

SLOVENSKI STANDARD

DSIST EN 300 761:2001 - -

01-gYdhYa VYf-2001 - -

Elektromagnetna združljivost (EMC) in zadeve v zvezi z radijskim spektrom (ERM) - Avtomatska identifikacija vozil za železnico (AVI)

ElectroMagnetic Compatibility and Radio Spectrum Matters (ERM); Automatic Vehicle
Identification (AVI) for railways

Ta slovenski standard je istoveten z: EN 300 761 V1.1.1.2001 - , 1\$2001

ICS:

33.060.99	Druga oprema za radijske komunikacije	Other equipment for radiocommunications
33.100.01	Elektromagnetna združljivost na splošno	Electromagnetic compatibility in general
45.020	Železniška tehnika na splošno	Railway engineering in general

DSIST EN 300 761:2001 - -

Foreword	7
Introduction	8
1 Scope.....	9
2 Normative references	9
3 Definitions, symbols and abbreviations	10
3.1 Definitions	10
3.2 Symbols	10
3.3 Abbreviations.....	10
4 General	11
4.1 Presentation of equipment for testing purposes	11
4.1.1 Choice of model for testing	11
4.1.2 Choice of operating frequencies.....	11
4.1.3 Testing of equipment without a permanent external RF port	12
4.1.4 Equipment with a permanent internal RF port.....	12
4.1.5 Equipment with a temporary RF port	12
4.2 Mechanical and electrical design	12
4.2.1 General.....	12
4.2.2 Controls.....	12
4.2.3 Test mode facility	12
4.3 Auxiliary test equipment.....	12
4.4 Interpretation of the measurement results	12
5 Test conditions, power sources and ambient temperatures.....	13
5.1 Normal and extreme test conditions.....	13
5.2 External test power source	13
5.3 Normal test conditions	13
5.3.1 Normal temperature and humidity.....	13
5.3.2 Normal test power source.....	13
5.3.2.1 Mains voltage	13
5.3.2.2 Regulated lead-acid battery power sources.....	14
5.3.2.3 Other power sources	14
5.4 Extreme test conditions.....	14
5.4.1 Extreme temperatures.....	14
5.4.1.1 Procedure for tests at extreme temperatures	14
5.4.1.1.1 Procedure for equipment designed for continuous transmit operation	14
5.4.1.1.2 Procedure for equipment designed for intermittent transmit operation	14
5.4.1.2 Extreme temperature ranges	15
5.4.2 Extreme test source voltages	15
5.4.2.1 Mains voltage	15
5.4.2.2 Lead-acid battery, regulated power sources.....	15
5.4.2.3 Power sources using other types of batteries	15
5.4.2.4 Other power sources	15
6 General conditions	16
6.1 Test signals and test modulation	16
6.1.1 Normal test signals (wanted and unwanted signals)	16
6.1.1.1 Signals for bit stream measurements.....	16
6.1.1.2 Signal for messages	16
6.2 Modes of operation of the transmitter.....	17
6.3 Encoder for receiver measurements	17
6.4 Facilities for access.....	17
6.4.1 Analogue access	17
6.4.2 Access points for data stream measurement	17

