Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 355 was prepared by Technical Committee ISO/TC 4, *Rolling bearings*, Subcommittee SC 9, *Tapered roller bearings*.

iTeh STANDARD PREVIEW

This second edition cancels and replaces the first edition (ISO 355:1977), which has been technically revised. ISO 355:1977/Add. 1:1980 and ISO 355:1977/Add. 2:1980 have been incorporated.

Rolling bearings — Tapered roller bearings — Boundary dimensions and series designations

1 Scope

This International Standard specifies bearing and subunit boundary dimensions for complete single-row and double-row tapered roller bearings. It also specifies the flange dimensions of flanged outer rings for a selection of these bearings. A series designation for each bearing is also specified.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 492:2002, *Rolling bearings — Radial bearings — Tolerances*

ISO 582:1995, *Rolling bearings — Chamfer dimensions — Maximum values*

ISO 1132-1:2000, *Rolling bearings — Tolerances — Part 1: Terms and definitions*

<https://standards.iteh.ai/catalog/standards/sist/98ab3bcb-3024-4140-9b88-00a832094Bc/iso-355-2007>

ISO 15241:2001, *Rolling bearings — Symbols for quantities*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 1132-1 and ISO 5593 apply.

4 Symbols

For the purposes of this document, the symbols given in ISO 15241 and the following apply.

The symbols shown in Figures 1 to 4 and the values given in Tables 4 to 16 denote nominal dimensions unless specified otherwise.

B inner ring width, single-row bearing

B_1 bearing width, double-row bearing

C outer ring width, single-row bearing

C_1 width of double outer ring, or width over two single outer rings and spacer

C_2 width of outer ring flange

D	outside diameter of outer ring
D_1	outside diameter of outer ring flange
d	bore diameter of inner ring
E	inside diameter of outer ring back face
h_1	height of outer ring flange
r	chamfer dimension of inner ring back face
$r_{s\ min}$	smallest single chamfer dimension of inner ring back face
r_1	chamfer dimension of outer ring back face
$r_{1s\ min}$	smallest single chamfer dimension of outer ring back face
r_2	chamfer dimension of inner ring and outer ring front face
T	bearing width, single-row bearing
α	contact angle

