EUROPEAN STANDARD

EN 938

NORME EUROPÉENNE

EUROPÄISCHE NORM

May 2016

ICS 71.100.80

Supersedes EN 938:2009

English Version

Chemicals used for treatment of water intended for human consumption - Sodium chlorite

Produits chimiques utilisés pour le traitement de l'eau destinée à la consommation humaine - Chlorite de sodium

Produkte zur Aufbereitung von Wasser für den menschlichen Gebrauch - Natriumchlorit

This European Standard was approved by CEN on 18 March 2016.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

EN 938:2016 (E)**European foreword**

This document (EN 938:2016) has been prepared by Technical Committee CEN/TC 164 “Water supply”, the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2016, and conflicting national standards shall be withdrawn at the latest by November 2016.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 938:2009.

Significant technical differences between this edition and EN 938:2009 are as follows:

- a) deletion of reference to EU Directive 67/548/EEC of June 27, 1967 in order to take into account the latest Regulation in force (see [2]);
- b) use of the changed classification and labelling (see [2]).

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

In respect of potential adverse effects on the quality of water intended for human consumption, caused by the product covered by this European Standard:

- a) this European Standard provides no information as to whether the product may be used without restriction in any of the Member States of the EU or EFTA;
- b) it should be noted that, while awaiting the adoption of verifiable European criteria, existing national regulations concerning the use and/or the characteristics of this product remain in force.

NOTE Conformity with the standard does not confer or imply acceptance or approval of the product in any of the Member States of the EU or EFTA. The use of the product covered by this European Standard is subject to regulation or control by National Authorities.

EN 938:2016 (E)**1 Scope**

This European Standard is applicable to sodium chlorite used for treatment of water intended for human consumption. It describes the characteristics of sodium chlorite and specifies the requirements and the corresponding test methods for sodium chlorite. It gives information on its use in water treatment.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Description**3.1 Identification****3.1.1 Chemical name**

Sodium chlorite.

3.1.2 Synonym or common name

None.

3.1.3 Relative molecular mass

90,44.

3.1.4 Empirical formula

NaClO₂.

3.1.5 Chemical formula

Na-O-Cl = O.

3.1.6 CAS Registry Number ¹⁾

7758-19-2.

SIST EN 938:2016

¹⁾ Chemical Abstracts Service Registry Number.

3.1.7 EINECS reference ²⁾

231-836-6.

3.2 Commercial form

The product is supplied as a powder or as an aqueous solution of sodium chlorite.

3.3 Physical properties**3.3.1 Appearance**

The products are either a white powder or a greenish-yellow aqueous solution.

3.3.2 Density

The density of sodium chlorite solutions is given in Table 1.

Table 1 — Density of sodium chlorite solutions

| Aqueous solution concentration % (mass fraction) | Density g/ml at 20 °C |
|-----------------------------------------------------|--------------------------|
| 25 | 1,210 |
| 31 | 1,270 |

3.3.3 Solubility in water

The solubility of sodium chlorite depending on temperature is given in Table 2.

Table 2 — Solubility of sodium chlorite

| Temperature °C | Solubility g/l |
|-------------------|-------------------|
| 5 | 340 |
| 17 | 390 |
| 30 | 460 |
| 45 | 530 |
| 60 | 550 |

3.3.4 Vapour pressure

Not applicable.

3.3.5 Boiling point at 100 kPa ³⁾

Not applicable.

3.3.6 Crystallization point

The crystallization point of sodium chlorite depending on concentration is given in Table 3.

2) European Inventory of Existing Commercial Chemical Substances.

3) 100 kPa = 1 bar.

Table 3 — Crystallization point of sodium chlorite

| Aqueous solution concentration % (mass fraction) | Crystallization point °C |
|-----------------------------------------------------|-----------------------------|
| 25 | - 14,5 |
| 31 | 3 |

3.3.7 Specific heat

Not known.

3.3.8 Viscosity (dynamic)

The viscosity of sodium chlorite depending on concentration is given in Table 4.

Table 4 — Viscosity of sodium chlorite

| Aqueous solution concentration % (mass fraction) | Viscosity mPa.s at 20 °C |
|-----------------------------------------------------|-----------------------------|
| 25 | 2,33 |
| 31 | 3,26 |

3.3.9 Critical temperature

Not applicable.

3.3.10 Critical pressure

Not applicable.

3.3.11 Physical hardness

Not applicable.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

[SIST EN 938:2016](https://standards.iteh.ai/catalog/standards/sist/31c25e26-fb0b-4d24-8a45-56bd9df6a33f/sist-en-938-2016)

<https://standards.iteh.ai/catalog/standards/sist/31c25e26-fb0b-4d24-8a45-56bd9df6a33f/sist-en-938-2016>

3.4 Chemical properties

Sodium chlorite is a strong oxidizing agent. It generates chlorine dioxide with acidic solutions or chlorine and reacts with organic compounds.

