

Designation: C 1334 – 05

Standard Specification for Uranium Oxides with a ^{235}U Content of Less Than 5 % for Dissolution Prior to Conversion to Nuclear-Grade Uranium Dioxide¹

This standard is issued under the fixed designation C 1334; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers uranium oxides, including processed byproducts or scrap material (powder, pellets, or pieces), that are intended for dissolution into uranyl nitrate solution meeting the requirements of Specification C 788 prior to conversion into nuclear grade UO_2 powder with a ^{235}U content of less than 5 %. This specification defines the impurity and uranium isotope limits for such uranium powders that are to be dissolved prior to processing to nuclear grade UO_2 as defined in Specification C 753.

1.2 This specification provides the nuclear industry with a general standard for such uranium oxide powders. It recognizes the diversity of conversion processes and the processes to which such powders are subsequently to be subjected (for instance, by solvent extraction). It is therefore anticipated that it may be necessary to include supplementary specification limits by agreement between the buyer and seller.

1.3 The scope of this specification does not comprehensively cover all provisions for preventing criticality accidents, for health and safety, or for shipping. Observance of this specification does not relieve the user of the obligation to conform to all international, national, state and local regulations for processing, shipping, or any other way of using uranium powders (see 2.2 and 2.3).

3. Terminology

3.1 *Definition of Term Specific to This Standard:*

3.1.1 Terms shall be defined in accordance with Terminology C 859, except for the following:

3.1.2 *Commercial Grade Uranium Oxide, n*—any oxide of uranium made from unirradiated uranium. It is recognized some contamination with reprocessed uranium may occur during routine processing; this is acceptable provided that the specification for Commercial Grade Uranium Oxide as set forth in 4.1 is met.

3.1.3 *scrap, n*—in the nuclear industry, residues that contain sufficient quantities of source or special nuclear material to be worthy of recovery.

4. Isotopic Content

4.1 For Commercial Grade Uranium Oxide with an isotopic content of ^{235}U between that of natural uranium and 5 %, the isotopic and radionuclide limits of Specification C 996 shall

¹ This specification is under the jurisdiction of ASTM Committee C26 on Nuclear Fuel Cycle and is the direct responsibility of Subcommittee C26.02 on Fuel and Fertile Material Specifications.

Current edition approved Jan. 1, 2005. Published February 2005. Originally approved in 1996. Last previous edition approved in 2000 as C 1334 – 96 (2000).
