This European Standard was approved by CEN on 21 November 2005 and includes Amendment 1 approved by CEN on 6 May 2010.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

This document (EN 13534:2006+A1:2010) has been prepared by Technical Committee CEN/TC 153 "Food processing machinery - Safety and hygiene specifications", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2010, and conflicting national standards shall be withdrawn at the latest by December 2010.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1, approved by CEN on 2010-05-06.

This document supersedes EN 13534:2006.

The start and finish of text introduced or altered by amendment is indicated in the text by tags A1 and A1.

This European Standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

A1 For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document. A1

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

## Introduction

This document is a type C standard as stated in EN ISO 12100-1.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this document.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 13534:2006+A1:2010](https://standards.iteh.ai/catalog/standards/sist/470d0f9c-8187-42d6-9eb7-c27ad0d2eace/sist-en-13534-2006a1-2010)

<https://standards.iteh.ai/catalog/standards/sist/470d0f9c-8187-42d6-9eb7-c27ad0d2eace/sist-en-13534-2006a1-2010>

## 1 Scope

1.1 This standard applies for

- curing injection machines with infeed and outfeed devices;
- curing injection machines with infeed and outfeed devices and loading devices.

This standard does not apply to portable/hand guided curing injection devices.

**A1** *deleted text* **A1**

This document deals with all significant hazards, hazardous situations and events relevant to curing injection machinery when they are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Clause 4).

This document is not applicable to curing injection machines which are manufactured before the date of publication of this document by CEN.

**1.2 This standard covers the following types of curing injection machines:**

Curing injection machines consist mainly of a single or multilane curing needle station, holding down clamp, infeed and outfeed devices, machine frame and related drive system, and electrical, electronic, or pneumatic components, depending on machine type.

Curing injection machines in the scope of this standard can be equipped with:

- infeed chute;
- splash guard flaps;
- single or multi-lane curing needle bars (needle station);
- holding down clamp;
- infeed and outfeed conveyor belt;
- infeed and outfeed rake;
- interlocked transport car at the outfeed side;
- loading device with delivery chute.

The product being processed (raw meat, game or raw fish) is fed by hand to the infeed device of the curing injection machine. The infeed device transports the product to the needle station; the product is then pressed against the infeed device by a holding down clamp. The needles of the needle station inject the curing liquid or other fluids into the product. The outfeed device then transports the product away from the needle station.

This standard also covers the loading devices, which can be necessary in the case of machines with high capacity and/or great height.

Curing injection machines in the scope of this standard can be stationary or mobile.

**1.2.1** Curing injection machines with single or multi-lane curing needle bars, infeed and outfeed device at the infeed and outfeed side (see Figure 1).

## EN 13534:2006+A1:2010 (E)

The distance A between the floor/ standing position and the infeed surface of the infeed and outfeed device is > 750 mm.

## KEY

A > 750 mm

1	On/Off switch, hood	8	Needle bar
2	Infeed side	9	Housing
3	Infeed device	10	Guard cover
4	Splash guard flaps	11	Outfeed side/ outfeed device
5	Safety switch	12	Delivery chute
6	Guard cover, movable, interlocked	13	Curing liquid overflow
7	Holding down clamp	14	Bottom reservoir

**Figure 1 — Construction of a curing injection machine with needle bar, holding down clamp, infeed and outfeed device**

**1.2.2** Curing injection machines with single or multi-lane curing needle bars, infeed and outfeed device at the infeed and outfeed side and an interlocked transport car at the outfeed side (see Figure 2).

The distance A between the floor/ standing position and the infeed surface of the infeed and outfeed device is > 750 mm.

**KEY**

$A > 750$  mm

1	On/Off switch, hood	8	Housing
2	Infeed side	9	Guard cover
3	Infeed and outfeed device	10	Outfeed side
4	Safety switch	11	Safety switch
5	Guard cover, moveable, interlocked	12	Transport car, interlocked
6	Holding down clamp	13	Curing liquid overflow
7	Needle bar	14	Bottom reservoir

SIST EN 13534:2006+A1:2010

**Figure 2 — Construction of a curing injection machine with needle bar, holding down clamp, infeed and outfeed device and transport car**

**1.2.3** Curing injection machines with single or multi-lane curing needle bars, infeed and outfeed device at infeed and outfeed side and with a loading device (see Figure 3).

The distance A between the floor/ standing position and the upper side of the infeed and outfeed device is  $> 750$  mm.

## EN 13534:2006+A1:2010 (E)

## KEY

A > 750 mm

1	Locking device	8	Holding down clamp
2	Transport car	9	Needle bars
3	Loading device	10	Housing
4	Delivery chute	11	Guard cover
5	Infeed and outfeed device	12	Outfeed side/deloading conveyor
6	Safety switch	13	Safety switch
7	Guard cover, moveable, interlocked	14	Transport car, interlocked
15	Curing liquid overflow	16	Bottom reservoir

**Figure 3 — Construction of a curing injection machine with needle bar, holding down clamp, infeed and outfeed device, transport car and loading device**

### 1.3 Intended use

During the production of this standard the following assumptions were made:

- Curing injection machines are installed at a sufficient lighted place.
- They are used only by designated and skilled operators.
- Although it should be advised against, this standard, taking into account practice, deals with the hazards due to cleaning with pressurised water.
