absorption which make them suitable for special applications in which reduced water absorption properties are required to improve the performance of the board. For the purposes of identification, these boards receive the additional designation GF-W1, GF-W2 with different surface water absorption performance

3.2.3

gypsum fibre boards with enhanced density

boards may have enhanced density for special applications. For the purposes of identification these boards receive the additional designation GF-D, in accordance with their density

3.2.4

gypsum fibre boards with enhanced surface hardness

boards may have enhanced surface hardness for special applications. For the purposes of identification these boards receive the additional designation GF-I

EN 15283-2:2008+A1:2009 (E)**3.2.5****gypsum fibre boards with enhanced strength**

boards for special applications where increased strength are required have increased bending strengths. For the purposes of identification these boards receive the additional designation GF-R1, GF-R2 with different strength performance

3.3 General terms**3.3.1****edge**

longitudinal side of the board

3.3.2**end**

side transverse to the edges

3.3.3**face**

surface intended to be exposed in use

3.3.4**back**

surface opposite to the face

3.3.5**width**

shortest distance between the edges of the board

3.3.6**nominal width (w)**

width stated by the manufacturer

3.3.7**length**

shortest distance between the ends of the board

3.3.8**nominal length (l)**

length stated by the manufacturer

3.3.9**thickness**

distance between the face and the back, excluding edge profiles

3.3.10**nominal thickness (t)**

thickness stated by the manufacturer

3.3.11**squareness (s)**

rectangularity of the board

3.4 Edge and end profiles of gypsum fibre boards

The edges or ends of gypsum fibre boards are square, tapered, bevelled, half-rounded, rounded, skewed, or tongue and grooved, or a combination of each.

Other types of profile may be produced for special applications.

3.5 Symbols and abbreviations

For the purpose of simplification in product marking and performance information characteristics may be identified through the symbols and abbreviations given in Table 1.

Table 1 — Symbols and abbreviations

Requirement	Sub-clause	Symbol or abbreviation
Reaction to fire	4.2.1	R2F
Shear strength	4.1.1	↑↓
Water vapour resistance factor	4.4	μ
Thermal conductivity	4.5	λ
Fire resistance	4.2.2	FR
Impact resistance	4.12	→I
Flexural strength	4.1.2	F
Acoustic absorption	4.3.2	α
Sound insulation	4.3.1	R
See literature		 www.company.com

iTeh STANDARD PREVIEW (standards.iteh.ai)

4 Requirements

4.1 Mechanical characteristics

SIST EN 15283-2:2008+A1:2009

<https://standards.iteh.ai/catalog/standards/sist/de143488-f4f4-41fa-85ba-89856ca418dc/sist-en-15283-2-2008a1-2009>

4.1.1 Shear strength (strength of bond/substructure connection)

When the intended use of gypsum fibre boards is stiffening building assemblies (i.e. walls, partitions, roof truss structures) the conventional shear strength of the boards shall be determined in accordance with the test method described in 5.12. (It should be noted that this test does not measure the actual shear strength of the board but rather the strength of the board/substructure connection that is the relevant property for this application)

4.1.2 Flexural strength

4.1.2.1 The flexural strength is expressed as bending strength in Newtons per square millimetre.

4.1.2.2 The bending strength of gypsum fibre boards determined as described in 5.6, shall not be less than the values given below.

The bending strength shall be 5,5 N/mm² for all thicknesses below 18 mm. For boards of 18 mm and above it shall be 5,0 N/mm².

In addition, no individual result shall be more than 10 % below these values.

4.1.2.3 Bending strength of gypsum fibre boards with enhanced strength (types GF-R1 and GF-R2).

The bending strength shall be at least 8,0 N/mm² for all thicknesses for type GF-R2.

The bending strength shall be at least 10,0 N/mm² for all thicknesses for type GF-R1.

In addition, no individual result shall be more than 10 % below these values.
