Foreword	13
Introduction	13
1 Scope	15
2 Normative references	16
3 Definitions and abbreviations	17
4 Radio frequency interface	23
4.1 General	23
4.2 Channel frequencies	23
4.2.1 Channel centre frequencies	23
4.2.2 Channel frequency accuracy	23
4.2.3 Rate of change of transmit centre frequency	23
4.2.4 CTA access	23
4.3 Signalling strategy	23
4.3.1 CTA access	23
4.3.2 Signalling during communication	23
4.3.3 Signalling outside communication	23
4.4 Dynamic channel allocation strategy	24
4.4.1 Incoming calls	24
4.4.2 Outgoing calls	24
4.4.3 Channel selection strategies	24
4.4.4 Free channel	24
4.5 Radio transmitters	25
4.5.1 RF power	25
4.5.1.1 Maximum RF power	25
4.5.1.2 Minimum RF power	25
4.5.1.3 Output power at low power setting	25
4.5.2 Modulation	25
4.5.3 Adaptive transmitter power strategy	25
4.5.3.1 General	25
4.5.3.2 CPP only	25
4.5.3.3 CPP and CFP	25
4.5.3.4 Power level changes	26
4.5.4 Transmitter burst envelope	26
4.5.4.1 Amplitude	26
4.5.4.2 Dispersion effects	26
4.5.4.3 Guard time	26
4.5.5 Adjacent channel power (narrow band)	26
4.5.6 Out of band power arising from transmitter transients	26
4.5.7 Intermodulation attenuation	27
4.6 Radio receivers	27
4.6.1 General	27
4.6.1.1 CTA including three or more RFPs	27
4.6.1.2 Other CTAs	27
4.6.1.3 CTAs without integral or supplied antenna	27
4.6.2 Sensitivity	27
4.6.2.1 Receiver sensitivity for CFP or CPP using an integral or supplied antenna	27
4.6.2.2 Receiver sensitivity with a 50 ohm connector	27
4.6.3 Interference rejection	28
4.6.3.1 Unmodulated interfering carrier signal	28

4.6.3.2	Modulated asynchronous interfering signal	28
4.6.4	Blocking due to spurious responses	29
4.6.5	Intermodulation response rejection	29
4.7	Combined radio transmitter/receivers	29
4.7.1	Adverse power supply conditions	29
4.7.2	Spurious emissions of the combined transmitter/receiver	30
4.8	Termination of the communication state	30
4.8.1	Clear down signal sequence	30
4.8.2	Cessation of RF activity	30
4.8.3	Off-line timing	30
4.9	Channel scanning	30
4.9.1	Available channels	30
4.9.2	Response times	30
4.9.2.1	Outgoing	30
4.9.2.2	Incoming	31
4.10	In-communication channel switching	31
4.10.1	Capability	31
4.10.2	Channel change delay	31
4.11	Controls	31
4.12	Synthesisers and PLL systems	31
5	Signalling layer one	32
5.1	Data structure and timing	32
5.1.1	Data rate	32
5.1.2	Time-division duplexing	32
5.1.3	Master-slave relationship	33
5.2	Sub-channel multiplexes	33
5.2.1	Channel Markers (CHM) and synchronism markers (SYNC)	33
5.2.2	Multiplex one	34
5.2.3	Multiplex two	35
5.2.4	Multiplex three	36
5.3	Calling channel detection	37
5.3.1	Calling channel detection at the CPP	37
5.3.2	Calling channel detection at the CFP	38
5.4	Link set up and establishment	38
5.4.1	Link set up from CFP to CPP	38
5.4.2	Link set up from CPP to CFP	39
5.4.3	Set up collision resolution	40
5.4.4	Link re-establishment on the existing channel	40
5.4.5	Link re-establishment on a different channel	40
5.5	ID handshaking	40
5.5.1	General	40
5.5.1.1	Handshake code series	40
5.5.1.2	Code allocation	41
5.5.1.3	Code matching	41
5.5.1.4	Code recognition	41
5.5.1.5	Communication state	41
5.5.1.6	Lack of in-communication handshake: RF activity	41
5.5.1.7	Lack of in-communication handshake: off-line state	41
5.5.2	ID handshake operation	41
5.5.3	Handshake protocol	41
5.5.4	Reception of valid handshakes	42
5.5.5	ID handshake mechanism	43
6	Signalling layer two	44
6.1	Code word usage	44
6.2	General message format	44
6.3	General packet format	45
6.3.1	Order of transmission and field mapping convention	45

