Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 3834-2 was prepared by Technical Committee ISO/TC 44, *Welding and allied processes*, Subcommittee SC 10, *Unification of requirements in the field of metal welding*.

This second edition cancels and replaces the first edition (ISO 3834-2:1994), which has been technically revised.

ISO 3834 consists of the following parts, under the general title *Quality requirements for fusion welding of metallic materials*:

- Part 1: *Criteria for the selection of the appropriate level of quality requirements*
- Part 2: *Comprehensive quality requirements*
- Part 3: *Standard quality requirements*
- Part 4: *Elementary quality requirements*
- Part 5: *Documents with which it is necessary to conform to claim conformity to the quality requirements of ISO 3834-2, ISO 3834-3 or ISO 3834-4*

NOTE A Technical Report ISO/TR 3834-6, *Quality requirements for fusion welding of metallic materials — Part 6: Guidance on implementing ISO 3834* is being prepared.

Requests for official interpretations of any aspect of this part of ISO 3834 should be directed to the Secretariat of ISO/TC 44/SC 10 via your national standards body, a complete listing which can be found at <http://www.iso.org>.

Quality requirements for fusion welding of metallic materials —

Part 2: Comprehensive quality requirements

1 Scope

This part of ISO 3834 defines comprehensive quality requirements for fusion welding of metallic materials both in workshops and at field installation sites.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 3834-1, *Quality requirements for fusion welding of metallic materials — Part 1: Criteria for the selection of the appropriate level of quality requirements*

ISO 3834-5:2005, *Quality requirements for fusion welding of metallic materials — Part 5: Documents with which it is necessary to conform to claim conformity to the quality requirements of ISO 3834-2, ISO 3834-3 or ISO 3834-4*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 3834-1 apply.

4 Use of this part of ISO 3834

For general information on the use of this part of ISO 3834, ISO 3834-1 shall be used.

In order to fulfil the quality requirements given in this part of ISO 3834, the conformity to relevant documents given in ISO 3834-5 shall be verified.

In certain situations, e.g. where manufacturing is more suited to ISO 3834-3 or ISO 3834-4, or where particular operations, such as heat treatment, are not undertaken, the requirements detailed in this part of ISO 3834 may be selectively amended or deleted.

Otherwise, the requirements contained within this part of ISO 3834 shall be adopted in full.

5 Review of requirements and technical review

5.1 General

The manufacturer shall review the contractual requirements and any other requirements, together with any technical data provided by the purchaser or in-house data when the construction is designed by the manufacturer. The manufacturer shall establish that all information necessary to carry out the manufacturing operations is complete and available prior to the commencement of the work. The manufacturer shall affirm its capability to meet all requirements and shall ensure adequate planning of all quality-related activities.

The review of requirements is carried out by the manufacturer to verify that the work content is within its capability to perform, that sufficient resources are available to achieve delivery schedules and that documentation is clear and unambiguous. The manufacturer shall ensure that any variations between the contract and any previous quotation are identified and the purchaser notified of any programme, cost or engineering changes that may result.

Items in 5.2 are typically considered at or before the time of the review of requirements review. Items in 5.3 usually form part of the technical review and are considered during the initial planning stage.

When a contract does not exist, e.g. items made for stock, the manufacturer is required to take into consideration the requirements of 5.2 while carrying out the technical review (see 5.3).

5.2 Review of requirements

Aspects to be considered shall include the following:

- a) the product standard to be used, together with any supplementary requirements;
- b) statutory and regulatory requirements;
- c) any additional requirement determined by the manufacturer;
- d) the capability of the manufacturer to meet the prescribed requirements.

5.3 Technical review

Technical requirements to be considered shall include the following:

- a) parent material(s) specification and welded joint properties;
- b) quality and acceptance requirements for welds;
- c) location, accessibility and sequence of welds, including accessibility for inspection and for non-destructive testing;
- d) the specification of welding procedures, non-destructive testing procedures and heat-treatment procedures;
- e) the approach to be used for the qualification of welding procedures ;
- f) the qualification of personnel;
- g) selection, identification and/or traceability (e.g. for materials, welds);
- h) quality-control arrangements, including any involvement of an independent inspection body;
- i) inspection and testing;

- j) sub-contracting;
- k) post-weld heat treatment;
- l) other welding requirements, e.g. batch testing of consumables, ferrite content of weld metal, ageing, hydrogen content, permanent backing, use of peening, surface finish, weld profile;
- m) use of special methods (e.g. to achieve full penetration without backing when welded from one side only);
- n) dimensions and details of joint preparation and completed weld;
- o) welds which are to be made in the workshop, or elsewhere;
- p) environmental conditions relevant to the application of the process (e.g. very low-temperature ambient conditions or any necessity to provide protection against adverse weather conditions);
- q) handling of non-conformances.

6 Sub-contracting

When a manufacturer intends to use sub-contracted services or activities (e.g. welding, inspection, non-destructive testing, heat treatment), information necessary to meet applicable requirements shall be supplied by the manufacturer to the sub-contractor. The sub-contractor shall provide such records and documentation of his work as may be specified by the manufacturer.

