English Version

Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products

Contribution des ouvrages de construction au développement durable - Déclarations environnementales sur les produits - Règles régissant les catégories de produits de construction

Nachhaltigkeit von Bauwerken - Umweltproduktdeklarationen - Grundregeln für die Produktkategorie Bauprodukte

This European Standard was approved by CEN on 13 November 2011.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (EN 15804:2012) has been prepared by Technical Committee CEN/TC 350 “Sustainability of construction works”, the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2012, and conflicting national standards shall be withdrawn at the latest by July 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

<https://standards.iteh.ai/catalog/standards/sist/f08af5a5-c28b-4fa5-bb00-ca1145b4f436/sist-en-15804-2012>

Introduction

This European standard provides core product category rules for all construction products and services. It provides a structure to ensure that all Environmental Product Declarations (EPD) of construction products, construction services and construction processes are derived, verified and presented in a harmonised way.

An EPD communicates verifiable, accurate, non-misleading environmental information for products and their applications, thereby supporting scientifically based, fair choices and stimulating the potential for market-driven continuous environmental improvement.

The standardisation process has taken place in accordance with EN ISO 14025. All common issues are covered horizontally for all product types in order to minimise vertical (branch specific) deviations.

EPD information is expressed in information modules, which allow easy organisation and expression of data packages throughout the life cycle of the product. The approach requires that the underlying data should be consistent, reproducible and comparable.

The EPD is expressed in a form that allows aggregation (addition) to provide complete information for buildings. This standard does not deal with aggregation at the building level nor does this standard describe the rules for applying EPD in a building assessment.

The standard deals with a limited number of quantifiable predetermined parameters. Future revisions may incorporate additional predetermined parameters.

This European Standard provides the means for developing a Type III environmental declaration of construction products and is part of a suite of standards that are intended to assess the sustainability of construction works.

This suite of standards includes:

- EN 15643-1, *Sustainability of construction works — Sustainability assessment of buildings — Part 1: General framework*;
- EN 15643-2, *Sustainability of construction works — Assessment of buildings — Part 2: Framework for the assessment of environmental performance*;
- EN 15978, *Sustainability of construction works — Assessment of environmental performance of buildings — Calculation method*;
- CEN/TR 15941, *Sustainability of construction works — Environmental product declarations — Methodology for selection and use of generic data*;
- EN 15942, *Sustainability of construction works — Environmental product declarations — Communication formats: business to business*.

EN 15804:2012 (E)**1 Scope**

This European standard provides core product category rules (PCR) for Type III environmental declarations for any construction product and construction service.

NOTE The assessment of social and economic performances at product level is not covered by this standard.

The core PCR:

- defines the parameters to be declared and the way in which they are collated and reported,
- describes which stages of a product's life cycle are considered in the EPD and which processes are to be included in the life cycle stages,
- defines rules for the development of scenarios,
- includes the rules for calculating the Life Cycle Inventory and the Life Cycle Impact Assessment underlying the EPD, including the specification of the data quality to be applied,
- includes the rules for reporting predetermined, environmental and health information, that is not covered by LCA for a product, construction process and construction service where necessary,
- defines the conditions under which construction products can be compared based on the information provided by EPD.

iTeh STANDARD PREVIEW

For the EPD of construction services the same rules and requirements apply as for the EPD of construction products.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

additional technical information

information that forms part of the EPD by providing a basis for the development of scenarios

3.2

ancillary material

input material or product that is used by the unit process producing the product, but which does not constitute part of the product

[EN ISO 14040:2006]

3.3

average data

data representative of a product, product group or construction service, provided by more than one supplier

NOTE The product group or construction service can contain similar products or construction services.

3.4

comparative assertion

environmental claim regarding the superiority or equivalence of one product versus a competing product that performs the same function

[EN ISO 14044:2006]

3.5

construction product

item manufactured or processed for incorporation in construction works

NOTE 1 Construction products are items supplied by a single responsible body.

NOTE 2 Adapted from the definition in ISO 6707-1:2004 according to the recommendation of ISO/TC 59/AHG Terminology.

[EN 15643-1:2010]

3.6

construction service

activity that supports the construction process or subsequent maintenance

3.7

co-product

any of two or more marketable materials, products or fuels from the same unit process, but which is not the object of the assessment

EN 15804:2012 (E)

NOTE Co-product, by-product and product have the same status and are used for identification of several distinguished flows of products from the same unit process. From co-product, by-product and product, waste is the only output to be distinguished as a non-product.