6.3.2	IDLE_D	45
6.3.3	Synchronisation word (SYNCD)	45
6.3.4	Code Words - (address and data code words)	46
6.3.5	Code word transmission sequence.	46
6.3.6	Check field encoding (octets 7 and 8)	46
6.4	Fixed length packet format (FT = 0)	47
6.4.1	SR (octet 1 (part))	47
6.4.2	LS (octet 1 (part))	47
6.4.3	HIC (octets 1 (part), 2, 3)	48
6.4.4	MIC (octet 4)	48
6.4.5	LID (octets 5 and 6)	48
6.5	Variable length packet format (FT = 1)	50
6.5.1	PI (octet 1)	50
6.5.2	L3_end (octet 1)	50
6.5.3	Endwrd and code word no/rem encoding (octet 1)	51
6.5.4	Control (octet 2)	51
6.5.5	Content	52
6.5.6	Link supervisory "messages"	52
6.5.7	Fill-in	54
6.6	Link establishment and re-establishment	54
6.6.1	Link set up from the CPP	54
6.6.2	Link re-establishment	55
6.6.3	Link set up from the CFP	55
6.6.4	CFP polling	56
6.6.5	CPP poll response	57
6.6.6	CPP link set up and re-establishment diagram	58
6.6.7	CFP link set up diagram	59
6.7	Layer two link protocol set up and control	60
6.7.1	Layer two link protocol timings	60
6.7.2	Layer two link operation	60
6.7.2.1	Link initialisation (see subclause 6.5.6 (iii))	61
6.7.2.2	Packet transmission	61
6.7.2.3	Packet reception	62
7	Signalling layer three	64
7.1	Single octet information elements	64
7.2	Variable length information elements	65
7.2.1	Keypad information element (KP)	67
7.2.2	Display information element (DISP)	68
7.2.3	Signal information element (SIG)	70
7.2.4	Feature activation information element (FA)	71
7.2.5	Feature indication information element (FI)	74
7.2.6	Channel control information element (CC)	77
7.2.7	Initialisation information element (INIT)	78
7.2.8	Authentication request information element (AUTH_REQ)	79
7.2.9	Authentication response information element (AUTH_RES)	80
7.2.10	Terminal capabilities information element (TERM_CAP)	81
7.2.11	Base capabilities information element (BAS_CAP)	82
7.2.12	Character information element (CHAR)	83
7.2.13	On-air (de-)registration acknowledge information element (OARAC)	84
7.2.14	Parameter set information element (PAR_SET)	84
7.2.15	Parameter request information element (PAR_REQ)	85
7.2.16	Parameter response information element (PAR_RES)	85
7.2.17	Alternative authentication request information element (AUTH2_REQ)	85
7.2.18	Alternative authentication response information element (AUTH2_RES)	86
7.2.19	Number of CPPs polled information element (NO_POLL)	86
7.3	Layer three mandatory syntax	86
7.3.1	Access to layer three	86
7.3.2	Exit from layer three	86

