Ref. No. ISO 235-1980 (E)

Descriptors : tools, twist drills, shanks, parallel shanks, Morse taper shanks, dimensions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 235 was developed by Technical Committee ISO/TC 29, *Small tools*. The first edition (ISO 235/1-1975) had been approved by the member bodies of the following countries :

Austria	India	Romania
Belgium	Italy	Sweden
Czechoslovakia	Mexico	Switzerland
France	Netherlands	United Kingdom
Germany, F. R.	Pakistan	USSR
Greece	Poland	
Hungary	Portugal

USA

This second edition, which superseded ISO 235/1-1975, incorporates draft Amendment 1, which was circulated to the member bodies in August 1978, and which has been approved by the member bodies of the following countries :

Australia	Israel	Spain
Austria	Italy	Sweden
Belgium	Japan	Switzerland
Chile	Korea, Dem. P. Rep. of	United Kingdom
China	Korea, Rep. of	USA
Czechoslovakia	Netherlands	USSR
France	Poland	Yugoslavia
Hungary	Romania	
India	South Africa, Rep. of	

The member body of the following country expressed disapproval of the document on technical grounds :

Germany, F. R.

Parallel shank jobber and stub series drills and Morse taper shank drills

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope and field of application

[ISO 235:1980](https://standards.iteh.ai/catalog/standards/iso/7359947e-5591-4464)

This International Standard lays down the dimensions of the following three types of drills :

- 1) parallel shank drills, stub series;
- 2) parallel shank drills, jobber series;
- 3) Morse taper shank drills.

It comprises, for each type of drill mentioned above, three tables giving respectively :

- a) the dimensions in millimetres;
- b) the dimensions in inches;
- c) the corresponding lengths, in millimetres and in inches, set out as functions of diameter steps.

2 Interchangeability

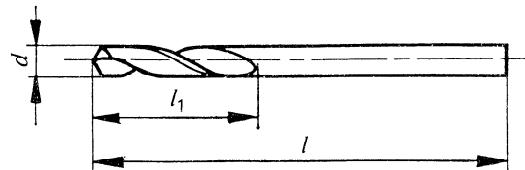

The numerical tables have been drawn up in such a way as to ensure that the standard dimensions in millimetres and inches correspond as closely as possible.

To this end, the complete range of diameters has been subdivided into a number of steps, the limits of which have been derived from the preferred number series for the metric values and converted directly from those for the inch values; the lengths and taper shank dimensions remain the same for the metric and the inch values within a given step.

The recommended diameters in the two systems of units of measurement differ, however, and the number of recommended diameters, in a given step, also differs in one system from that in the other.

Finally, the tolerance on the diameter of the cutting portion has been standardized solely on the basis of the metric values of h8, converted directly into inches for inch drills.

3 Parallel shank twist drills, stub series

NOTES relating to the tables in 3.1 and 3.2.

1 Intermediate sizes

When intermediate sizes are needed, reference should be made to the general table in 3.3 for the corresponding lengths.

2 Cutting portion

- Tolerance on diameter *d* measured near the point : h8.

For dimensions in inches, direct conversion into inches of the metric values of the tolerance h8.

- Back taper : at the manufacturer's discretion.
- Hand of cutting, unless otherwise specified : right.

3 Shank

These drills are normally made without driving tenon.

4 Tolerance on lengths

See general table in 3.3.

3.3 General table : Corresponding lengths, in millimetres and in inches, set out as functions of diameter steps

NOTES

1 Tolerance on lengths

Lengths l and l_1 may vary, within one diameter step, between the minimum and maximum limits corresponding respectively to the figures given for the nearest lower or upper step. (See as examples the note under 4.3 and 5.3.)

2 Standardized diameters in millimetres and in inches : see the tables in 3.1 and 3.2.

4 Parallel shank twist drills, jobber series

NOTES relating to the tables in 4.1 and 4.2.

1 Intermediate sizes

When intermediate sizes are needed, reference should be made to the general table in 4.3 for the corresponding lengths.

2 Cutting portion

- Tolerance on diameter d measured near the point : h8.

For dimensions in inches, direct conversion into inches of the metric values of the tolerance h8.

- Back taper : at the manufacturer's discretion.
- Hand of cutting, unless otherwise specified : right.

3 Shank

These drills are normally made without driving tenon.

4 Tolerance on lengths

See general table in 4.3.

4.3 General table : Corresponding lengths, in millimetres and in inches, set out as functions of diameter steps

Diameter ranges d				Corresponding lengths

NOTES

1 Tolerance on lengths

Lengths l and l_1 may vary, within one diameter step, between the minimum and maximum limits corresponding respectively to the figures given for the nearest lower or upper step.

Example : For the diameter 4 mm, length l_1 may vary between 39 and 47 from the nominal value 43 mm, and length l may vary between 70 and 80 from the nominal value 75 mm.

2 Standardized diameters in millimetres and in inches : see the tables in 4.1 and 4.2.
