Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 294-2:1996 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 9, *Thermoplastic materials*.

Plastics — Injection moulding of test specimens of thermoplastic materials —

Part 2: Small tensile bars

AMENDMENT 1

Page 1, Clause 2

Insert 1999 as the year of publication of ISO 11403-3 and delete the footnote.

Note that, at the time of publication of this amendment, ISO 8256:1990 was under revision. The revised edition was expected to be published during the course of 2004.

Page 2, Subclause 4.1

iTeh STANDARD PREVIEW

At the end of the Subclause, add the following:

(standards.iteh.ai)

- “h) Ejector pins, if used, shall be located outside the test area of the specimen, i.e. at the shoulders of the dumbbell specimens.”