3.8 declared unit

quantity of a construction product for use as a reference unit in an EPD for an environmental declaration based on one or more information modules

EXAMPLE Mass (kg), volume (m³).

NOTE Adapted from the definition in ISO 21930-1:2007.

3.9 construction element

part of a construction containing a defined combination of products

3.10 environmental performance

performance related to environmental impacts and environmental aspects

[ISO 15392:2008]

[ISO 21931-1:2010]

3.11 functional equivalent

quantified functional requirements and/or technical requirements for a building or an assembled system (part of works) for use as a basis for comparison

iTeh STANDARD PREVIEW
(standards.iteh.ai)

NOTE Adapted from the definition in ISO 21931-1:2010 EN 15804:2012

<https://standards.iteh.ai/catalog/standards/sist/f08af5a5-c28b-4fa5-bb00-ca1145b4f436/sist-en-15804-2012>

3.12 functional unit

quantified performance of a product system for use as a reference unit

[EN ISO 14040:2006]

3.13 information module

compilation of data to be used as a basis for a Type III environmental declaration covering a unit process or a combination of unit processes that are part of the life cycle of a product

[EN ISO 14025:2010]

3.14 life cycle assessment LCA

compilation and evaluation of the inputs, outputs and the potential environmental impacts of a product system throughout its life cycle

[EN ISO 14044:2006]

3.15 life cycle inventory analysis LCI

phase of life cycle assessment involving the compilation and quantification of inputs and outputs for a product throughout its life cycle

[EN ISO 14040:2006]

3.16

non-renewable energy

energy from sources which are not defined as *renewable energy* sources

3.17

non-renewable resource

resource that exists in a finite amount that cannot be replenished on a human time scale

[ISO 21930:2007]

3.18

performance

expression relating to the magnitude of a particular aspect of the object of consideration relative to specified requirements, objectives or targets

NOTE Adapted from the definition in ISO 6707-1:2004 according to the draft recommendation of ISO/TC 59 Terminology.

3.19

product category

group of construction products that can fulfil equivalent functions

NOTE Adapted from EN ISO 14025:2010.

3.20

product category rules

PCR

set of specific rules, requirements and guidelines for developing Type III environmental declarations for one or more product categories

iTeh STANDARD PREVIEW
(standards.iteh.ai)
<https://standards.iteh.ai/catalog/standards/sist/f08af5a5-c28b-4fa5-bb00-ca1145b4f436/sist-en-15804-2012>

[EN ISO 14025:2010]

3.21

product system

collection of unit processes with elementary and product flows, performing one or more defined functions, and which models the life cycle of a product

[EN ISO 14040:2006]

3.22

programme operator

body or bodies that conduct a Type III environmental declaration programme

NOTE A program operator can be a company or a group of companies, industrial sector or trade association, public authorities or agencies, or an independent scientific body or other organization.

3.23

renewable energy

energy from renewable non-fossil sources

EXAMPLES Wind, solar, aerothermal, geothermal, hydrothermal and ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas and biogases.

NOTE Adapted from the definition in Directive 2009/28/EC.

EN 15804:2012 (E)**3.24****renewable resource**

resource that is grown, naturally replenished or naturally cleansed, on a human time scale

NOTE A renewable resource is capable of being exhausted, but may last indefinitely with proper stewardship. Examples include: trees in forests, grasses in grassland, fertile soil.

[ISO 21930:2007]

3.25**reference service life****RSL**

service life of a construction product which is known to be expected under a particular set, i.e., a reference set, of in-use conditions and which may form the basis of estimating the service life under other in-use conditions

[ISO 21930:2007]

3.26**reference service life data****RSL data**

information that includes the reference service life and any qualitative or quantitative data describing the validity of the reference service life

EXAMPLE Typical data describing the validity of the RSL include the description of the component (3.10) for which it applies, the reference in-use conditions under which it applies, and its quality

[ISO 15686-8:2008]

3.27**scenario**

collection of assumptions and information concerning an expected sequence of possible future events

3.28**secondary fuel**

fuel recovered from previous use or from waste which substitutes primary fuels

NOTE 1 Processes providing a secondary fuel are considered from the point where the secondary fuel enters the system from the previous system.

NOTE 2 Any combustible material recovered from previous use or from waste from the previous product system and used as a fuel in a following system is a secondary fuel.

NOTE 3 Examples for primary fuels are: coal, natural gas, biomass, etc.

NOTE 4 Examples for secondary fuels recovered from previous use or as waste are: solvents, wood, tyres, oil, animal fats.

