This European Standard was approved by CEN on 19 January 2013.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

SIST EN 4632-006:2014

<https://standards.iteh.ai/catalog/standards/sist/30e5e894-5c9a-4d65-b79e-dfaddb83bd59/sist-en-4632-006-2014>

Foreword

This document (EN 4632-006:2013) has been prepared by the Aerospace and Defence Industries Association of Europe - Standardization (ASD-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of ASD, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2013, and conflicting national standards shall be withdrawn at the latest by September 2013.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

The STANDARD PREVIEW

This standard is part 6 of a series of 8 standards with:

(standards.iteh.ai)

- EN 4632-002, Aerospace series — *Welded and brazed assemblies for aerospace constructions — Weldability and brazeability of materials — Part 002: Homogeneous assemblies aluminium and aluminium alloys*
- EN 4632-003, Aerospace series — *Weldability and brazeability of materials in aerospace constructions — Part 003: Welding and brazing of homogeneous assemblies of unalloyed and low alloy steels*
- EN 4632-004, Aerospace series — *Welded and brazed assemblies for aerospace constructions — Weldability and brazeability of materials — Part 004: Homogeneous assemblies highly alloyed steels*
- EN 4632-005, Aerospace series — *Weldability and brazeability of materials in aerospace constructions — Part 005: Homogeneous assemblies of heat resisting Ni or Co base alloys*
- EN 4632-007, Aerospace series — *Weldability and brazeability of materials in aerospace constructions — Part 007: Homogeneous assemblies of miscellaneous alloys*

1 Scope

This European Standard defines degrees of weldability and brazeability for materials or families of materials used in the aerospace applications.

It comprises a series of sheets, by materials or by material family, which:

- indicate the main titles, the typical chemical composition and the main characteristics,
- contain recommendations for welding and brazing,
- indicate a degree of weldability or brazeability for a given process under defined conditions.

It is applicable without restriction for the manufacturing of new parts or for repair.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 3120, Aerospace series — Titanium alloy Ti-P64003 — Cold worked and stress relieved — Seamless tube for pressure systems — $4 \text{ mm} \leq D \leq 51 \text{ mm}$ — $690 \text{ MPa} \leq R_m \leq 1\ 030 \text{ MPa}$

4 Use of this standard

The index of material sheets contained in this standard, classified by family based on the main element used in the chemical composition and on the alloy structure, is given in Clause 6 of this standard.

The degree of weldability or brazeability to be used is the value indicated by the material sheet considered for the process chosen. In the operating cycle, preferably select thermal states that give the lowest degree.

If two degrees are indicated, the responsible person must select the degree that is most appropriate for the definition of the assembly.

5 Updating of this standard

See EN 4632-001.

6 List of titanium alloys sheets

7.1.3 Structure

α structure

7.1.4 Particular characteristics

Chemical pickling recommended: welding within 12 hours, otherwise storage under gaseous protection with a neutral gas in a confined environment after chemical pickling.

Chemical pickling may be omitted on mechanical preparations with very good R_a and thorough cleaning.

Improvement of gaseous protection for 141, 15, 52 processes.

For single-run welding without re-start of weld (141, 15, 52) a straw-colouring of the melted zone or/and heat affected zone may be acceptable. For multi-runs welding, this straw-colouring is not permitted between runs.

7.1.5 Forms

Ti-P99002: Hot rolled sheet (EN 3442) – Cold rolled sheet (EN 3498) – Forging stock (EN 3451) – Bars (EN 3460).

Ti-P99003: Hot rolled sheet (EN 3443) – Cold rolled sheet (EN 3499) – Forging stock (EN 3453) – Bar (EN 3461) – Forgings (EN 3496).
