funktionale Sicherheit (ISO 13766-2:2018)

This European Standard was approved by CEN on 9 May 2018.

**The STANDARD PREVIEW  
(standardsituation)**

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

[SIST EN ISO 13766-2:2018](#)

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN ISO 13766-2:2018  
<https://standards.iteh.ai/catalog/standards/sist/4151b405-f6f6-4e42-bf81-0d583cd9ec4a/sist-en-iso-13766-2-2018>

## European foreword

This document (EN ISO 13766-2:2018) has been prepared by Technical Committee ISO/TC 127 "Earth-moving machinery" in collaboration with Technical Committee CEN/TC 151 "Construction equipment and building material machines - Safety" the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2018, and conflicting national standards shall be withdrawn at the latest by June 2021.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13309:2010.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

According to the CEN-CENELEC Internal Regulations the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Endorsement notice

The text of ISO 13766-2:2018 has been approved by CEN as EN ISO 13766-2:2018 without any modification.

**Annex ZA**  
 (informative)

**Relationship between this European Standard and the essential requirements of Directive 2006/42/EC machinery aimed to be covered**

This European Standard has been prepared under a Commission's standardization request M/396 to provide one voluntary means of conforming to essential requirements of Directive 2006/42/EC of the European Parliament and of the Council of 17 May 2006 on machinery, and amending Directive 95/16/EC (recast).

Once this standard is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of this standard given in Table ZA confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding essential requirements of that Directive, and associated EFTA regulations.

**Table ZA.1 — Correspondence between this European Standard and Annex I of Directive 2006/42/EC**

Essential Requirements of Directive 2006/42/EC	Clause(s) / subclause(s) of this EN	Remarks / Notes
1.2.1. Safety and reliability of control systems	1; 2; 3; 4; 5.1 (except recommendation last para); 5.1.1; 5.1.2; 5.2.1; 5.2.3; 5.2.4; 5.3.1; 5.3.3; 5.3.4; 6 <small>SIST EN ISO 13766-2:2018 <a href="https://standardsiticai.com/working-standards/sist/4151b405-f6f6-4e42-bf81-533e9c4a/sist-en-iso-13766-2-2018">https://standardsiticai.com/working-standards/sist/4151b405-f6f6-4e42-bf81-533e9c4a/sist-en-iso-13766-2-2018</a></small>	iTeh STANDARD PREVIEW (standardsiticai)

**WARNING 1** — Presumption of conformity stays valid only as long as a reference to this European Standard is maintained in the list published in the Official Journal of the European Union. Users of this standard should consult frequently the latest list published in the Official Journal of the European Union.

**WARNING 2** — Other Union legislation may be applicable to the product(s) falling within the scope of this standard.

iTEN STANDARD PREVIEW  
(standards.iteh.ai)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). **(standards.iteh.ai)**

The committee responsible for this document is ISO/TC 127, *Earth-moving machinery*, Subcommittee SC 2, *Safety, ergonomics and general requirements*.

SIST EN ISO 13766-2:2018  
<https://standards.iteh.ai/catalog/standards/sist/4151b405-f6f6-4e42-bf81-183404101101>

This first edition of ISO 13766-2:2018, together with ISO 13766-1:2018, cancels and replaces ISO 13766:2006, of which it constitutes a technical revision and contains the following changes:

- the scope has been extended to specify building construction machinery as well as earth-moving machinery;
- the provisions have been brought up to date with technological change;
- normative references have been updated to the latest editions.

A list of all parts in the ISO 13766 series can be found on the ISO website.

## Introduction

This document is a type-C standard as stated in ISO 12100:2010.

This document is of relevance, in particular, for the following stakeholder groups representing the market players with regard to machinery safety:

- machine manufacturers (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organisations, market surveillance etc.)

Others can be affected by the level of machinery safety achieved with the means of the document by the above-mentioned stakeholder groups:

- machine users/employers (small, medium and large enterprises);
- machine users/employees (e.g. trade unions, organizations for people with special needs);
- service providers, e.g. for maintenance (small, medium and large enterprises);
- consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate at the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When requirements of this type-C standard are different from those which are stated in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard. <https://standards.iteh.ai/catalog/standards/sist/4151b405-f6f6-4e42-bf81-0d583cd9ec4a/sist-en-iso-13766-2-2018>

With the increasing use of electronic devices in areas where earth-moving and construction machinery operates, there is a need to ensure that the machinery is provided with adequate immunity to electromagnetic disturbances. As more machinery is fitted with electrical and electronic devices, it is also necessary to ensure that the internal electromagnetic interference caused by emissions of subsystems of the machinery itself (machine disturbance) does not exceed the immunity of the respective subsystems.

The electrical and high-frequency disturbances covered by this document refer to electromagnetic effects caused due to technical appliances (man-made effects). These effects generally can be considered as singular ones and additionally are located and restricted to defined narrowly defined areas.

While these effects on machinery cannot be considered as being general, their consequences on machinery still need to be taken into account. They might be generated within a large frequency range with different electrical characteristics or by conduction or radiation, and then imparted to other electrical/electronic devices and systems by conduction or radiation. Narrowband, and sometimes broadband, signals generated by sources of interference inside or outside the machinery can also be coupled in electrical/electronic systems and influence the normal function of electrical/electronic devices.

Electrostatic discharges are relevant to the machinery because control elements can be positioned outside the operator station where potential differences could emerge at contact points. Conducted transients in power supply wiring must be considered because the machinery can contain open systems, in which several devices or components can be combined to complement machine functionality.

This document provides information on the kind and the level of effects as presently known. Indicative test methods and criteria can derive from these values, given that possible test levels acceptable for the machinery and, in the case of testing conducted on a voluntary basis, considering the unique characteristics and operating parameters of the machinery. However, the functions of the machinery
