

Designation: D1914 – 95 (Reapproved 2004) $^{\epsilon 1}$ 

# Standard Practice for Conversion Units and Factors Relating to Sampling and Analysis of Atmospheres<sup>1</sup>

This standard is issued under the fixed designation D1914; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon  $(\varepsilon)$  indicates an editorial change since the last revision or reapproval.

 $\varepsilon^1$  Note—Editorially corrected footnote in Table 1 in October 2004.

#### 1. Scope

1.1 This practice provides units and factors useful for members of the air pollution and meteorological communities.

1.2 This practice is used together with IEEE/ASTM SI-10IEEE/ASTM SI-10, which discusses SI units and contains selected conversion factors for inter-relation of SI units and some commonly used non-metric units.

#### 2. Referenced Documents

2.1 ASTM Standards:<sup>2</sup>

D1356 Terminology Relating to Sampling and Analysis of Atmospheres

E11 Specification for Woven Wire Test Sieve Cloth and Test Sieves

IEEE/ASTM SI-10 Standard for Use of the International

#### System of Units (SI): The Modern Metric System

### 3. Significance and Use

- 3.1 ASTM requires the use of SI units in all its publications and their use in reporting atmospheric measurement data. However, there are historic data and even data currently reported that are based on a variety of units of measurement. This practice tabulates factors that are necessary to convert such data to SI and other units of measurement.
- 3.2 IEEE/ASTM SI-10IEEE/ASTM SI-10 does not list all the conversion factors commonly used in air pollution and meteorological fields. This practice supplements IEEE/ASTM SI-10IEEE/ASTM SI-10.
- 3.3 The values reported here were obtained from a number of standard publications. They were adjusted to five figures and organized in a rational order. All values reflect the latest information from the 16th General Conference on Weights and Measurements held in 1979.
- 3.4 The factors in Table 1 are provided to change units of measurement from one system to related units in other systems, as well as to smaller or larger units in the same system.
- 3.5 Values of units in the left column may be converted to values of units in the right column merely by multiplying by the conversion factor provided in the center column.

<sup>&</sup>lt;sup>1</sup> This practice is under the jurisdiction of ASTM Committee D22 on Sampling and Analysis of Atmospheres and is the direct responsibility of Subcommittee D22.01 on Quality Control.

Current edition approved October 1, 2004. Published January 2005. Originally approved in 1961. Last previous edition approved in 1999 as D1914 - 95 (1999). DOI: 10.1520/D1914-95R04E01.
