This European Standard was approved by CEN on 24 November 2012.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## Foreword

This document (EN 9300-014:2013) has been prepared by the Aerospace and Defence Industries Association of Europe - Standardization (ASD-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of ASD, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2013, and conflicting national standards shall be withdrawn at the latest by July 2013.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

ITEH STANDARD PREVIEW

<https://standards.iteh.ai/catalog/standards/sist/04a96f89-2943-4598-8a16-6e26d65c2c57/sist-en-9300-014-2014>

## Introduction

This European Standard was prepared jointly by ASD-STAN and the PROSTEP iViP Association.

The PROSTEP iViP Association is an international non-profit association in Europe. For establishing leadership in IT-based engineering it offers a moderated platform to its nearly 200 members from leading industries, system vendors and research institutions. Its product and process data standardization activities at European and worldwide levels are well known and accepted. The PROSTEP iViP Association sees this standard and the related parts as a milestone of product data technology.

Users should note that all standards undergo revision from time to time and that any reference made herein to any other standard implies its latest edition, unless otherwise stated.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 9300-014:2014](https://standards.iteh.ai/catalog/standards/sist/04a96f89-2943-4598-8a16-6e26d65c2c57/sist-en-9300-014-2014)

## 1 Scope

This European Standard provides a detailed description for the recommended process of retrieval of 3D and PDM data. A main focus lies in the secure process, which implies the defined search for archived data elements and the dissemination of the data packages, which includes e.g. the check for digital signatures or the validation of archived data as overviewed in EN 9300-010.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 9300-003, *Aerospace series — LOTAR — LOng Term Archiving and Retrieval of digital technical product documentation such as 3D, CAD and PDM data — Part 003: Fundamentals and concepts*

EN 9300-007, *Aerospace series — LOTAR — LOng Term Archiving and Retrieval of digital technical product documentation such as 3D, CAD and PDM data — Part 007: Terms and References*<sup>1)</sup>

EN 9300-010, *Aerospace series — LOTAR — LOng Term Archiving and Retrieval of digital technical product documentation such as 3D, CAD and PDM data — Part 010: Overview Data Flow*<sup>1)</sup>

ISO 14721:2003, *Space data and information transfer systems — Open archival information system — Reference model [OAIS]*

## 3 Terms, definitions and abbreviations

For the purposes of this document, the terms, definitions and abbreviations given in EN 9300-007 shall apply.

## 4 Applicability

This EN 9300-014 is applicable to new 3-D product data records and may be applicable to existing 3D product data records, on current and earlier products, produced using previous regulations, standards and procedures. The current version is focused on product data as defined in the domain specific parts.

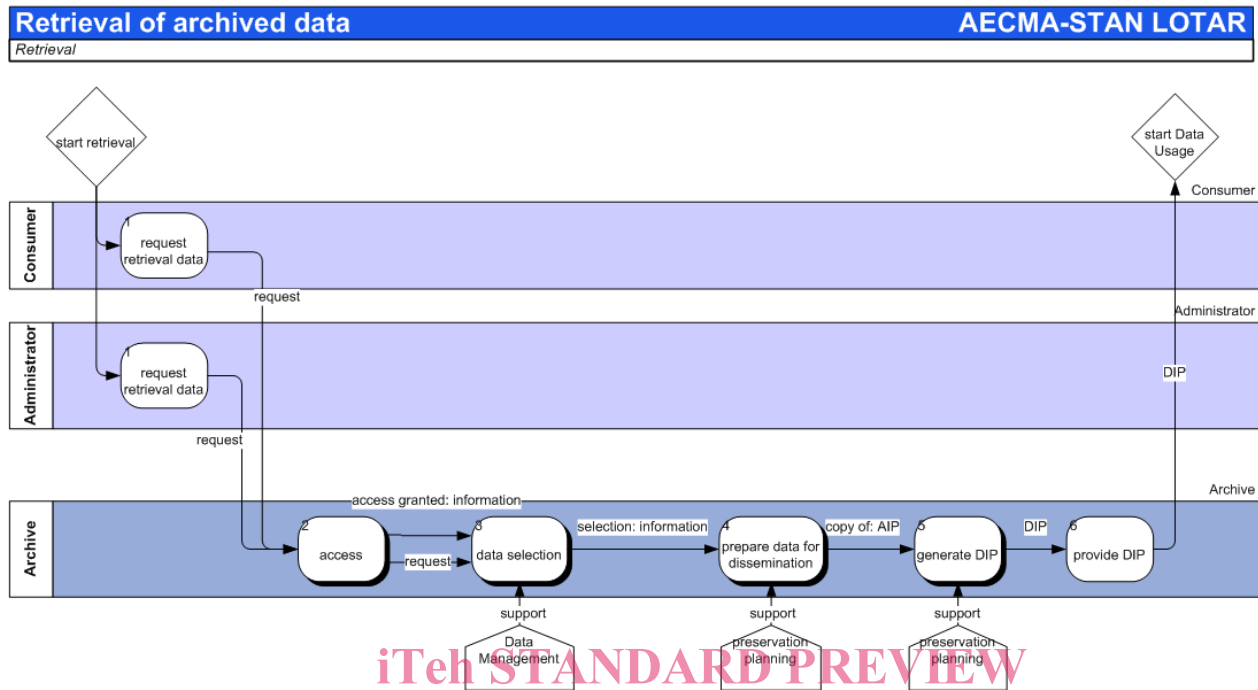

---

1) Published as ASD-STAN Prestandard at the date of publication of this standard ([www.asd-stan.org](http://www.asd-stan.org)).

## EN 9300-014:2013 (E)

## 5 Retrieval

See Figure 1.

The process includes a recommended access check, provides functionality for a data search to select the required data (provided the Consumer is allowed to see it), and the generation of a Dissemination Information Package (DIP). The generation of the DIP should meet the requirements of the Consumer. The sub process shall be certified.

Input data:

- Retrieval request

Output data:

- DIP

## 6 Detailed process steps description

## 6.1 General

Input and output data described in this standard represent the minimal requirements for the fulfilment of the process steps. Additional data may be added, but must match at a minimum the requirements for the information package. (See EN 9300-003, Section 5.3.2.1 "Definition of the core model").

## 6.2 Request retrieval data

The role Consumer/Administrator initiates a retrieval request for a data package. The request shall contain all information needed for the successful retrieval process i.e. selection of requested data, data format required for the DIP and any validation information required.

Output data:

- Request

## 6.3 Access

The Archive centrally supervises the access rights for each role. The supervisor check if the role has the access rights for triggered queries.

Input data:

- Request

Output data:

- Access granted information

## 6.4 Data selection

The Archive provides the functions to search for the requested data. This includes the verification of access rights and methods for filtering the selection, according to access rights, It may be implemented in batch or interactive mode. The filtering may result in successive and related requests from the consumer.

It may implemented in batch or interactive mode. The filtering may result in successive and related requests of the consumer.

Input data:

- Request
- Access granted information
- Support information

Output data:

- Selection information

## 6.5 Prepare data for dissemination

The archive checks the usability of data and the copies the AIP for dissemination.

Input data:

- Selection information
- Support information

Output data:

- Copy of AIP
