Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 16367 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 8, *Tools for pressing and moulding*.

This second edition cancels and replaces the first edition (ISO 16367:2001) which has been technically revised. (standards.iteh.ai)

Tools for pressing — Guide plates — U- and V-blocks

1 Scope

This International Standard specifies the main dimensions and tolerances of guiding plates, U- and V-blocks, to be used in press tools.

It also specifies the designation of U- and V-blocks.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 2768-1, General tolerances of Part 1. Tolerances for linear and angular dimensions without individual tolerance indications

ISO 4762, Hexagon socket head cap screws

ISO 8733, Parallel pins with internal thread, of unhardened steel and austenitic stainless steel https://standards.iteh.ai/catalog/standards/sist/544b2a5b-ad30-44b7-96ab-

ISO 13715, Technical drawings — Edges of Undefined shape US Vocabulary and indications

3 Dimensions

3.1 Type U female block

The dimensions of type U female block shall conform to the indications in Figure 1 and Table 1.

All edges of undefined shape shall be in accordance with ISO 13715.

General tolerance: ISO 2768m dimensions in millimetres surface roughness values in micrometers
