Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 6576 was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 7, *Spices and condiments*.

This second edition cancels and replaces the first edition (ISO 6576:1984), of which it constitutes a minor revision.

Laurel (*Laurus nobilis* L.) — Whole and ground leaves — Specification

1 Scope

This International Standard specifies requirements for whole and ground leaves of laurel (*Laurus nobilis* L.)¹ for wholesale purposes.

Recommendations relating to storage and transport conditions are given in Annex A for information only.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 927, *Spices and condiments — Determination of extraneous matter content*

ISO 928, *Spices and condiments — Determination of total ash*

ISO 930, *Spices and condiments — Determination of acid-insoluble ash*

ISO 939, *Spices and condiments — Determination of moisture content — Entrainment method*

ISO 948, *Spices and condiments — Sampling*

ISO 2825, *Spices and condiments — Preparation of a ground sample for analysis*

ISO 5498, *Agricultural food products — Determination of crude fibre content — General method*

ISO 6571, *Spices, condiments and herbs — Determination of volatile oil content*

3 Requirements

3.1 Description

Laurel is the dried leaf of the deciduous (evergreen) tree *Laurus nobilis* L.

The laurel leaf is oblong, tough, lanceolate, more or less undulated at the edges, pointed or obtuse at the tip (depending on the origin) with a short petiole. It is green on the surface, the underneath being lighter in colour, sometimes approaching yellow. Its length varies from 25 mm to 100 mm and its width from 20 mm to 45 mm at the widest point of the leaf (depending on the origin).

When it is dry, the leaf is soft, shiny on the surface and dull underneath. It has veins which are visible on the surface and prominent on the underneath. A filament of small veins is clearly visible. (See Figure 1.)

1) Commonly known as “bay laurel” or “bay-leaves” and should not be confused with *Pimenta racemosa* (Miller) J.W. Moore.

In trade, laurel occurs

- as whole dried leaves, and
- as ground dried leaves.

3.2 Odour and flavour

The odour of laurel is quite pleasant, strong and delicate at the same time, but it only emanates strongly when the leaf is crushed. The flavour is aromatic, mixed with bitterness and pungency.

The laurel shall be free from any extraneous odour, in particular mustiness.

3.3 Absence of insects, moulds, etc.

Laurel shall be free from living insects and moulds, and shall be practically free from dead insects, insect fragments and rodent contamination visible to the naked eye (corrected, if necessary, for abnormal vision), or with such magnification as may be necessary in any particular case. If the magnification exceeds 10 \times , this fact shall be stated in the test report.

3.4 Extraneous matter

For the purposes of this International Standard, extraneous matter is considered to be

- a) all matter which does not constitute the laurel leaf, in particular stems, and
- b) all other extraneous animal, vegetal and mineral matter.

The total extraneous matter content, when determined by the method specified in ISO 927, shall not exceed 2 % (by mass).

3.5 Classification

Laurel may be classified according to its country of production and the dimensions of its leaves.

The main producing countries are listed in Annex B.

3.6 Chemical requirements

Laurel shall comply with the requirements given in Table 1.

Table 1 — Chemical requirements

Characteristic	Requirement	Test method
Moisture content, % (mass fraction) max.	8	ISO 939
Total ash, % (mass fraction) (dry basis), max.	7	ISO 928
Acid-insoluble ash, % (mass fraction) (dry basis), max.	2	ISO 930
Volatile oil content, ml/100 g, min.	1	ISO 6571
Crude fibre content, % (mass fraction) (dry basis), max.	30	ISO 5498

4 Sampling

Sample consignments of laurel in accordance with ISO 948.

Prepare a ground sample for analysis in accordance with ISO 2825, such that the whole of the product passes through a sieve of aperture size 500 μm .