7.3.3 Emergency access	87
7.3.4 On-air registration	87
8 Speech coding and telephony	88
8.1 Definitions	88
8.1.1 Cordless Portable Part (CPP)	88
8.1.2 Fixed geometry CPP	88
8.1.3 Variable geometry CPP	88
8.1.4 CAI ADPCM voice codec (CIC = 0)	88
8.2 Speech transmission algorithm	88
8.2.1 Speech coding algorithm	88
8.2.2 Codec for telepoint CFP	89
8.3 Bit transmission sequence	89
8.4 Frequency responses	89
8.4.1 Sending frequency response	89
8.4.2 Receiving frequency response	90
8.5 Digital signal level	91
8.6 Sending and receiving loudness ratings	91
8.7 Sidetone loudness ratings	92
8.7.1 Sidetone for analogue telephony	92
8.7.2 Sidetone for digital telephony	92
8.7.2.1 Talker sidetone	92
8.7.2.2 Listener sidetone	92
8.8 Clipping	93
8.9 Distortion	93
8.9.1 Sending distortion	93
8.9.2 Receiving distortion	93
8.10 Noise	94
8.10.1 Sending	94
8.10.2 Sending (narrow-band noise) https://standards.ieee.org/analog-standards/sist/04547547-70fc-4c9b-810d-4fbe0e292454/sist-i-ets-300-131-e1-2003	94
8.10.3 Receiving	94
8.11 Delay	94
8.11.1 Handset delay	94
8.11.2 Base delay	94
8.11.3 Network echo from a CFP with a 2-wire analogue interface	94
8.12 Terminal coupling loss	95
8.12.1 Weighted terminal coupling loss (TCLw)	95
8.12.2 Stability loss (fixed geometry CPPs)	95
8.12.3 Stability loss (variable geometry CPPs)	95
8.12.4 CFP with a 4-wire interface	95
8.13 Out of band signals	96
8.13.1 Discrimination against out-of-band input signals (sending)	96
8.13.2 Spurious out-of-band signals (receiving)	96
8.14 Sampling frequency level (receiving)	96
8.15 Acoustic shock	96
8.15.1 Maximum intended sound pressure level	96
8.15.2 Maximum possible sound pressure level	96
8.16 Audible incoming call indication	97
8.16.1 Provided on CPP: sound pressure level	97
9 Radio frequency parametric and system tests	98
9.1 Test conditions, power sources and ambient temperatures	98
9.1.1 Normal and extreme test conditions	98
9.1.2 Test power source	98
9.1.3 Normal test conditions	98
9.1.3.1 Normal temperature and humidity	98
9.1.3.2 Normal test power source	98
9.1.3.2.1 Mains voltage	98
9.1.3.2.2 Regulated lead acid battery power sources	98

9.1.3.2.3	Nickel cadmium battery	99
9.1.3.2.4	Other power sources	99
9.1.4	Extreme test conditions	99
9.1.4.1	Extreme temperatures	99
9.1.4.2	Extreme test source voltages	99
9.1.4.2.1	Mains voltage	99
9.1.4.2.2	Regulated lead acid battery power sources	99
9.1.4.2.3	Nickel cadmium battery	99
9.1.4.2.4	Other power sources	99
9.1.5	Procedure for tests at extreme temperatures	99
9.2	Electrical test conditions	100
9.2.1	Arrangements for signals to be applied to the fixed and portable receivers	100
9.2.2	Artificial antenna	100
9.2.3	Test fixture for integral antenna	100
9.2.4	Test site and general arrangements for measurements involving the use of radiated fields	101
9.2.4.1	Test site	101
9.2.4.2	Test antenna	101
9.2.4.3	Substitution antenna	101
9.2.4.4	Optional additional indoor site	101
9.2.5	Transceiver test facility	102
9.3	Transmitter	103
9.3.1	Transmitter carrier power	103
9.3.1.1	Definition	103
9.3.1.2	Method of measurement for equipment with an antenna connection	103
9.3.1.3	Method of measurement for equipment with an integral antenna.	103
9.3.1.3.1	Method of measurement under normal test conditions	103
9.3.1.3.2	Method of measurement under extreme test conditions	104
9.3.1.4	Limits	104
9.3.2	Adjacent channel power (narrow-band measurement) https://standards.ieee.org/catalog/standards/sist_i-ets_300-131_e1-2003.html#fc-4c9b-810d	104
9.3.2.1	Definition	104
9.3.2.2	Method of measurement	104
9.3.2.3	Characteristics of the spectrum analyser	105
9.3.2.4	Integrating and power summing device	105
9.3.2.5	Limits	106
9.3.3	Out of band power arising from transmitter transients	106
9.3.3.1	Definition	106
9.3.3.2	Method of measurement	106
9.3.3.3	Characteristics of the spectrum analyser	106
9.3.3.4	Limits	106
9.3.4	Intermodulation attenuation	106
9.3.4.1	Definition	107
9.3.4.2	Method of measurement	107
9.3.4.3	Limits	107
9.3.5	Prevention of mis-operation due to adverse power supply conditions	107
9.3.5.1	Definition	107
9.3.5.2	Method of measurement	107
9.3.5.3	LimitsThe limits shall be those specified in subclause 4.7.1.	108
9.4	Spurious emissions	108
9.4.1	Spurious emissions of the combined transmitter/receiver	108
9.4.1.1	Definition	108
9.4.1.2	Method of measuring the power level (i)	108
9.4.1.3	Method of measuring the effective radiated power (ii)	108
9.4.1.4	Limits	109
9.5	Radio frequency system operation	109
9.5.1	Definitions	109
9.5.2	Channel frequencies	109
9.5.2.1	Ability to transmit on each of the 40 channels	109
9.5.2.2	Ability to receive on each of the 40 channels	109

