Klemmprüfung mit Kabelbindern

This European Standard was approved by CEN on 29 July 2016.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## European foreword

This document (EN 3745-517:2017) has been prepared by the Aerospace and Defence Industries Association of Europe - Standardization (ASD-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of ASD, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2017, and conflicting national standards shall be withdrawn at the latest by September 2017.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 3745-517:2012.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

**EN 3745-517:2017 (E)****1 Scope**

This European Standard specifies a method of determining the attenuation variation of an optical cable when clamped to a mandrel with cable ties, simulating the condition in an installed harness.

**2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 2591-100, *Aerospace series — Elements of electrical and optical connection — Test methods — Part 100: General*

EN 3745-201, *Aerospace series — Fibres and cables, optical, aircraft use — Test methods — Part 201: Visual examination*

EN 3745-301, *Aerospace series — Fibres and cables, optical, aircraft use — Test methods — Part 301: Attenuation*

EN 4056-003, *Aerospace series — Cable ties for harnesses — Part 003: Plastic cable ties, operating temperatures - 65 °C to 105 °C and - 65 °C to 150 °C — Product standard*

**3 Preparation of specimens**

**STANDARD PREVIEW**  
(standards.iteh.ai)

**3.1** The fibre ends shall conform to the fibre end preparation criteria specified in EN 2591-100.

**3.2** The length of fibre to be tested shall be in accordance with the applicable product standard.

**3.3** The specimens shall be subjected to standard test conditions and stabilized at these conditions for 24 h as defined in EN 2591-100.

**3.4** The following details shall be specified if not already included in the product standard.

- Minimum number of cable ties, 6.
- Spacing between the cable ties shall be defined. If not the distance shall be 150 mm.
- Setting of the cable tie fitting tool.
- Mandrel diameter.
- Number of specimens (minimum 3)

The wavelengths to be measured if not 1300 nm and 850 nm.

## 4 Apparatus

- A Light Launch System (LLS) and Light Detection System (LDS) as defined in EN 2591-100.
- A mandrel with a diameter specified in the applicable product standard.

A typical arrangement is shown in Figure 1.

### Key

- 1 Fibre optic cable
- 2 Cable tie
- 3 Mandrel

Cross sectional view

### Key

- 1 Mandrel
- 2 Fibre optic cable
- 3 Head of cable tie shall be positioned on the mandrel

Figure 2

**EN 3745-517:2017 (E)****5 Method****5.1 Procedure**

- a) Measure and record the optical transmittance of the specimen for both wavelengths 850 nm and 1300 nm while the specimen is aligned on the test mandrel to establish a reference measurement.
- b) Apply the specified number of cable tie type EN 4056-003 type 1, size code S or equivalent to the cable sample under test and mandrel, as shown in Figure 2. The cable ties are to be positioned at distance specified in the product standard or at 150 mm if not specified.
- c) Using the applicable fitting tool specified in MS 90387 for the size of cable tie being used, tighten the cable tie to the required tension as detailed in the product standard. The head of the cable tie shall be located according to Figure 2.
- d) Leave the assembly to stand for 15 minutes (to allow the cable tie to relax) then measure and record the final optical transmittance of the specimen at both wavelengths 850 nm and 1300 nm.
- e) After completing section d), remove the cable ties and measure the final optical transmittance of the specimen at both wavelengths 850 nm and 1300 nm when the specimen is removed from the test fixture.

**5.2 Final measurements and requirements**

Measure the initial and residual attenuation variation using EN 3745-301, method C. Starting with a reference measurement before setting up the test assembly. After the period of test remove the specimen from the test fixture and take a second measurement within one minute. Take a final reading after 1 h to determine residual attenuation, if any.

Perform a visual examination according to EN 3745-201.
