## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 24631-1 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 19, *Agricultural electronics*.

ISO 24631 consists of the following parts, under the general title *Radiofrequency identification of animals*:

- *Part 1: Evaluation of conformance of RFID transponders with ISO 11784 and ISO 11785 (including granting and use of a manufacturer code)* [ISO 24631-1:2009](https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-c871ace99bc9/iso-24631-1-2009)
- *Part 2: Evaluation of conformance of RFID transceivers with ISO 11784 and ISO 11785*
- *Part 3: Evaluation of performance of RFID transponders conforming with ISO 11784 and ISO 11785*
- *Part 4: Evaluation of performance of RFID transceivers conforming with ISO 11784 and ISO 11785*

## Introduction

ISO has appointed ICAR (International Committee for Animal Recording) as the registration authority (RA) competent to register manufacturer codes used in the radiofrequency identification (RFID) of animals in accordance with ISO 11784 and ISO 11785.

ISO 24631 defines means, based upon ICAR test procedures<sup>[1]</sup>, for evaluating and verifying both the conformance and performance of RFID devices in respect of ISO 11784 and ISO 11785. Only those results emanating from RA-approved test centres are recognized.

This part of ISO 24631 deals with the conformance of RFID transponders, of which the four main types used for animal identification are

- injectable transponders,
- electronic ear tag transponders,
- electronic ruminal bolus transponders, and
- tag attachments.

# Radiofrequency identification of animals —

## Part 1: Evaluation of conformance of RFID transponders with ISO 11784 and ISO 11785 (including granting and use of a manufacturer code)

### 1 Scope

This part of ISO 24631 provides the means of evaluating the conformance with ISO 11784 and ISO 11785 of RFID (radiofrequency identification) transponders used in the individual identification of animals. It sets forth the conditions for the granting and use of the manufacturer code related to a transponder and the associated rights and obligations of the parties involved in the issuance of the code.

The test procedures specified in this part of ISO 24631 are recognized by the FECAVA (Federation of European Companion Animals Veterinary Association) and WSAVA (World Small Animal Veterinarian Association) and, as such, can be applied also to companion animals.

### 2 Conformance

Test centres approved by the registration authority (RA) shall perform transponder testing using the procedures specified in Clause 7 and shall report the test results to the RA. These tests are in accordance with the technical requirements of ISO 11784 and ISO 11785. The manufacturer shall apply for transponder testing by completing and submitting to the RA the application form provided in Annex A, while agreeing to abide by the code of conduct set forth in Annex B. Approval depends on the transponder product passing the tests of Clause 7. A product code consisting of a manufacturer code and serial number is issued to a transponder that is approved by the RA. The conditions attached to use of this approval by the manufacturer are laid down in Annex C.

Transponders for which conformance with ISO 11784 is claimed shall carry a numeric-3 code in accordance with ISO 3166-1, where numbers up to 900 refer to countries and numbers from 900 to 998 indicate individual manufacturers.

Use of a manufacturer code is only permitted the manufacturer who has been issued that code by the RA. The application form for obtaining the manufacturer code is presented in Annex D, while the rules for its granting and use are set forth in Annex E.

### 3 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 3166-1, *Codes for the representation of names of countries and their subdivisions — Part 1: Country codes*

ISO 11784, *Radio frequency identification of animals — Code structure*

ISO 11785:1996, *Radio frequency identification of animals — Technical concept*

ERC recommendation 70-03, *Relating to the Use of Short Range Devices (SRD)*<sup>1)</sup>

## 4 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

- 4.1 country code**  
three-digit numeric code representing a country in accordance with ISO 3166-1
- 4.2 identification code**  
code used to identify the animal individually, at the national and, in combination with a country code, international levels
- NOTE It is a national responsibility to ensure the uniqueness of national ID codes.
- 4.3 laboratory activation field**  
electromagnetic field with a frequency of 134,2 kHz and a magnetic field strength according to ERC Recommendation 70-03
- 4.4 laboratory reference transceiver**  
transceiver used to test the transponders generating the laboratory activation field, able to read FDX-B and HDX transponders
- 4.5 manufacturer**  
company that submits an application for conformance testing or for the granting and use of a manufacturer code for transponders in conformance with ISO 11784 and ISO 11785 while accepting the conditions set forth in Annexes B, C and E
- 4.6 manufacturer code**  
**MFC**  
three-digit number granted by the RA to a manufacturer under the conditions set forth in Annex E, whose range and placement within the code structure are in accordance with ISO 11784
- NOTE Only one manufacturer code is granted to the same manufacturer.
- 4.7 primary transponder packaging**  
primary protective layer of transponder components
- 4.8 product code**  
six-digit number granted by the registration authority to a manufacturer for a certain type of transponder, formatted such that its first part is the manufacturer code and second part a three-digit serial number

---

1) CEPT (Conférence Européenne des Administrations des Postes et des Télécommunications) publication.

**4.9****purchaser**

person, organization or company that receives legal ownership of equipment by a transaction involving that equipment

**4.10****RA-approved test centre**

accredited test centre meeting the criteria of the registration authority

NOTE Accreditation: third-party attestation related to a conformity assessment body conveying formal demonstration of its competence to carry out specific conformity assessment tasks (see Reference [2]).