4 Purity criteria**4.1 General**

This European Standard specifies the minimum purity requirements for sodium chlorite used for the treatment of water intended for human consumption. Limits are given for impurities commonly present in the product. Depending on the raw material and the manufacturing process other impurities may be present and, if so, this shall be notified to the user and when necessary to the relevant authorities.

Users of this product should check the national regulations in order to clarify whether it is of appropriate purity for treatment of water intended for human consumption, taking into account raw water quality, required dosage, contents of other impurities and additives used in the product not stated in the product standard.

Limits have been given for impurities and chemicals parameters where these are likely to be present in significant quantities from the current production process and raw materials. If the production process

or raw materials leads to significant quantities of impurities, by-products or additives being present, this shall be notified to the user.

4.2 Composition of commercial product

The sodium chlorite is available as a powder or as an aqueous solution with sodium chlorite content of 7,5 percent by mass fraction to 35 percent by mass fraction.

The content of sodium chlorite shall be equal to or greater than the manufacturer's declared value.

4.3 Impurities and main by-products

The product shall conform to the requirements specified in Table 5.

Table 5 — Impurities

| Impurity | Limit |
|------------------------------------------------------------------------|---------------------------------------------|
| | g/kg sodium chlorite 100 % mass fraction |
| Sodium chlorate (NaClO ₃) max. | 40 |
| Sodium nitrate (NaNO ₃) max. | 1 |
| NOTE Sodium chlorate can be a by-product of the manufacturing process. | |

4.4 Chemical parameters

NOTE For the purposes of this standard, "chemical parameters" are those defined in the EU Directive 98/83/EC of November 13, 1998 (see [1]).

The content of chemical parameters shall conform to the requirements specified in Table 6.

Table 6 — Chemical parameters

| Parameter | | Limit | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------------------------|--------|
| | | mg/kg sodium chlorite 100 % mass fraction | |
| | | Type 1 | Type 2 |
| Arsenic (As) | max. | 1,1 | 7,5 |
| Cadmium (Cd) | max. | 1,5 | 7,5 |
| Chromium (Cr) | max. | 1,1 | 7,5 |
| Mercury (Hg) | max. | 1,1 | 3,7 |
| Nickel (Ni) | max. | 1,1 | 7,5 |
| Lead (Pb) | max. | 1,1 | 7,5 |
| Antimony (Sb) | max. | 1,1 | 7,5 |
| Selenium (Se) | max. | 1,1 | 7,5 |
| NOTE Cyanide which does not exist in a strong oxidizing medium such as sodium chlorite is not a relevant chemical parameter. Pesticides and polycyclic aromatic hydrocarbons are not by-products of the manufacturing process. | | | |

5 Test methods

5.1 Sampling

5.1.1 General

Observe the general recommendations of ISO 3165 and take ISO 6206 into account.

5.1.2 Sampling from drums and bottles

5.1.2.1 General

5.1.2.1.1 Mix the contents of the container to be sampled by shaking the container, by rolling it or by rocking it from side to side, taking care not to damage the container or spill any of the liquid.

5.1.2.1.2 If the design of the container is such (for example, a narrow-necked bottle) that it is impracticable to use a sampling implement, take a sample by pouring after the contents have been thoroughly mixed. Otherwise, proceed as described in 5.1.2.3.

5.1.2.1.3 Examine the surface of the liquid. If there are signs of surface contamination, take samples from the surface as described in 5.1.2.2; otherwise, take samples as described in 5.1.2.3.

5.1.2.2 Surface sampling

Take a sample using a suitable ladle. Lower the ladle into the liquid until the rim is just below the surface, so that the surface layer runs into it. Withdraw the ladle just before it fills completely and allow any liquid adhering to the ladle to drain off. If necessary, repeat this operation so that, when the other selected containers have been sampled in a similar manner, the total volume of sample required for subsequent analysis is obtained.

[SIST EN 938:2016](https://standards.iteh.ai/catalog/standards/sist/31c25e26-fb0b-4d24-8a45-56bd9df6a33f/sist-en-938-2016)

5.1.2.3 Bottom sampling

<https://standards.iteh.ai/catalog/standards/sist/31c25e26-fb0b-4d24-8a45-56bd9df6a33f/sist-en-938-2016>

Take a sample using an open sampling tube, or a bottom-valve sampling tube, suited to the size of container and the viscosity of the liquid.

When using an open sampling tube, close it at the top and then lower the bottom end to the bottom of the container. Open the tube and move it rapidly so that the bottom of the tube traverses the bottom of the container before the tube is filled. Close the tube, withdraw it from the container and allow any liquid adhering to the outside of the tube to drain off.

When using a bottom-valve sampling tube, close the valve before lowering the tube into the container and then proceed in a similar manner to that when using an open sampling tube.

5.1.3 Sampling from tanks and tankers

From each access point, take samples as follows:

- a) from the surface of the liquid, using a ladle as described in 5.1.2.2;
- b) from the bottom of the tank or tanker, using a sampling tube as described in 5.1.2.3 or using a specially designed bottom-sampling apparatus;
- c) from one or more positions, depending on the overall depth, between the bottom and the surface using a weighted sampling can.