3.29**secondary material**

material recovered from previous use or from waste which substitutes primary materials

NOTE 1 Secondary material is measured at the point where the secondary material enters the system from another system.

NOTE 2 Materials recovered from previous use or from waste from one product system and used as an input in another product system are secondary materials.

NOTE 3 Examples for secondary materials (to be measured at the system boundary) are recycled scrap metal, crushed concrete, glass cullet, recycled wood chips, recycled plastic.

3.30**specific data**

data representative of a product, product group or construction service, provided by one supplier

3.31**third party**

person or body that is recognized as being independent of the parties involved, as concerns the issues in question

NOTE "Parties involved" are usually supplier ("first party") and purchaser ("second party") interests.

[EN ISO 14024:2000]

3.32**type III environmental declaration**

environmental declaration providing quantified environmental data using predetermined parameters and, where relevant, additional environmental information

NOTE The calculation of predetermined parameters is based on the ISO 14040 series of standards, which is made up of ISO 14040, and ISO 14044. The selection of the predetermined parameters is based on ISO 21930 (adapted from ISO 14025).

3.33**upstream, downstream process**

process(s) that either precedes (upstream) or follows (downstream) a given life cycle stage

3.34**waste**

substance or object which the holder discards or intends or is required to discard

NOTE Adapted from the definition in the European Waste Directive 2008/98/EC.

<https://standards.iteh.ai/catalog/standards/sist/f08af5a5-c28b-4fa5-bb00-ca1145b4436/sist-en-15804-2012>

3.35**unit process**

the smallest element considered in the life cycle inventory analysis for which input and output data are quantified

[EN ISO 14040:2006]

4 Abbreviations

EPD	Environmental product declaration
PCR	Product category rules
LCA	Life cycle assessment
LCI	Life cycle inventory analysis
LCIA	Life cycle impact assessment
RSL	Reference service life
ESL	Estimated service life
EPBD	Energy performance of buildings directive

EN 15804:2012 (E)

5 General aspects

5.1 Objective of the Core PCR

An EPD according to this standard provides quantified environmental information for a construction product or service on a harmonized and scientific basis. It also provides information on health related emissions to indoor air, soil and water during the use stage of the building. The purpose of an EPD in the construction sector is to provide the basis for assessing buildings and other construction works, and identifying those, which cause less stress to the environment.

Thus, the objective of the core PCR is to ensure:

- the provision of verifiable and consistent data for an EPD, based on LCA;
- the provision of verifiable and consistent product related technical data or scenarios for the assessment of the environmental performance of buildings;
- the provision of verifiable and consistent product related technical data or scenarios potentially related to the health of users for the assessment of the performance of buildings;
- that comparisons between construction products are carried out in the context of their application in the building;
- the communication of the environmental information of construction products from business to business;
- the basis, subject to additional requirements, for the communication of the environmental information of construction products to consumers.

Declarations based on this standard are not comparative assertions.

NOTE See definition 3.4 and ISO14044:2006, clause 5.1 for more information concerning LCA used for comparative assertion.

5.2 Types of EPD with respect to life cycle stages covered

The LCA based information in an EPD may cover (see Figure 1):

- The product stage only. Such an EPD covers raw material supply, transport, manufacturing and associated processes; this EPD is said to be “cradle to gate” and becomes an EPD based on information modules A1 to A3;
- The product stage and selected further life cycle stages. Such an EPD is said to be “cradle to gate with options” and becomes an EPD based on information modules A1 to A3 plus other selected optional modules, e.g. end-of-life information modules C1 to C4. Information module D may be included in this EPD;
- The life cycle of a product according to the system boundary (see 6.3.4). In this case the EPD covers the product stage, installation into the building, use and maintenance, replacements, demolition, waste processing for re-use, recovery, recycling and disposal, and disposal and is said to be 'cradle to grave' and becomes an EPD of construction products based on a LCA, i.e. covering all information modules A1 to C4. In this EPD the information module D may be included.

NOTE 1 Information modules can supply information for processes for which there is no EPD available, e.g. a cleaning process.

NOTE 2 An information module may contain: the values of the pre-determined parameters and the technical information underlying their quantification, relevant technical information for further calculation of the environmental performance, scenarios for further calculation of the environmental performance.

NOTE 3 It is possible to have an EPD for a substance or preparation (e.g. cement), for a product (e.g. window), for a construction service (e.g. cleaning service as part of maintenance) and for an assemblage of products and/or a construction element (e.g. wall) for technical equipment (e.g. lift).
