Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2380-2 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 10, *Assembly tools for screws and nuts, pliers and nippers*.

This third edition cancels and replaces the second edition (ISO 2380-2:2000), which has been technically revised.

ISO 2380 consists of the following parts, under the general title *Assembly tools for screws and nuts — Screwdrivers for slotted-head screws*:

— *Part 1: Tips for hand- and machine-operated screwdrivers*

— *Part 2: General requirements, lengths of blades and marking of hand-operated screwdrivers*

Assembly tools for screws and nuts — Screwdrivers for slotted-head screws —

Part 2: General requirements, lengths of blades and marking of hand-operated screwdrivers

1 Scope

This part of ISO 2380 specifies the general requirements, lengths of blades and the marking of hand-operated screwdrivers for slotted-head screws as specified in ISO 4759-1.

The blade tips are specified in ISO 2380-1.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 272, *Fasteners — Hexagon products — Widths across flats*

ISO 2380-1, *Assembly tools for screws and nuts — Screwdrivers for slotted-head screws — Part 1: Tips for hand- and machine-operated screwdrivers*

ISO 4759-1, *Tolerances for fasteners — Part 1: Bolts, screws, studs and nuts — Product grades A, B and C*

3 General requirements

The material, shape and finish of the handle shall be suitable for the normal conditions of use.

The handle and the blade shall not be rough or have faults which could cause accidents during use of the screwdriver.

The torque requirements shall be in accordance with ISO 2380-1.

4 Blade lengths

The blade lengths, l_1 (see Figure 1), shall be in accordance with Table 1, in relation to the tip dimensions of the screwdrivers. Four series of lengths are provided.

For tips of nominal dimensions 1 mm × 5,5 mm and greater, the screwdriver may have a hexagonal drive near the handle, as shown in Figure 2, of which the width across the flats, s , and the respective tolerances shall be in accordance with ISO 272 and ISO 4759-1. The dimension h_{\min} is determined using the formula:

$$h_{\min} = 0,5 s$$

NOTE Figures 1 and 2 are given as examples and are not intended to influence the manufacturer's design.

^a l_2 is valid for form B only, and is the length of the tool shaft with diameter b according to ISO 2380-1.
 $l_2 = (3 \times b)$ min.
