Ref. No. ISO 92-1976 (E)

Descriptors : textile machinery, spinning, spinning frames, orientation, right side, left side.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO Council.

Prior to 1972, the results of the work of the Technical Committees were published as ISO Recommendations; these documents are now in the process of being transformed into International Standards. As part of this process, Technical Committee ISO/TC 72 has reviewed ISO Recommendation R 92 and found it technically suitable for transformation. International Standard ISO 92 therefore replaces ISO Recommendation R 92-1959 to which it is technically identical.

ISO Recommendation R 92 was approved by the Member Bodies of the following countries :

Austria	Hungary	Spain
Belgium	India	Sweden
Bulgaria	Ireland	Switzerland
Canada	Japan	Turkey
Denmark	Netherlands	United Kingdom
France	Pakistan	U.S.A.
Germany	Poland	U.S.S.R.
Greece	Romania	

No Member Body expressed disapproval of the Recommendation.

No Member Body disapproved the transformation of ISO/R 92 into an International Standard.

Textile machinery and accessories – Spinning machinery – Definition of side (left or right)

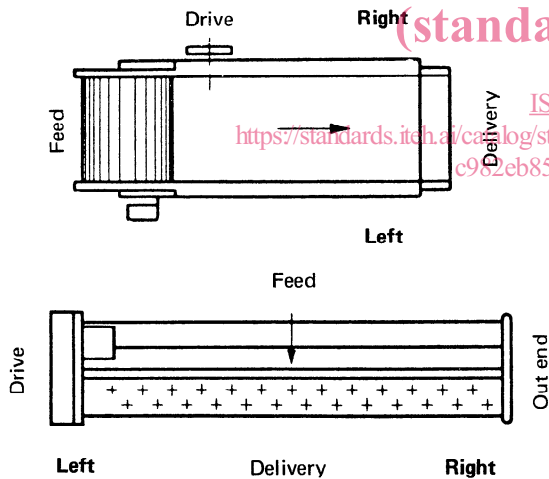

1 SCOPE AND FIELD OF APPLICATION

This International Standard gives a definition of side (left or right) of spinning machinery.

2 SPINNING MACHINE WITH FLOW OF THE MATERIAL IN ONE SINGLE DIRECTION

To determine the side of a spinning machine with flow of the material in one single direction, the observer looks against this flow.

Examples : Blowroom machines, cards, drawing frames and fly frames.

3 SPINNING MACHINE WITH FLOW OF THE MATERIAL IN VARIOUS DIRECTIONS

To determine the side of a spinning machine with flow of the material in various directions, the observer looks against this flow where the fibres are subject to the principal work.

Examples : Combing machines and ribbon lap-machines.

4 DOUBLE-SIDED SPINNING MACHINE

To determine the side of a double-sided spinning machine, the observer looks at the driving side of the delivery rollers. The same applies for machines driven in the centre where one right-hand and one left-hand machine are always built together.

Examples : Ring-spinning and ring-doubling frames, flyer-spinning and flyer-doubling frames.
