This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/CLC/TC 5.

If this draft becomes a European Standard, CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN and CENELEC in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN and CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation. Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European Foreword

This document (prEN 16602-70-39:2016) has been prepared by Technical Committee CEN/CLC/TC 5 “Space”, the secretariat of which is held by DIN (Germany).

This document (prEN 16602-70-39:2016) originates from ECSS-Q-ST-70-39C.

This document is currently submitted to the CEN Enquiry.

This document has been developed to cover specifically space systems and will therefore have precedence over any EN covering the same scope but with a wider domain of applicability (e.g. : aerospace).

iTeh STANDARD PREVIEW
(standards.iteh.ai)

SIST EN 16602-70-39:2019

<https://standards.iteh.ai/catalog/standards/sist/52e65224-dbd4-433f-bdf9-b84a32865664/sist-en-16602-70-39-2019>

1

Scope

This Standard specifies the processing and quality assurance requirements for the different types of metallic welding (manual, automatic, semi-automatic and machine) for space flight applications. This standard can also be used for weld activities on space related ground equipment and development models for flight hardware. The Standard covers all welding processes used for joining metallic materials for space applications. This includes, but is not limited to:

- Gas Tungsten Arc Welding (GTAW) / Tungsten Inert Gas (TIG), (process 14)
- Gas Metal Arc Welding (GMAW) / Metal Inert Gas (MIG) (process 13)
- Plasma Arc Welding (PAW) / Plasma of Transferred Arc (PTA), (process 15)
- Electron beam welding (EBW), (process 51)
- Laser beam welding (LBW), (process 52)
- Friction Stir welding (process 43)
- Magnetic Pulse welding (process 442)
- Linear friction welding (process 42)
- Rotary friction welding (process 42)

The specific process numbers mentioned above are listed according to the standard ISO 4063:2009.

This Standard does not detail the weld definition phase and welding pre-verification phase, including the derivation of design allowables.

This standard may be tailored for the specific characteristic and constraints of a space project in conformance with ECSS-S-ST-00.

Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this ECSS Standard. For dated references, subsequent amendments to, or revision of any of these publications do not apply. However, parties to agreements based on this ECSS Standard are encouraged to investigate the possibility of applying the more recent editions of the normative documents indicated below. For undated references, the latest edition of the publication referred to applies.

Terms, definitions and abbreviated terms

3.1 Terms from other standards

- a. For the purpose of this Standard, the terms and definitions from ECSS-S-ST-00-01 apply and in particular the following:
 1. critical
- b. For the purpose of this Standard, the terms and definitions from ECSS-E-ST-32-01 apply.
 1. fail-safe

3.2 Terms specific to the present standard

3.2.1 acceptable weld

weld that has no defects and passes all acceptance criteria

3.2.2 all weld metal tensile test specimen

test specimen with the reduced section composed of only weld metal

3.2.3 alpha sample

weld sample produced prior to the start of a production run, used to verify selected aspects of the quality of the weld to be produced during production

NOTE The term "pre-weld sample" is synonymous.

3.2.4 base metal

part of the welded joint which remains un-melted or un-stirred for friction stir welding, and unaffected by the heat of the process, such that the microstructure and mechanical properties are unaffected

3.2.5 beta sample

weld sample produced at the end of a production run, used to verify selected aspects of the quality of the weld to be produced during production

NOTE The term "post-weld sample" is synonymous.

3.2.6 critical structure

structure or component, the single failure of which cause significant danger to personnel, loss of system, loss of major component, or loss of control, thus resulting in an operation penalty, or loss of the system, or abortion of the mission

prEN 16602-70-39:2016 (E)

3.2.7 defect

<CONTEXT: welding>
unacceptable feature of the weld

NOTE This term is defined in the present standard with a different meaning than in ECSS-S-ST-00-01. The term with the meaning defined herein is applicable only to the present standard.

3.2.8 delta verification

welding trials performed to extend the range of a previously approved WPS

3.2.9 design authority

responsible for the detailed design of the welded part in compliance to an approved specification and authorized to sign certificates of design or certified sealed drawings in accordance with procedures

3.2.10 engineering authority

contracting agency or corporate organisation that acts for and on behalf of the customer and responsible for the structural integrity or maintenance of airworthiness of the hardware and compliance with all business agreement documents

3.2.11 fabrication

structure manufactured by assembling various parts together

3.2.12 feature

geometric or microstructural non-uniformity in the weld or weld zone

3.2.13 filler metal

metal supplied in the form of a welding rod, sometimes flux coated, melted by a heat source into a joint between components to be joined

3.2.14 heat affected zone (HAZ)

portion of the base metal that was not melted during fusion welding or stirred during friction stir welding but whose microstructure and mechanical properties were altered by the heat applied during the welding process

3.2.15 hybrid welding

type of welding process that combines the principles of laser beam welding and arc welding

3.2.16 in process correction

see "re-weld"

3.2.17 job card

see "shop traveller"

3.2.18 machine welding

welding with equipment that performs the welding operation

3.2.19 maintenance book

record of maintenance performed on equipment including any modifications

3.2.20 manual welding

welding operation performed and controlled completely by hand

3.2.21 mission critical

item whose failure generates a significant operational impact by jeopardizing the ability to successfully complete the assigned mission.

NOTE This includes parts which have failure effects that adversely impact mission effectiveness.

3.2.22 non-critical structure

structure or component which is non-critical and is contained so that failure does not affect other flight elements or personnel

3.2.23 piece part

individual metallic parts to be welded

NOTE The term of "piece part" is commonly used in welding. Examples are: sheets, plates and extrusions.

3.2.24 post weld sample

see "beta sample"

3.2.25 process

<CONTEXT: welding>

material or joint type and dimension or welding process combination which is covered by a WPS

NOTE This term is defined in the present standard with a different meaning than in ECSS-S-ST-00-01. The term with the meaning defined herein is applicable only to the present standard.

3.2.26 production run

welding run corresponding to the same sample coupons, the same material lot and the same thermal treatment, pre- or post- batch as the flight or production hardware itself

3.2.27 re-acceptance

welding activities aimed to assure the obtaining of the previously verified and qualified results

3.2.28 repair welding

additional welding pass which is only allowed after the defective weld has resulted in an major NCR, and then only released by the welding supervisor

3.2.29 re-weld

additional weld pass according to a qualified weld procedure to eliminate defects