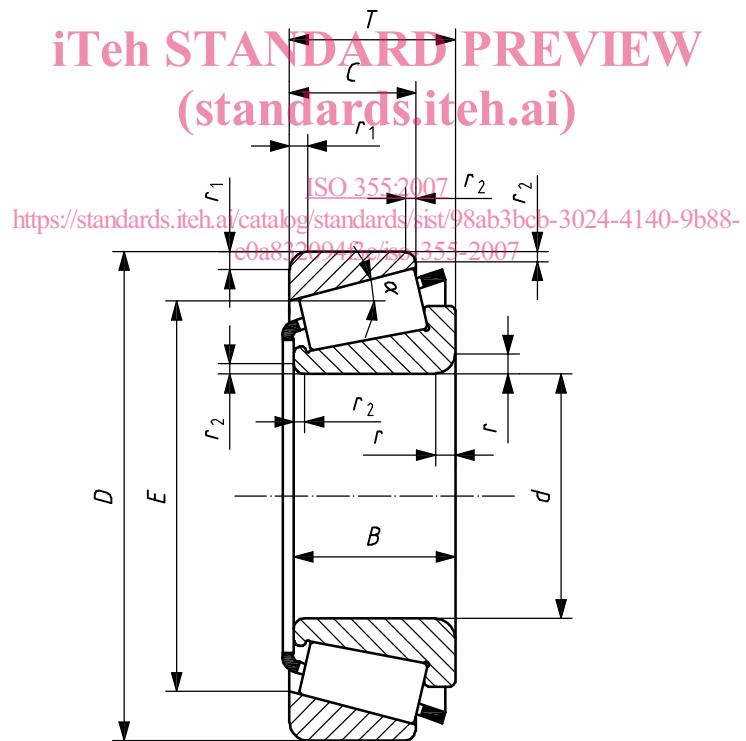

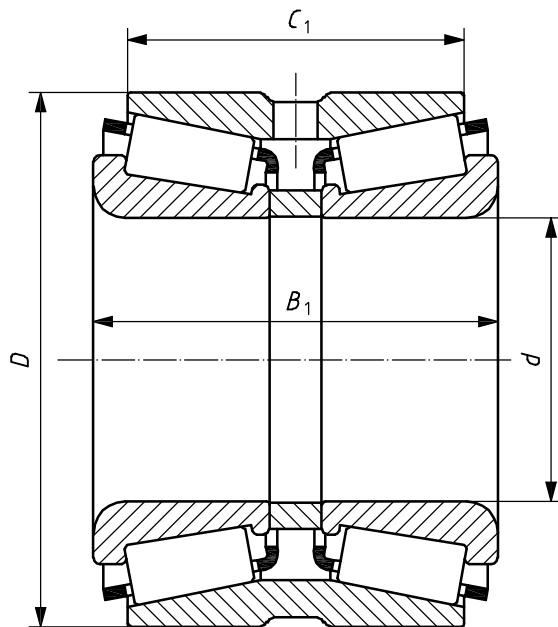

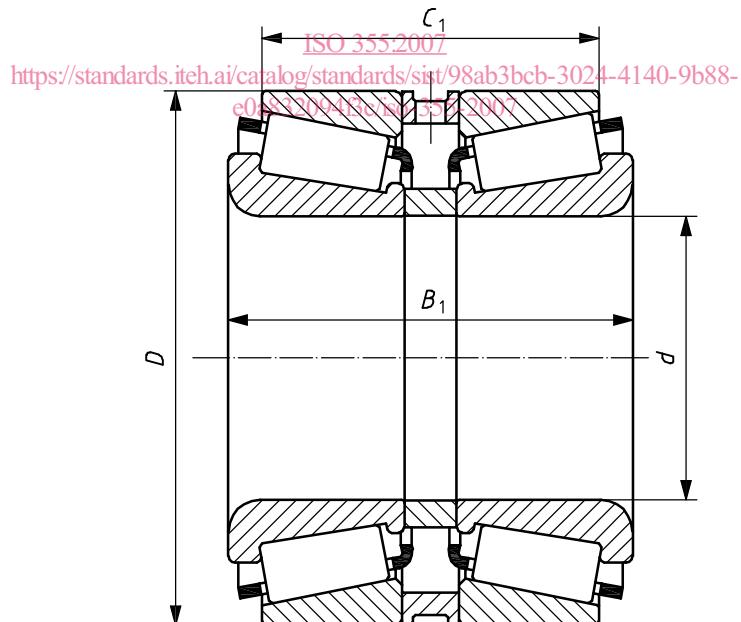

Figure 1 — Single-row tapered roller bearing

NOTE The double-row bearing outer ring may, or may not, have a lubrication groove and holes.

iTeh STANDARD PREVIEW

**Figure 2 — Double-row tapered roller bearing with double outer ring
(standards.iteh.ai)**

NOTE The double-row bearing outer spacer may, or may not, have a lubrication groove and holes.

Figure 3 — Double-row tapered roller bearing with two single outer rings and spacer

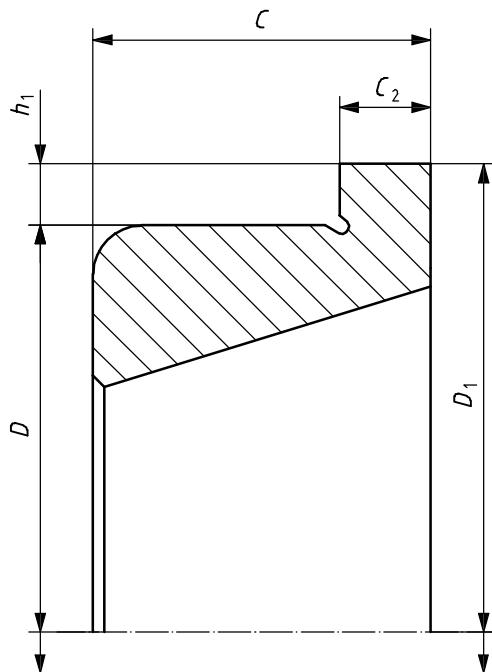

Figure 4 — Single-row tapered roller bearing with flanged outer ring

iTeh STANDARD PREVIEW (standards.iteh.ai)

5 Series designations

Each bearing whose dimensions are given in this International Standard is referred to a dimension series. The dimension series is designated by a combination of three symbols, for example 2AC.

<https://standards.iteh.ai/catalog/standards/sist/98ab3bcb-3024-4140-9b88-008320943c/iso-355-2007>

The first symbol is a numeric character, which represents a range of contact angles: contact angle series.

The second symbol is an alphabetic character, which represents a range of numeric values for the outside diameter to bore relationship: diameter series.

The third symbol is an alphabetic character, which represents a range of numeric values for the width to height relationship of a single-row bearing: width series.

The designations for the standardized bearings conform generally with the angle ranges and the numeric values for the relationships given in Tables 1 to 3. In some cases, an exception has been made to avoid the condition that the same designation be used for two different bearings with the same bore diameter.

The series designations shown in this clause shall not be applied to bearings other than those specified in Clause 6.

Table 1 — Designation of contact angle series

Designation of contact angle series	α	
	>	\leq
1	Reserved for future use	
2	10°	13° 52'
3	13° 52'	15° 59'
4	15° 59'	18° 55'
5	18° 55'	23°
6	23°	27°
7	27°	30°

Table 2 — Designation of diameter series

Designation of diameter series	$\frac{D}{d^{0,77}}$	
	>	\leq
A	Reserved for future use	
B	3,4	3,8
C	3,8	4,4
D	4,4	4,7
E	4,7	5
F	5	5,6
G	5,6	7

Table 3 — Designation of width series

Designation of width series	$\frac{T}{(D-d)^{0,95}}$	
	>	\leq
A	Reserved for future use	
B	0,5	0,68
C	0,68	0,8
D	ISO 355:2008	0,88
E	0,88	1
