This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 151.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword

This document (prEN 1009-1:2017) has been prepared by Technical Committee CEN/TC 151 “Construction equipment and building material machines - Safety”, the secretariat of which is held by DIN.

This document is currently submitted to the CEN Enquiry.

This document has been prepared under a standardization request given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

prEN 1009 “Machines for mechanical processing of minerals and similar solid materials — Safety” comprises the following parts:

Part 1: Common requirements for partly completed machinery and processing plants

Part 2: Specific requirements for feeding machinery and continuous handling equipment

Part 3: Specific requirements for crushing and milling machinery

Part 4: Specific requirements for screening machinery

Part 5: Specific requirements for cleaning, recycling and mud treatment machinery

Part 6: Specific requirements for mobile and semi-mobile crushing and screening equipment

prEN 1009-1:2017 (E)**Introduction**

This document is a type-C standard as stated in EN ISO 12100.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this document.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards for machines that have been designed and built according to the provisions of this type C standard.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

SIST EN 1009-1:2020

<https://standards.iteh.ai/catalog/standards/sist/07054f51-4a8b-468e-a7e2-c043b5eedcbf/sist-en-1009-1-2020>

1 Scope

Processing mineral and by-products (cement, lime and gypsum, sand and gravel, industrial minerals, metalliferous ore, production and demolition waste, slag handling, hard and soft rock aggregates, coal) in construction and surface mining.

It deals with the following types of individual machines for the mechanical processing of minerals and similar solid materials:

- feeding machinery as per part 2;
- crushing machinery as per part 3;
- milling machinery as per part 3;
- screening machinery as per part 4;
- machinery for cleaning, water recycling, sorting (other than screens) and mud treatment as per part 5;
- mobile and semi-mobile machinery as per part 6.

This part gives the common safety requirements for mechanical processing machines used for quarrying, recycling and processing mineral and by-products (cement, lime and gypsum, sand and gravel, industrial minerals, metalliferous ore, production and demolition waste, slag handling, hard and soft rock aggregates, coal) in construction and surface mining and is intended to be used in conjunction with one of the prEN 1009-2 to -6. These machine specific parts (prEN 1009-2 to -6) do not repeat the requirements from prEN 1009-1:2017, but add or replace the requirements for the machine type in question.

NOTE The requirements specified in this part of the standard are common to two or more types of machines for the mechanical processing of minerals and similar solid materials.

Specific requirements in prEN 1009-2 to -6 take precedence over the respective requirements of prEN 1009-1:2017.

The standard also covers assemblies of two or more of the mentioned machines which function as an integrated whole. The machines included in the scope of this standard can be fixed, semi-mobile or mobile. The standard covers transportation, erection, commissioning, use and maintenance of single machines or combination of single machines.

This standard deals with significant hazards, common to the types of machines listed in this scope when they are used as intended and under conditions for misuse which are reasonably foreseeable by the manufacturer (see Clause 4) and to the hazards due to the combination of these machines and specifies the appropriate measures to eliminate or reduce the risks arising from the significant hazards.

1.1 Design relating to road traffic regulations is not covered by this standard.

1.2 This standard does not cover hazards arising from the use of the machines in potentially explosive atmospheres as well as from processing of explosive materials and risks related to electromagnetic compatibility.

1.3 This document is not applicable to machinery which are manufactured before the date of publication of this document by CEN.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100 and the following apply.

prEN 1009-1:2017 (E)**3.1****plant**

assembly of machines and/or partly completed machinery and/or components for the mechanical processing of minerals, arranged and controlled so that they function as an integral whole

Note 1 to entry: A plant may be an assembly of machines in the sense of the Machinery Directive 2006/42/EC, or not.

3.2**mobile machine**

crawler or wheel, self-propelled or trailed machine movable from a worksite to another or from a place to another on the same worksite

3.3**modular machinery**

module or combination of modules having no tracks, wheels or ground anchorage and designed to be partly dismantled to be transportable

EXAMPLE Skid chassis. See Annex A.

3.4**partly completed machinery**

single unit which is not intended to work alone but intended to be integrated in a modular machinery, a fixed plant or a mobile machine

3.5**passage opening**

opening which allows the movement or the entry of a person's entire body (e.g. door, manhole)

3.6**access opening**

opening through which a person can lean forward, reach forward, or extend the upper body, head, arm, hand, a finger or several fingers, leg or foot

3.7**visual inspection opening**

opening where, due to design or size, only visual inspections are possible

3.8**workspace**

volume allocated to one or more persons in the work system to complete the work task

3.9**operator's station**

area from which an operator controls the travel and/or work functions of the machine

4 List of significant hazards

This clause contains all the significant hazards, hazardous situations and events common to the different types of machines in the scope and also the hazards due to the assembly of different machines into a plant, identified by risk assessments significant for this type of machinery and which require action to eliminate or reduce the risk.

NOTE Risks which apply to specific types of machines are specified in Clause 4 of part 2 to 4 of this standard

Table 1 — List of significant hazards

No. a	Hazard, hazardous situation or hazardous event	Origin	Clause/subclause of this document
1	Mechanical hazards due to:		
1.1	Crushing hazard	Design of fixation for transportation	5.17.2
		Location of fixation for transportation	5.17.3
		Identification of fixation for transportation	5.17.4
		Handling with lifting point	5.17.5
		Finger jam	5.19
		Absence of guard – Unprotected moving parts (e.g. engine fan, belts).	5.10.2
		Fixation for transportation	5.17.1
		Guards around the machine	5.11
		Hydraulic unit	5.14
		Interlocking guard	5.10.4
		Lifting point for disassembly and maintenance	5.18.3