6.4.3	Coupling arrangements.....	18
6.4.3.1	Arrangements for measurements with continuous bit streams	18
6.4.3.2	Arrangement for measurements with messages	18
6.4.4	Message received indicator	18
6.5	Test sites and general arrangements for radiated measurements.....	18
6.6	Artificial antenna	19
6.7	Test fixture.....	19
6.7.1	Calibration.....	19
6.7.2	Mode of use.....	20
6.8	Testing of host equipment and plug-in radio devices.....	20
6.8.1	Method 1: combined equipment.....	20
6.8.2	Method 2: use of a test fixture and three hosts	20
7	Methods of measurement and limits for interrogator transmitter parameters.....	21
7.1	Equivalent isotropically radiated power (e.i.r.p).....	21
7.1.1	Definition	21
7.1.2	Method of measurement.....	21
7.1.3	Limit.....	21
7.2	Frequency error.....	22
7.2.1	Definition	22
7.2.2	Method of measurement.....	22
7.2.3	Limit.....	22
7.3	Transmitter spectrum mask	22
7.3.1	Definition	22
7.3.2	Method of measurement.....	22
7.3.3	Limit.....	23
7.4	Modulation index.....	23
7.4.1	Definition	23
7.4.2	Method of measurement.....	23
7.4.3	Limit.....	24
7.5	Eye pattern	24
7.5.1	Definition	24
7.5.2	Method of measurement.....	24
7.5.3	Limit.....	25
7.6	Radiated spurious emissions	25
7.6.1	Definition	25
7.6.2	Measuring receiver.....	25
7.6.3	Method of measurement conducted spurious emission	26
7.6.4	Method of measurement cabinet spurious radiation	26
7.6.5	Method of measurement radiated spurious emission.....	27
7.6.6	Limits	28
8	Methods of measurement and limits for interrogator receiver parameters	28
8.1	Maximum usable sensitivity.....	28
8.1.1	Definition	28
8.1.2	Method of measurements under normal and extreme test conditions	28
8.1.2.1	Test arrangement for equipment with integral antenna.....	29
8.1.2.2	Test arrangement for equipment with antenna connector	30
8.1.2.3	Test procedure for continuous bit streams	31
8.1.2.4	Test procedure for messages.....	31
8.1.3	Limits	31
8.2	Error behaviour at high wanted input signals.....	31
8.2.1	Definition	31
8.2.2	Method of measurement.....	31
8.2.3	Limit.....	32
8.3	Degradation measurements	32
8.3.1	Definition	32
8.3.2	General conditions	32
8.3.3	Co-channel rejection	33
8.3.3.1	Definition.....	33
8.3.3.2	Method of measurement	33

8.3.3.3	Limit	34
8.3.4	Adjacent channel selectivity	34
8.3.4.1	Definition	34
8.3.4.2	Method of measurement	34
8.3.4.3	Limit	34
8.3.5	Spurious response rejection and desensitization	35
8.3.5.1	Definition	35
8.3.5.2	Method of measurement	35
8.3.5.3	Limits	36
8.3.6	Intermodulation response rejection	36
8.3.6.1	Definition	36
8.3.6.2	Method of measurement	36
8.3.6.3	Limits	37
8.4	Spurious emissions	37
8.4.1	Definition	37
8.4.2	Method of measurement - conducted spurious emissions	37
8.4.3	Method of measurement - cabinet radiation	38
8.4.4	Method of measurement - radiated spurious components	39
8.4.5	Limit	39
9	Method of measurements and limits for transponders	39
9.1	Transponder sensitivity	39
9.1.1	Definition	39
9.1.2	Method of measurement	39
9.1.3	Limit	40
9.2	Transponder wake-up protection	40
9.2.1	Definition	40
9.2.2	Method of measurement	41
9.2.3	Limit	42
9.3	Transponder conversion gain	42
9.3.1	Definition	42
9.3.2	Method of measurement	42
9.3.3	Limits	43
9.4	Transponder spurious radiation	43
9.4.1	Definition	43
9.4.2	Method of measurement	43
9.4.3	Limits	43
10	Measurement uncertainty	44
Annex A (normative): Radiated measurements		45
A.1	Test sites and general arrangements for measurements involving the use of radiated fields	45
A.1.1	Outdoor test site	45
A.1.2	Standard position	45
A.1.3	Test antenna	46
A.1.4	Optional additional indoor site	46
A.2	Guidance on the use of radiation test sites	46
A.2.1	Measuring distance	46
A.2.2	Test antenna	47
A.2.3	Substitution antenna	47
A.2.4	Auxiliary cables	47
A.3	Further optional alternative indoor test site using a fully anechoic RF chamber	48
A.3.1	Example of the construction of a shielded anechoic chamber	48
A.3.2	Influence of parasitic reflections in anechoic chambers	48
A.3.3	Calibration of the shielded RF anechoic chamber	49

Annex B (normative):	General description of measurement methods	51
B.1	Conducted measurements.....	51
B.2	Radiated measurements.....	51
Annex C (normative):	Receiver methods of measurements using messages	53
C.1	General	53
C.2	Test signals.....	53
C.3	Method of measurement for receiver sensitivity.....	53
C.4	Method of measurements for receiver degradation.....	54
Annex D (normative):	Subclauses of the present document relevant for compliance with the essential requirements EC Council Directives.....	55
Annex E (informative):	Bibliography.....	56
History		57