**4.11****RA-approved transponder**

transponder approved by the registration authority

**4.12****RA-registered manufacturer**

manufacturer with one or more RA-approved transponders

**4.13****registration authority****RA**

entity that approves test laboratories and issues and registers manufacturer and product codes

**4.14****retagging**

process that assigns to a new transponder the same identification number as a transponder that has been lost or that is no longer readable

**4.15****retagging counter**

three-bit field for counting the number of retagging

**iTeh STANDARD PREVIEW**  
(standards.iteh.ai)

ISO 24631-1:2009  
<https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-c871ac99b79/iso-24631-1-2009>

**4.16****shared manufacturer code**

three-digit number granted by the registration authority to a manufacturer according to Annex E

NOTE A shared manufacturer code can be granted to more than one manufacturer.

**4.17****secondary transponder packaging**

additional layers to primary transponder packaging

**4.18****transceiver**

device used to communicate with the transponder

**4.19****transponder**

radio frequency identification (RFID) device that transmits its stored information when activated by a transceiver and that may be able to store new information

NOTE A transponder can be characterized according to its components (chip, coil, capacitor, etc.), communication protocol, size, shape and packaging, or any additional characteristics that could change its properties. The main types are defined in 4.19.1 to 4.19.4 below.

**4.19.1**

**injectable transponder**

small transponder able to be injected into an animal's body and encapsulated in a biocompatible and non-porous material such as glass

**4.19.2**

**electronic ear tag transponder**

plastic-covered transponder able to be fixed to the ear of the animal using a locking mechanism or to be attached to an ear tag such that it cannot be removed from the tag without damaging it

**4.19.3**

**electronic ruminal bolus transponder**

transponder placed into a high specific gravity container able to be orally administered to a ruminant, which remains permanently in its fore stomach

**4.19.4**

**tag attachment**

transponder components covered by a primary protection layer and meant for producing one or more of the three other main transponder types or other types of animal transponder

**4.20**

**user information field**

five-bit field for additional user information, used only in conjunction with the country code

**5 Abbreviated terms**

**iTeh STANDARD PREVIEW**

CRC cyclic redundancy check

**(standards.iteh.ai)**

FDX-B full duplex communication protocol (conforming to ISO 11785, excluding protocols mentioned in ISO 11785:1996, Annex A)

[ISO 24631-1:2009](https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-ISO 24631-1:2009)

[https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-](https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-c871aee99bc9/iso-24631-1-2009)

HDX half duplex communication protocol [c871aee99bc9/iso-24631-1-2009](https://standards.iteh.ai/catalog/standards/sist/b85eb981-9c1b-4e93-b723-c871aee99bc9/iso-24631-1-2009)

MFC manufacturer code

RA registration authority

RFID radiofrequency identification

**6 Application**

**6.1** The manufacturer may apply for either a full or limited test or for a listing update.

**a) Full test — Category A**

Applicable when:

- 1) a manufacturer is not yet registered by the RA (no tested product and no MFC);
- 2) an RA-registered manufacturer uses new silicon (integrated circuit) or new technology (HDX or FDX-B) in the transponder;
- 3) an RA-registered manufacturer changes his coil technology (ferrite vs. air coils).

**b) Limited test — Category B**

Applicable when:

- 1) an RA-registered manufacturer inserts previously RA-approved transponder hardware (silicon plus coil) into a different primary transponder packaging material;

- 2) an RA-registered manufacturer uses the silicon of an RA-approved transponder with different coil dimensions;
- 3) an RA-registered manufacturer inserts an RA-approved transponder with its original primary packaging in a different secondary packaging (e.g. glass transponder in a bolus or in an ear tag).

### c) Listing update — Category C

Applicable when an RA-registered manufacturer intends to use an RA-approved transponder without modification.

The applicant shall deliver a copy of the original test report and a written confirmation from the RA-registered manufacturer who originally submitted the transponder in question for approval.

**6.2** The application submitted to the RA shall consist of a covering letter, the application form presented in Annex A and the signed code of conduct set forth in Annex B. The RA shall confirm receipt of the application to the manufacturer within two weeks. By signing the application form and the code of conduct, the manufacturer agrees to fulfil the provisions of this part of ISO 24631.

**6.3** The test centre shall be approved by the RA.

**6.4** The RA maintains a list of approved test centres, from which the manufacturer may choose the centre that will test his transponder product.

**6.5** The manufacturer shall provide the RA-approved test centre with 50 transponders of the same type and model for a full test, or 10 transponders of the same type and model for a limited test or listing update. The transponders shall carry the country code “999” (indicating a test transponder) or the manufacturer’s code if existent. The manufacturer may freely choose the identification codes, but duplicated numbers are not allowed. The manufacturer shall provide a list of the transponder codes in decimal representation.

**6.6** The RA-approved test centre shall verify the transponders using the test procedures specified in Clause 7. All tested transponders shall be readable by the laboratory reference transceiver. The codes read shall match the codes provided by the manufacturer.

**6.7** The RA-approved test centre shall prepare a confidential report of the results and shall send two copies (and an electronic version) of the report to the chairman of the RA.

**6.8** The RA chairman shall inform the manufacturer of the test results in a letter together with a copy of the report.

**6.9** The RA shall issue a product code for each conformant transponder type and model.

**6.10** The tested transponders shall be kept by the RA-approved test centre, under the ownership of the RA.

**6.11** The RA shall make publicly available a list of conformant transponder models in any of the three application categories [6.1, a), b) and c)]. A photograph of the approved transponder shall be included in the list.

**6.12** The RA shall do everything within its power to protect the integrity of this procedure with regard to ISO 11784 and ISO 11785.

## 7 Test procedures

### 7.1 General

The applicability of a particular test procedure depends on whether a full (category A) or limited (category B) test or listing update (category C) is required (see 6.1).
