Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (EN) has been produced by ETSI Technical Committee Electronic Signatures and Infrastructures (ESI).

The present document is part 2 of a multi-part deliverable covering the PDF digital signatures (PAdES). Full details of the entire series can be found in part 1 [4].

National transposition dates	
Date of adoption of this EN:	1 April 2016
Date of latest announcement of this EN (doa):	31 July 2016
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 January 2017
Date of withdrawal of any conflicting National Standard (dow):	31 January 2017
https://standards.iteh.ai/catalog/standards/sist/8e8e6558-cc00-4bd1-80f0-2c52fa05867c/sist-en-319-142-2-v1-1-2016	

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Introduction

Electronic commerce has emerged as a frequent way of doing business between companies across local, wide area and global networks. Trust in this way of doing business is essential for the success and continued development of electronic commerce. It is therefore important that companies using this electronic means of doing business have suitable security controls and mechanisms in place to protect their transactions and to ensure trust and confidence with their business partners. In this respect digital signatures are an important security component that can be used to protect information and provide trust in electronic business.

The present document is intended to cover digital signatures supported by PKI and public key certificates. This includes evidence as to its validity even if the signer or verifying party later attempts to deny (i.e. repudiates; see ISO/IEC 10181-4 [i.1]) the validity of the signature.

Thus, the present document can be used for any document encoded in a portable document format (PDF) produced by an individual and a company, and exchanged between companies, between an individual and a governmental body, etc. The present document is independent of any environment; it can be applied to any environment, e.g. smart cards, SIM cards, special programs for digital signatures, etc.

The present document is part of a rationalized framework of standards (see ETSI TR 119 000 [i.8]). See ETSI TR 119 100 [i.9] for getting guidance on how to use the present document within the aforementioned framework.

iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 319 142-2 V1.1.1:2016

<https://standards.iteh.ai/catalog/standards/sist/8e8e6558-cc00-4bd1-80f0-2c52fa05867c/sist-en-319-142-2-v1-1-1-2016>

1 Scope

The present document defines multiple profiles for PAdES digital signatures which are digital signatures embedded within a PDF file.

The present document contains a profile for the use of PDF signatures, as described in ISO 32000-1 [1] and based on CMS digital signatures [i.6], that enables greater interoperability for PDF signatures by providing additional restrictions beyond those of ISO 32000-1 [1]. This first profile is not related to ETSI EN 319 142-1 [4].

The present document also contains a second set of profiles that extend the scope of the profile in PAdES part 1 [5], while keeping some features that enhance interoperability of PAdES signatures. These profiles define three levels of PAdES extended signatures addressing incremental requirements to maintain the validity of the signatures over the long term, in a way that a certain level always addresses all the requirements addressed at levels that are below it. These PAdES extended signatures offer a higher degree of optionality than the PAdES baseline signatures specified in ETSI EN 319 142-1 [4].

The present document also defines a third profile for usage of an arbitrary XML document signed with XAdES signatures that is embedded within a PDF file.

The profiles defined in the present document provide equivalent requirements to profiles found in ETSI TS 102 778 [i.10].

Procedures for creation, augmentation, and validation of PAdES digital signatures are out of scope and specified in ETSI EN 319 102-1 [i.11]. Guidance on creation, augmentation and validation of PAdES digital signatures including the usage of the different attributes is provided in ETSI TR 119 100 [i.9].

The present document does not repeat the base requirements of the referenced standards, but instead aims to maximize interoperability of digital signatures in various business areas.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in ISO 32000-1 [1], ETSI TR 119 001 [i.12] and ETSI EN 319 142-1 [4] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI TR 119 001 [i.12] and the following apply:

CA	Certification Authority
CMS	Cryptographic Message Syntax

NOTE: As specified in IETF RFC 5652 [i.6].