iTet STANDARD REVIEW (Standards.itch.ai)

9.5.2.3	Ability to receive when the carrier frequency is up to ± 10 kHz from nominal	109
9.5.2.4	Ability to receive when carrier frequency is varying at a rate of up to 1 kHz/ms	109
9.5.3	Dynamic RF channel allocation strategy	109
9.5.3.1	No channel is occupied	109
9.5.3.2	One channel only below the threshold	110
9.5.3.3	All channels occupied	110
9.5.4	Adaptive CPP transmitter power control	110
9.5.5	RF modulation	110
9.5.5.1	Peak frequency deviation: transmission	110
9.5.5.2	Peak frequency deviation: reception	110
9.5.6	RF envelope	110
9.5.6.1	Transmitter output: ramp-down	110
9.5.6.2	Transmitter output: ramp-up	110
9.5.7	Radio receiver sensitivity	111
9.5.7.1	Raw bit error rate	111
9.5.8	Radio receiver blocking performance	111
9.5.8.1	Ability to receive in the presence of unmodulated interfering signals	111
9.5.8.2	Ability to receive in the presence of asynchronous modulated interfering signals	112
9.5.9	Blocking due to spurious responses	112
9.5.9.1	Blocking requirements	112
9.5.9.2	Intermodulation response rejection	112
9.6	Transmitter modulation	112
9.7	Power supply units	112
9.8	Declarations by the manufacturer	112
9.9	Labelling	113
SIST I-ETS 300 131 E1:2003

11.24.2	CTA tested as an entirety	131

11.24.3	Codec to be treated in isolation	132
11.24.4	CTA incorporating codec complying with 11.24.3	132
11.24.5	Standard of performance	133
Annex A (normative)		134
Layer three mandatory syntax diagrams		134
A.1	CPP mandatory layer three initialisation syntax	134
A.2	CFP mandatory layer three initialisation syntax	135
A.3	Telepoint CPP mandatory layer three syntax	136
A.4	Telepoint CFP mandatory layer three syntax	137
Annex B (normative):		138
Telepoint operation		138
B.1	Minimum telepoint handset configuration	138
B.2	Minimum telepoint base station configuration	139
B.3	Telepoint authentication	140
B.3.1	Introduction	140
B.3.2	Basis of operation	140
B.3.2.1	Identification information	140
B.3.2.2	KEY number	141
B.3.2.3	Function "F"	141
B.3.2.4	Assignment of KEY numbers	141
B.3.3	ZAP facility	142
B.3.4	Registration data fields	142
B.3.5	Entry of registration data	142
B.3.5.1	Basic data entry	142
B.3.5.2	Check digits	143
B.3.5.3	Termination of data entry	143
B.3.5.4	Example	144
B.3.6	Man-machine interface (MMI) for registration	144
B.3.7	Handset registration capacity	145
Annex C (normative):		146
Serial number format		146
Annex D (normative):		147
Accuracy of measurement		147
D.1	Radio frequency parametric and system tests	147
D.2	Signalling system tests	147
D.3	Speech and telephony tests	148
Annex E (informative)		149
Interim arrangements		149

E.1	Minimum RF power	149
E.2	Radio receiver sensitivity	149
E.3	Portable part ADPCM voice codec	149
E.4	Weighted terminal coupling loss	149
E.5	Alternative authentication algorithms	149
	Annex F (informative)	150
	Message sequence diagrams	150
F.1	Call set up to a telepoint CFP	151
F.2	Call set up to a private CFP	152
F.3	Private CFP incoming (group) call	153
F.4	Telepoint CFP incoming call	154
F.5	Call clear down	155
F.6	On air registration from CPP to private CFP	156
	Annex G (informative): (standards.iteh.ai)	157

