This European Standard was approved by CEN on 15 May 2013.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (EN ISO 15197:2013) has been prepared by Technical Committee ISO/TC 212 "Clinical laboratory testing and in vitro diagnostic test systems" in collaboration with the Technical Committee CEN/TC 140 "In vitro diagnostic medical devices" the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2013, and conflicting national standards shall be withdrawn at the latest by November 2016.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN ISO 15197:2003.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive, see informative Annex ZA, which is an integral part of this document.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Endorsement notice

The text of ISO 15197:2013 has been approved by CEN as EN ISO 15197:2013 without any modification.

Annex ZA (informative)

Relationship between this European Standard and the Essential Requirements of EU Directive 98/79/EC *in vitro* diagnostic medical devices

This European Standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association to provide a means of conforming to Essential Requirements of the New Approach Directive 98/79/EC *in vitro* diagnostic medical devices.

Once this standard is cited in the Official Journal of the European Union under that Directive and has been implemented as a national standard in at least one Member State, compliance with the clauses of this standard given in table ZA.1 confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding Essential Requirements of that Directive and associated EFTA regulations.

Table ZA.1 — Correspondence between this European Standard and Directive 98/79/EC *in vitro* diagnostic medical devices

Clauses of this international Standard	Essential requirements (ERs) of Directive 98/79/EC	Qualifying Comments/Notes
4.2, 6	A.3	
4.3, 4.4	A.4	Aspects related to mechanical stress are not covered
4.3, 4.4, 6.5, 7	A.5	Packaging aspects are not covered.
4.3, 5.2, 5.3, 5.4, 5.5, 5.6, 5.8, 5.10, 5.11, 5.12	B.3.3	
5.7	B.3.4	
4.4	B.3.6	
6, 7	B.4.1	
6	B.6.1	
5.2	B.6.3	
5.3, 5.6	B.6.4.1	"Life time resistance to mechanical stress" is not covered.
5.2	B.6.4.4	Clause 5.2 only partially covers this ER, as it deals only with electrical terminals and connectors.
4.4, 7, 8	B.7.1	
7	B.8.1	The sixth paragraph of this ER (translation into other languages) is not covered.
7	B.8.2	Covered by reference to EN ISO 18113-1.

7	B.8.3	This aspect is covered by normative reference to EN ISO 18113-4 and EN ISO 18113-5. However, essential requirement B.8.3 of Directive 98/79/EC should be consulted for a comprehensive list of the information required
7	B.8.4	Not all the requirements of ER B.8.4 are covered, but only those required by EN ISO 18113-1, EN ISO 18113-4 and EN ISO 18113-5, related to IVD medical devices for self – testing
7	B.8.4(a)	If the manufacturer is not located in the EU, the manufacturer is required to designate an “EC Authorised Representative” established in the EU. In such cases and to comply with this ER, the name and address of the Authorised Representative are required
7	B.8.4(d)	Full compliance with this ER requires the use of the symbol [LOT] and the symbol [SN], as applicable.
7	B.8.6	Covered by normative reference to EN ISO 18113-4 and EN ISO 18113-5.
4.2, 7	B.8.7	Not all the requirements of this ER are covered, but only those required by the labelling standards EN ISO 18113-1, EN ISO 18113-4 and EN ISO 18113-5, related to IVD medical devices for self – testing

ISO 15197:2013(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 15197 was prepared by Technical Committee ISO/TC 212, *Clinical laboratory testing and in vitro diagnostic test systems*.

This second edition cancels and replaces the first edition (ISO 15197:2003), the clauses, subclauses and annexes of which have been technically revised.

ITeH STANDARD PREVIEW

<https://standards.iteh.ai/catalog/standards/sist/efc9101a-d6a8-415e-bcef-c80ebb27e2dd/sist-en-iso-15197-2013>

Introduction

Blood-glucose monitoring systems are *in vitro* diagnostic medical devices used predominantly by individuals affected by diabetes mellitus. Diabetes mellitus is caused by a deficiency in insulin secretion or by insulin resistance leading to abnormally high concentrations of glucose in the blood, which may result in acute and chronic health complications. When used properly, a glucose monitoring system allows the user to monitor and take action to control the concentration of glucose present in the blood.

This International Standard is intended for blood-glucose monitoring systems used by lay persons. The primary objectives are to establish requirements that result in acceptable performance and to specify procedures for demonstrating conformance to this International Standard.

Minimum performance criteria for blood-glucose monitoring systems were established from the analytical requirements (precision and trueness) for individual glucose measurement results. “System accuracy” is the term used in this International Standard to communicate the analytical capability of a blood-glucose monitoring system to the intended users (i.e. lay persons), who would not be familiar with metrological terms commonly used in laboratory medicine. System accuracy describes the ability of a glucose monitoring system to produce measurement results that agree with true glucose values when the system is used as intended. The concept of “system accuracy” includes measurement bias and measurement precision.

The requirements for system accuracy are based on three considerations:

- the effectiveness of current technology for monitoring patients with diabetes mellitus;
- recommendations of diabetes researchers as well as existing product standards and regulatory guidelines; and
- the state-of-the-art of blood-glucose monitoring technology.

In arriving at the performance requirements specified in the second edition of this International Standard, desirable goals had to be weighed against the capabilities of existing blood-glucose monitoring technology. The revised performance criteria in this edition are the result of improvements in technology since publication of the first edition. The considerations that formed the basis for the minimum acceptable analytical performance of a blood-glucose measuring device intended for self-monitoring are described in [Annex C](#).

Requirements that are unique to self-monitoring devices for blood-glucose are addressed in this International Standard. Requirements that apply in general to all *in vitro* diagnostic medical devices are incorporated by reference to other standards where appropriate.

Although this International Standard does not apply to glucose monitoring systems that provide measured values on an ordinal scale (e.g. visual, semiquantitative measurement procedures) or medical devices that measure blood-glucose continuously for self-monitoring, it may be useful as a guide for developing procedures to evaluate the performance of such systems.

[SIST EN ISO 15197:2013](#)

<https://standards.iteh.ai/catalog/standards/sist/efc9101a-d6a8-415e-bcef-c80ebb27e2dd/sist-en-iso-15197-2013>

In vitro diagnostic test systems — Requirements for blood-glucose monitoring systems for self-testing in managing diabetes mellitus

1 Scope

This International Standard specifies requirements for *in vitro* glucose monitoring systems that measure glucose concentrations in capillary blood samples, for specific design verification procedures and for the validation of performance by the intended users. These systems are intended for self-measurement by lay persons for management of diabetes mellitus.

This International Standard is applicable to manufacturers of such systems and those other organizations (e.g. regulatory authorities and conformity assessment bodies) having the responsibility for assessing the performance of these systems.

This International Standard does not:

- provide a comprehensive evaluation of all possible factors that could affect the performance of these systems,
- pertain to glucose concentration measurement for the purpose of diagnosing diabetes mellitus,
- address the medical aspects of diabetes mellitus management,
- apply to measurement procedures with measured values on an ordinal scale (e.g. visual, semiquantitative measurement procedures), or to continuous glucose monitoring systems,
- apply to glucose meters intended for use in medical applications other than self-testing for the management of diabetes mellitus
