## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Open Radio equipment Interface (ORI).

The present document is part 2 of a multi-part deliverable covering the ORI Interface Specification, as identified below:

Part 1: "Low Layers (Release 3);

**Part 2: "Control and Management (Release 3)".**

iteh STANDARD PREVIEW  
(standards.iteh.ai)  
Full standard:  
<https://standards.iteh.ai/catalog/standards/sist/3b890078-9203-4264-b476-6f80cb64321e/etsi-gs-ori-002-2-v3.1.1-2014-03>

---

## 1 Scope

The present document aims to define Control and Management plane functions and protocols, addressing, message format and coding of the Open Radio equipment Interface (ORI) for Release 3.

---

## 2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

**active link:** See definition in [2].

**active software image:** software image that is currently being executed on the RE

**Antenna Line Device (ALD):** See definition in [12].

**Antenna-Carrier (AxC):** See clause 2.1 of [1].

**DHCP client:** See definition in [16].

**DHCP server:** See definition in [16].

**FTP password:** See definition in [14].

**FTP server IP address:** See definition in [14].

**FTP username:** See definition in [14].

**universally unique MAC address:** 48 bit universally administered, globally unique identifier in compliance with MAC-48/EUI-48 format assigned to a network interface, as defined in IEEE Std 802-2001 [4]

**HDLC control octet:** See definition in [15].

**I-frame:** See definition in [15].

**networking RE:** See definition in [2].

**ORI line bit rate:** See definition in [3].

**ORI link:** See definition in [2].

**ORI port:** See definition in [2].

**passive link:** See definition in [2].

**passive software image:** software image that is not currently being executed on the RE

**radio standard:** standardized radio access technology

EXAMPLE: UMTS, LTE, GSM.

**Received Total Wideband Power (RTWP):** See [13].

**software image:** software stored on the RE as a result of a successful software upgrade that is compatible with the RE hardware version

**software upgrade package version identifier:** information exchanged between the REC and the RE to identify the Software Upgrade Package

**software upgrade package:** unique set of (one or several) files provided by the RE vendor for the purpose of performing a software upgrade of one or more RE hardware versions provided by the same RE vendor, and associated with a maximum of one Software Image on the RE

NOTE 1: The RE vendor should provide flexibility for supporting Software Upgrade Packages containing software for multiple hardware versions and Software Upgrade Packages containing software for a single Hardware version.

NOTE 2: Even if one of the files of a set changes, a new software upgrade package is created.

**TCP socket:** See definition in [18].

**transceiver module:** module that may be used to connect the internal circuits of the RE to the Layer 1 (see GS ORI 002-1 [3]) of the ORI link

**Uplink Automatic Gain Control (UL AGC):** See definition in [3].

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

AxC	Antenna-Carrier
Rx	Receiver
Tc	UTRA FDD chip period (1/3,84 MHz)
T <sub>HCI</sub>	Health Check Idle timer

T <sub>TLM</sub>	TCP Link Monitoring Timer
Tx	Transmitter

### 3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

3GPP	3 <sup>rd</sup> Generation Partnership Project
AGC	Automatic Gain Control
AISG	Antenna Interface Standards Group
ALD	Antenna Line Device
ASCII	American Standard Code for Information Interchange
ARP	Address Resolution Protocol
AST	Administrative STate
AxC	Antenna-Carrier
C&M	Control & Management
CET	Central European Time
CPRI	Common Public Radio Interface
DHCP	Dynamic Host Control Protocol
DL	DownLink
EARFCN	E-UTRA Absolute Radio Frequency Channel Number
EBNF	Extended Backus-Naur Form
E-UTRA	Evolved-UMTS Terrestrial Radio Access
FCS	Frame Check Sequence
FDD	Frequency Division Duplex
FST	Functional STate
FTP	File Transfer Protocol
GSM	Global System for Mobile communications (Groupe Spécial Mobile)
HDLC	High Level Data Link Control
HFN	Hyper Frame Number

NOTE: As defined in [1].