A sub-contractor shall work under the order and responsibility of the manufacturer and shall fully comply with the relevant requirements of this part of ISO 3834. The manufacturer shall ensure that the sub-contractor can comply with the quality requirements as specified.

The information to be provided by the manufacturer to the sub-contractor shall include all relevant data from the review of requirements (see 5.2) and the technical review (see 5.3). Additional requirements may be specified as necessary to assure sub-contractor compliance with technical requirements.

7 Welding personnel

7.1 General

The manufacturer shall have at his disposal sufficient and competent personnel for the planning, performing and supervising of the welding production according to specified requirements.

7.2 Welders and welding operators

Welders and welding operators shall be qualified by an appropriate test.

The ISO documents to which it is required to conform to fulfil the quality requirements are specified in ISO 3834-5:2005, Table 1, for arc welding, electron beam welding, laser beam welding and gas welding, and in ISO 3834-5:2005, Table 10, for other fusion welding processes.

7.3 Welding coordination personnel

The manufacturer shall have at his disposal appropriate welding coordination personnel. Such persons having responsibility for quality activities shall have sufficient authority to enable any necessary action to be taken. The tasks and responsibilities of such persons shall be clearly defined.

The ISO documents to which it is required to conform to fulfil the quality requirements are specified in ISO 3834-5:2005, Table 2, for arc welding, electron beam welding, laser beam welding and gas welding, and in ISO 3834-5:2005, Table 10, for other fusion welding processes.

8 Inspection and testing personnel

8.1 General

The manufacturer shall have at his disposal sufficient and competent personnel for planning, performing, and supervising the inspection and testing of the welding production according to specified requirements.

8.2 Non-destructive testing personnel

The non-destructive testing personnel shall be qualified. For visual testing, a qualification test may not be required. When a qualification test is not required, competence shall be verified by the manufacturer.

The ISO documents to which it is required to conform to fulfil the quality requirements are specified in ISO 3834-5:2005, Table 3, for arc welding, electron beam welding, laser beam welding and gas welding, and in ISO 3834-5:2005, Table 10, for other fusion welding processes.

9 Equipment

9.1 Production and testing equipment

The following equipment shall be available, when necessary:

- power sources and other machines; [ISO 3834-2:2005](https://standards.iteh.ai/catalog/standards/sist/c67aa246-e622-4f5e-9efc-1d71411f1b00/iso-3834-2-2005)
- equipment for joint and surface preparation and for cutting, including thermal cutting; <https://standards.iteh.ai/catalog/standards/sist/c67aa246-e622-4f5e-9efc-1d71411f1b00/iso-3834-2-2005>
- equipment for preheating and post-heat treatment including temperature indicator;
- jigs and fixtures;
- cranes and handling equipment used for the production;
- personal protective equipment and other safety equipment, directly associated with the applicable manufacturing process;
- ovens, quivers, etc. used for treatment of welding consumables;
- facilities for surface cleaning;
- destructive and non-destructive testing facilities.

9.2 Description of equipment

The manufacturer shall maintain a list of essential equipment, used for the production. This list shall identify items of major equipment, essential for an evaluation of workshop capacity and capability. This includes, for example:

- maximum capacity of crane(s);
- size of components that the workshop is able to handle;

- capability of mechanised or automatic welding equipment;
- dimensions and maximum temperature of furnaces for post-weld heat treatment;
- capacities of rolling, bending and cutting equipment.

Other equipment only needs to be specified by approximate total numbers which cover each general type (e.g. total number of power sources for the different processes).

9.3 Suitability of equipment

The equipment shall be adequate for the application concerned.

NOTE Qualification of the welding and heating equipment is not normally required unless otherwise specified.

9.4 New equipment

After installation of new (or refurbished) equipment, appropriate tests of the equipment shall be performed. The tests shall verify the correct function of the equipment. The tests shall be carried out and documented in accordance with appropriate standards, whenever relevant.

9.5 Equipment maintenance

The manufacturer shall have documented plans for the maintenance of equipment. The plan shall ensure maintenance checks of those items in the equipment which control variables listed in the relevant procedure specifications. The plans may be limited to those items which are essential for assuring the quality of the product.

Examples of these items are as follows: [ISO 3834-2:2005](https://standards.iteh.ai/catalog/standards/sist/c67aa246-e622-4f5e-9efc-0d71411500a0/iso-3834-2-2005)

- condition of guides in equipment for thermal cutting, mechanised fixtures etc.;
- condition of ammeters and voltmeters, flow meters etc. used for the operation of the welding equipment;
- condition of cables, hoses, connectors, etc.;
- condition of control system in mechanised and/or automatic welding unit;
- condition of temperature-measurement instruments;
- condition of wire feeders and conduits.

Defective equipment shall not be used.

10 Welding and related activities

10.1 Production planning

The manufacturer shall carry out adequate production planning.

Items to be considered shall include at least:

- specification of the sequence by which the construction shall be manufactured (e.g. as single parts or sub-assemblies, and the order of subsequent final assembly);
- identification of the individual processes required to manufacture the construction;