	Annex H (informative):	158
	Intellectual property rights	158
	Annex J (normative):	160
	Subjective speech quality tests	160
J.1	Preparation of master recordings	161
J.1.1	Speech material	161
J.1.2	Apparatus and environment	161
J.1.3	Recording procedure	162
J.1.4	Calibration signals and speech levels	163
J.2	Processing of recordings	164
J.2.1	General	164
J.2.2	Processing through the apparatus under test	164
J.2.3	Processing through controlled distortion	165
J.3	Conduct of listening test	165
J.3.1	Apparatus, calibration and environment	165
J.3.2	Selection of subjects	166
J.3.3	Procedure	166
J.4	Treatment of results	168
J.5	Determination of laboratory-specific Q-rating boundaries for the purposes of subclause 11.24.5 ..	176
J.6	References	177

Annex K (informative):	178
Artificial echo loss for a CFP with a 4-wire interface	178
Annex L (informative):	179
Network echo from a CFP with a 2-wire analogue interface	179
History:	180

iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST I-ETS 300 131 E1:2003](#)
<https://standards.iteh.ai/catalog/standards/sist/04547547-70fe-4c9b-810d-4fbe0e292454/sist-i-ets-300-131-e1-2003>

Foreword

This Interim European Telecommunication Standard (I-ETS) has been prepared by the Radio Equipment and Systems (RES) Technical Committee of the European Telecommunications Standards Institute (ETSI) and has been adopted having undergone the ETSI standards approval procedure.

Parts of this I-ETS were prepared by the British Standards Institution (BSI), by the United Kingdom Department of Trade and Industry (DTI) and by those companies listed in Annex H. It contains information and copyright material, the property of these organisations. The connection of equipment specified here to the Public Switched Telephone Network (PSTN) is covered in prETS 300 001 [1].

Every I-ETS prepared by ETSI is a voluntary standard. This I-ETS contains text concerning the type approval of the equipment to which it relates. This text should be considered solely as guidance, and does not make the I-ETS mandatory.

The standard includes two types of requirement: those that are required in all units; and those that are optional in a unit, but shall be implemented in the specified manner if provided. The specifications of parts one and two are requirements unless otherwise stated. The specifications of part three are optional unless otherwise stated. The specifications of part four are requirements unless otherwise stated. The tests specified in part five shall be passed by all units where the tested feature is provided.

Annexes A to D and Annex J of this standard are normative. Annexes E to H and K to L are informative.

Introduction

iTeh STANDARD PREVIEW

This specification covers the minimum performance requirements for fixed and portable radio units used with the second generation cordless telephone (common air interface) CT2 (CAI) service operating in the band 864,100 MHz to 868,100 MHz.

[SIST I-ETS 300 131 E1:2003](#)

This specification is intended to allow a user to migrate from one cordless telephone environment (public or private; telepoint, domestic or PBX) to another without having to change; or having to purchase additional, radio equipment.

The specification is divided into five main parts:

Part 1: The radio interface (Clause 4): This part covers the minimum radio frequency performance requirements including channel frequencies, modulation and channel selection.

Part 2: Signalling layers one and two (Clauses 5 and 6): There are three layers of signalling requirements for the radio units. The first two layers are detailed in this part.

Signalling layer one covers aspects such as time-division duplexing, data multiplexing, link initiation and handshaking. This layer allows systems to obtain mutual synchronisation over a digital synchronisation channel and provides bi-directional data channels for digital signalling data and digital speech data.

Signalling layer two covers the signalling channel protocols, message formats, error detection, error correction and message acknowledgement. This layer allows systems to communicate over an established link using data and signalling channels which are established and maintained free from interference where possible.

Part 3: Signalling layer three (Clause 7): This part defines the structure of and attaches meanings to messages. Part of the message space is undefined in order to accommodate future expansion of services and facilities.

Part 4: Speech coding and transmission (Clause 8): This part specifies the requirements for the digital coding and transmission of analogue speech information.