ID	IDentifier
IE	Information Element
IETF	Internet Engineering Task Force
IP	Internet Protocol
IQ	In-phase data and Quadrature data
KPI	Key Performance Indicator
LAN	Local Area Network
LED	Light Emitting Diode
LOF	Loss Of Frame
LOS	Loss Of Signal
MAC	Media Access Control
MIMO	Multiple-Input Multiple-Output
MTU	Maximum Transmission Unit
O&M	Operations & Maintenance
OCP	ORI C&M Protocol
ORI	Open Radio Interface
OS	Operating System
PA	Power Amplifier
RAI	Remote Alarm Indication
RE	Radio Equipment
REC	Radio Equipment Controller
RF	Radio Frequency
RMS	Root Mean Square
RO	Read-Only
RTWP	Received Total Wideband Power
RW	Read Write
SAP	Service Access Point
SDI	SAP Defect Indication

SSH	Secure SHell
TCP	Transmission Connection Protocol
TMA	Tower-Mounted Amplifier
UARFCN	UTRA Absolute Radio Frequency Channel Number
UDP	User Datagram Protocol
UID	Unique IDentifier
UL AGC	Uplink Automatic Gain Control
UL	UpLink
UTC	Coordinated Universal Time
UTF	Unicode Transformation Format
UTRA	UMTS Terrestrial Radio Access
VSWR	Voltage Standing Wave Ratio
XID	eXchange Identification

NOTE: As defined in [15].

XML	eXtensible Markup Language
XSD	XML Schema Definition

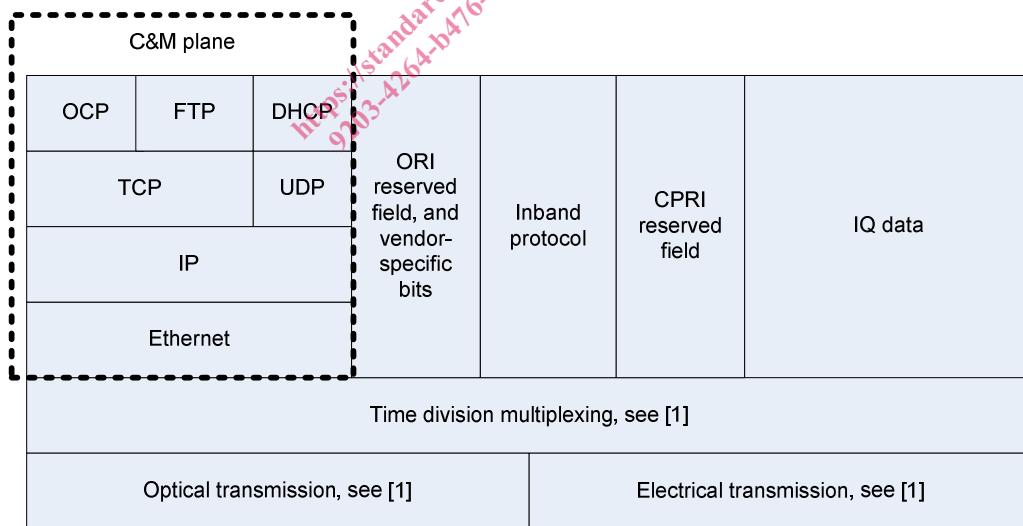

## 4 Introduction

The present document is a subset of the ORI Release 3 specifications.

## 5 C&M plane description

### 5.1 Protocol stack

The C&M plane protocol stack that shall be supported by REC and RE within the overall ORI protocol stack, is shown in figure 5.1-1 and complies with [1], clause 4.1.

**Figure 5.1-1: ORI protocol stack highlighting C&M plane**

The IQ data, CPRI reserved field, Vendor-specific bits (a subset of which are used for the ORI reserved field), and Inband protocol, are as defined in [1]. The ORI reserved field itself is defined in [3].

The use of Ethernet, IP, TCP, DHCP, FTP and OCP (ORI C&M Protocol) within the C&M plane is described in clause 5.2.

Further details of OCP are defined in clauses 7, 8 and 10.
