Stranggepreßte Stangen, Rohre und Profile -  
Teil 2: Mechanische Eigenschaften

This European Standard was approved by CEN on 1997-03-10. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

https://standards.iteh.ai/standard/standards/sist/780cf2ba-6cf5-4ec8-b279-dbtu-1998/standards/sist-en-755-2-1998  
 755-2:1998

## Foreword

This European Standard has been prepared by Technical Committee CEN/TC 132 "Aluminium and aluminium alloys", the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 1997, and conflicting national standards shall be withdrawn at the latest by October 1997.

Within its programme of work, Technical Committee CEN/TC 132 entrusted CEN/TC 132/WG 5 "Extruded and drawn products" to prepare the following standard :

EN 755-2            Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 2 : Mechanical properties

This standard is part of a set of nine standards. The other standards deal with :

EN 755-1            Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 1 : Technical conditions for inspection and delivery

EN 755-3            Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 3 : Round bars, tolerances on dimensions and form

EN 755-4            Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 4 : Square bars, tolerances on dimensions and form

EN 755-5            Aluminium and aluminium alloys - Extruded rod/bar, tube and profile -  
                            Part 5 : Rectangular bars, tolerances on dimensions and form

EN 755-6            Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 6 : Hexagonal bars, tolerances on dimensions and form

prEN 755-7          Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 7 : Seamless tubes, tolerances on dimensions and form

prEN 755-8          Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 8 : Porthole tubes, tolerances on dimensions and form

prEN 755-9          Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles -  
                            Part 9 : Profiles, tolerances on dimensions and form

According to the [CEN/CENELEC Internal Regulations](https://standards.mechanika.sist/standards/sist/00154400-0279), the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

## 1 Scope

This part of EN 755 specifies the mechanical property limits applicable to aluminium and aluminium alloy extruded rod/bar, tube and profile.

Temper designations are defined in EN 515. The numerical designation system of alloys is specified in EN 573-1. The chemical symbol based designation system is specified in EN 573-2. The chemical composition limits for these materials are given in EN 573-3. Mechanical property limits are specified for all Class "A" alloys as defined in EN 573-4.

## 2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

EN 515	Aluminium and aluminium alloys - Wrought products - Temper designations
EN 573-1	Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 1 : Numerical designation system
EN 573-2	Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 2 : Chemical symbol based designation system
EN 573-3	Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 3 : Chemical composition
EN 573-4	Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 4 : Forms of products
EN 755-1	Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles - Part 1 : Technical conditions for inspection and delivery
EN 2004-1	Aerospace series - Test methods for aluminium and aluminium alloy products - Part 1: Determination of electrical conductivity of wrought aluminium alloys <i>iTeh STANDARD PREVIEW</i> SIST EN 755-2:1998 Metallic materials and their products - Tensile testing - Part 1: Method of test (at ambient temperature)
EN 10002-1	<a href="https://standardsatis.com/standard/755-2-1998/part-1-method-of-test-at-ambient-temperature/">https://standardsatis.com/standard/755-2-1998/part-1-method-of-test-at-ambient-temperature/</a>
ISO 9591	Corrosion of aluminium alloys - Determination of resistance to stress corrosion cracking
ASTM G 47	Standard test method for determining susceptibility to stress-corrosion cracking of high-strength aluminium alloy products

### 3 Requirements

The mechanical properties shall be in conformity with those specified in clause 5 or those agreed upon between supplier and purchaser and stated in the order.

### 4 Tensile test

The selection, preparation and number of specimens and test pieces, are specified in EN 755-1.

Tensile testing shall be carried out as specified in EN 10002-1.

#### 4.1 Test direction

All products shall be tested in the longitudinal direction in order to provide guaranteed mechanical properties.

Tests in other directions may be carried out. However these and mechanical properties shall be agreed between supplier and purchaser and shall be stated on the order. It should be noted that the mechanical properties obtained can differ from those for the longitudinal direction quoted in this standard.

#### 4.2 Elongation values

The  $A_{50\text{ mm}}$  value is the elongation measured over a gauge length of 50 mm and expressed in percent.

The A value for elongation is the % elongation measured over a gauge length of  $5,65\sqrt{S_0}$  (where  $S_0$  is the initial cross-sectional area of the test-piece), and expressed in percent.

##### a) Extruded rod/bar

the  $A_{50\text{ mm}}$  value shall be used for rectangular rod/bar tested in the full thickness up to 12,5 mm thickness ;

iTeh STANDARD PREVIEW  
the A value shall be used for all other test pieces.  
(standards.iteh.ai)

##### b) Extruded tube

SIST EN 755-2:1998

the  $A_{50\text{ mm}}$  value shall be used for tube tested in the full section and the sheet type specimens taken from tube having either a flat or a curved wall up to and including 12,5 mm thick ;

the A value shall be used for round test pieces machined from wall thicknesses over 12,5 mm.

c) Extruded profile

the  $A_{50\text{ mm}}$  value shall be used for shapes tested in full section and for sheet type specimens machined from material up to and including 12,5 mm in thickness having parallel surfaces ;

the A value shall be used for round test specimens machined from material thicknesses over 12,5 mm.
