

Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings¹

This standard is issued under the fixed designation D 2665; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope

1.1 This specification covers requirements and test methods for materials, dimensions and tolerances, pipe stiffness, crush resistance, impact resistance, hydrostatic burst resistance, and solvent cement for poly(vinyl chloride) plastic drain, waste, and vent pipe and fittings. A form of marking is also included. Plastic which does not meet the material requirements specified in Section 5 is excluded. Installation procedures are given in the Appendix.

1.2 The values stated in inch-pound units are to be regarded as the standard. The metric equivalents of inch-pound units given in parentheses may be approximate.

1.3 The text of this specification references notes, footnotes, and appendixes which provide explanatory material. These notes and footnotes (excluding those in tables and figures) shall not be considered as requirements of the specification.

1.4 The following safety hazards caveat pertains only to the test methods portion, Section 7, of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *Definitions*—Definitions are in accordance with Terminology F 412, and abbreviations are in accordance with Terminology D 1600, unless otherwise specified.

4. Significance and Use

4.1 The requirements of this specification are intended to provide pipe and fittings suitable for the drainage and venting of sewage and certain other liquid wastes.

NOTE 1—Industrial waste disposal lines should be installed only with the specific approval of the cognizant building code authority since

¹ This specification is under the jurisdiction of ASTM Committee F17 on Plastic Piping Systems and is the direct responsibility of Subcommittee F17.63 on DWV. Current edition approved June 1, 2004. Published June 2004. Originally approved in 1968. Last previous edition approved in 2004 as D 2665 – 04.

chemicals not commonly found in drains and sewers and temperatures in excess of 180°F (82.2°C) may be encountered.

5. Materials

5.1 *Basic Materials*—The pipe shall be made of virgin PVC compounds meeting or exceeding the requirements of Class 12454 as defined in Specification **D 1784**. The fittings shall be made of virgin PVC compounds meeting or exceeding the requirements of Class 12454 as defined in Specification **D 1784** or Class 11432 as defined in Specification **D 4396**. These plastics contain stabilizers, lubricants, and pigments.

5.2 *Rework Material*—The manufacturer shall use only his own clean pipe or fitting rework material, and the pipe or fittings produced shall meet all the requirements of this specification.

5.3 *Solvent Cement*—The solvent cement used to join pipe and fittings made to this specification shall meet the requirements of Specification **D 2564**.

6. Requirements

6.1 *General*—The pipe and fittings shall be homogeneous throughout and free of visible cracks, holes, foreign inclusions, or other injurious defects. The pipe shall be as uniform as commercially practicable in color, opacity, density, and other physical properties.

6.1.1 The requirements in this section are intended only for use as quality control tests, not as simulated service tests.

6.2 Dimensions and Tolerances:

6.2.1 *Method*—All dimensions shall be determined in accordance with Test Method **D 2122**.

6.2.2 Dimensions:

6.2.2.1 The outside diameter and wall thicknesses of pipe shall meet the requirements of **Table 2**. The pipe shall be in either 10 or 20-ft (3.05 or 6.1-m) lengths, unless otherwise specified, with an allowable tolerance of $+1/2$, -0 in. ($+13$, -0 mm).

6.2.2.2 The patterns, dimensions, and laying lengths of fittings, including adaptors, shall meet the requirements of Specification **D 3311** and **Table 1**.

6.2.2.3 The patterns, dimensions, and laying lengths of Short-Pattern fittings shall meet the requirements of Specification **F 2135**.

6.2.2.4 The spigot dimensions of fittings shall meet the requirements of **Table 2**.

6.2.2.5 For all fittings having taper pipe threads, threads shall conform to Specification **F 1498** and be gaged in accordance with **7.5**. Fittings of nominal sizes not given in Specification **F 1498** shall not have threads.

6.2.2.6 Fabricated DWV fittings shall comply with **F 1866**.

6.3 Pipe Stiffness, Deflection Load and Flattening:

6.3.1 *Pipe*—The minimum pipe stiffness at 5 % deflection shall be in accordance with **Table 3**. The pipe shall deflect by 60 % of the nominal outside diameter (flattening) without

12	12.780 (324.6)	+0.030/-0.025 (+0.76/-0.64)	0.150 (3.81)	12.736 (323.5)	±0.015 (±0.38)	0.150 (3.81)	6.000 (152.4)	0.406 (10.3)	^C	^C

^A The wall thickness is a minimum value except that a $\pm 10\%$ variation resulting from core shift is allowable. In such case, the average of the two opposite wall thicknesses shall equal or exceed the value shown in the table.

^B The existing + tolerance for the 8-inch socket bottom dimension (+0.030) is scheduled to be lowered to +0.015 no later than Dec., 2006. This will allow manufacturers to modify existing tooling to be in compliance with the lower maximum at that time.

^C Not applicable for these nominal sizes.

TABLE 2 Dimensions and Tolerances for Outside Diameters and Thicknesses of PVC Plastic Drain, Waste, and Vent Pipe

Nominal Pipe Size	Outside Diameter			Wall Thickness	
	Average	Tolerance on Average	Out-of-Roundness (maximum minus minimum) in. (mm)	Minimum	Tolerance

18	60 (415)
20	51 (350)
24	45 (315)

^A Measured at 5 % deflection.

cracking, rupture, or other visible evidence of failure when tested in accordance with 7.4.

6.3.1.1 *Pipe Stiffness (PS)*—Three specimens shall be tested. If all three meet the PS requirement, the sample meets the PS requirement. If one or two fail, additional testing shall be conducted in accordance with 6.3.1.2. If all three fail, the sample does not meet the PS requirement.

6.3.1.2 *Pipe Stiffness and Lower Confidence Limit*—In the event that one or two of the specimens tested in 6.3.1 fail to meet the minimum PS requirement, the average pipe stiffness of eleven specimens shall meet or exceed the minimum requirement given in Table 3. The 99 % lower confidence limit (LCL) shall be within 15 % of the average value. The LCL

shall be calculated using the Student’s “*t*” distribution, with *N*-1 degrees of freedom, where *N* is the number of specimens. The critical *t* value shall be used to at least three significant digits. Alternatively, if the LCL exceeds the minimum PS requirement in Table 3, but is not within 15 % of the average, the sample meets the requirements of the pipe stiffness testing. The eleven specimens include the three tested under 6.3.1, and an additional eight with rotation by 35°, as specified in Test Method D 2412, continuing throughout the remaining specimens.

6.3.1.3 The LCL based on testing eleven specimens is calculated as follows:

$$LCL = (\text{avg PS}) - \{2.76(\text{std. dev.})/\sqrt{(N)}\} \quad (1)$$

where:

$$(\text{avg PS}) = [\sum(PS_i)]/N \quad (2)$$

$$(\text{std. dev.}) = \left[\frac{\sum PS^2 - (\sum PS)^2 / N}{N - 1} \right]^{1/2}$$

N = 11

6.3.1.4 The 15 % requirement is calculated as follows:

$$(\text{Avg} - LCL)/(\text{Avg}) \times 100 \leq 15 \% \quad (3)$$

NOTE 2—The 5 % deflection criterion, which was arbitrarily selected for testing convenience, should not be considered as a limitation with respect to in-use deflection. The engineer is responsible for establishing the acceptable deflection.