CRL	Certificate Revocation List
DER	Distinguished Encoding Rules
ESS	Enhanced Security Services
MDP	Modification Detection and Prevention
OCSP	Online Certificate Status Protocol
PDF	Portable Document Format
SIM	Subscriber Identity Module
TSA	Time-Stamping Authority
UBL	Universal Business Language
UTC	Coordinated Universal Time
XML	XML Forms Architecture
XMP	Extensible Metadata Platform

ITEH STANDARD PREVIEW
(standards.iteh.ai)

4 Profile for CMS digital signatures in PDF

<https://standards.iteh.ai/catalog/standards/sist/8e8e6558-cc00-4bd1-80f0-2c52fa05867c/sist-en-319-142-2-v1-1-2016>

4.1 Features

The present profile specifies digital signatures that:

- Are encoded in CMS as defined by PKCS #7 1.5 (see IETF RFC 2315 [2]).
- Support serial signatures.
- Optionally include signature time-stamps.
- Optionally include revocation information.
- Protect integrity of the document and authenticates the signer identity information included in the signing certificate.
- Can optionally include the "reasons" for the signature.
- Can optionally include a description of the location of signing.
- Can optionally include contact info of the signer.

A "legal content attestation" can be used to indicate to the relying party the PDF capabilities which may affect the signed document (e.g. JavaScript).

4.2 Requirements of Profile for CMS Signatures in PDF

4.2.1 Requirements on PDF signatures

While ISO 32000-1 [1], clause 12.8 clearly states the majority of the requirements necessary for conformance with this profile, this clause specifies additional requirements for conformance.

- a) PDF Signatures shall be as specified in ISO 32000-1 [1], clause 12.8.
- b) The signature information shall be embedded into the document itself and the ByteRange shall be the entire file, including the signature dictionary but excluding the PDF Signature itself.
- c) The PDF Signature (a DER-encoded PKCS#7 binary data object) shall be placed into the **Contents** entry of the signature dictionary.
- d) The PKCS#7 object shall conform to the PKCS#7 specification in IETF RFC 2315 [2]. At minimum, it shall include the signer's X.509 signing certificate.

NOTE 1: Although ISO 32000-1 [1] also allows the value of the Contents entry of signature dictionary to be a DER-encoded PKCS#1 binary data object, that format is not supported by this profile.

- e) Timestamping and revocation information should be included in the PDF Signature. This revocation information and as much of the complete chain of certificates as is available should be captured and validated before completing the creation of the PDF Signature.
- f) If present, any revocation information shall be a signed attribute of the PDF Signature.
- g) IETF RFC 5755 [i.3] attribute certificates associated with the signer certificate should not be used.

NOTE 2: ISO 32000-1 [1] allows the inclusion of one or more IETF RFC 5755 [i.3] attribute certificates associated with the signer certificate. However, attribute certificates are not widely supported and hence use of this attribute will reduce interoperability.

- h) There shall only be a single signer (i.e. one single component of "SignerInfo" type within "signerInfos" element) in any PDF Signature.

SIST EN 319 142-2 V1.1.1:2016
<https://standards.ieee.org/catalog/standards/sist/8e8e6558-cc00-4bd1-80f0-2c52fa05867c/sist-en-319-142-2-v1-1-1-2016>

4.2.2 Requirements on PDF signature handlers

- a) A PDF reader may substitute a different signature handler, other than that specified in **Filter**, when validating the signature, as long as it supports the specified **SubFilter** format.
- b) Only the two values for **SubFilter** listed in ISO 32000-1 [1], clause 12.8.3.3.1 (i.e. **adbe.pkcs7.detached** and **adbe.pkcs7.sha1**) shall be used.

NOTE: While the names of the SubFilters can imply specific algorithms, the actual list of supported algorithms can be found in ISO 32000-1 [1], clause 12.8.3.3.2, table 257. Consult ETSI TS 119 312 [i.2] for guidance on algorithm choices.

The use of SHA-1 is being phased out and hence other hashing algorithms should be used.

4.2.3 Requirements on signature validation

When the user opens a signed document and requests validation of the signature(s) present in the PDF, a reader shall invoke the appropriate signature handler that shall perform the following steps to validate them.

- a) Validate that the document digest matches that in the signature as specified in ISO 32000-1 [1], clause 12.8.1.
- b) Validate the path of certificates used to validate the binding between the subject distinguished name and subject public key as specified in IETF RFC 5280 [3]. The validity checks shall be carried out at the time indicated either by electronic time-stamp applied as per clause 4.2.4 or some other trusted indication of the signing time. The revocation status shall be checked as specified in clause 4.2.5.
- c) To achieve consistent validation results with existing signatures and existing implementations of signature handlers, that did not know this attribute, the signing certificate reference attribute itself should be ignored during validation if present.
