7.7.1	Modulation.....	60
7.7.2	Slot type (Physical packets).....	60
7.8	Requirements regarding the speech transmission.....	60
7.8.1	General.....	60
7.8.2	Speech codecs	61
7.8.3	Audio performance requirements	61
7.9	Management procedures.....	61
7.10	Application procedures.....	61
Annex A (informative): Audio codecs.....		62
A.1	Speech and audio coding	62
A.1.1	Overview	62
A.1.2	Narrow band speech coding	63
A.1.3	Wideband Speech coding	63
A.1.4	Super-wideband speech and audio coding.....	64
Annex B (normative): Audio patterns to indicate IP packet losses on the DECT link.....		66
B.1	Audio patterns to indicate IP packet losses	66
B.1.1	Insertion of audio patterns	66
B.1.2	Reception of audio patterns	66
B.1.3	Contents of the audio patterns	66
B.1.4	Packet loss patterns for Recommendation ITU-T G.722.....	67
B.1.5	Packet loss patterns for Recommendation ITU-T G.711.....	67
B.1.6	Packet loss patterns for Recommendation ITU-T G.726.....	67
B.1.7	Packet loss patterns for Recommendation ITU-T G.729.1.....	68
B.1.8	Packet loss patterns for MPEG-4 ER AAC-LD.....	68
Annex C (normative): Configuration signalling for specific codecs		69
C.1	MPEG-4 ER AAC-LD configuration signalling	69
C.1.1	<<IWU to IWU>> element to signal the supported capabilities (MPEG4CapabilityElement).....	69
C.1.2	<<IWU to IWU>> element to signal the used Configuration (MPEG4ConfigurationElement)	70
Annex D (informative): Recommended implementation of procedures.....		72
D.1	Examples of implementation of specific procedures.....	72
D.1.1	General	72
D.1.2	Outgoing wideband call.....	73
D.1.2.1	Outgoing wideband call, no codec list, Recommendation ITU-T G.722 chosen.....	73
D.1.2.2	Outgoing Call Wideband, codec list, negotiation results in Wideband.....	74
D.1.2.3	Outgoing call with progress indicator with negotiation results in CC-INFO.....	76
D.1.2.4	Outgoing call with progress indicator; with negotiation results in CC-INFO codec change in 200 OK	77
D.1.2.5	Outgoing Call Wideband, negotiation results in Narrowband	78
D.1.2.6	Outgoing Call Wideband, negotiation results in longslot	78
D.1.3	Incoming Call Wideband.....	79
D.1.3.1	Incoming Call Wideband, negotiation results in Wideband	79
D.1.3.2	Incoming Call Wideband, negotiation results in Narrowband	79
D.1.3.3	Incoming Call Wideband, No SDP Offer in Invite, negotiation results in Narrowband.....	80
D.1.4	Service Change.....	81
D.1.4.1	Service Change from Wideband to Narrowband; re-negotiation initiated from IP-Network	81
D.1.4.2	Service Change from Wideband to Narrowband; re-negotiation initiated from FP.....	82
D.1.4.3	Service Change from Wideband to Narrowband; PP initiated; IP Network accepts Narrowband Codec	83
D.1.4.4	Service Change from Wideband Recommendation ITU-T G.722 to Narrowband; PP initiated; IP Network does not accept Narrowband Codec	83
D.1.5	Internal Call.....	84
D.1.5.1	Intercom Call, PP2 confirms Wideband	84

D.1.5.2	Intercom Call, PP2 confirms narrowband.....	85
D.1.5.3	Intercom Call with Interworking: WB Handset -> NB Handset.....	85
D.1.5.4	Internal Call transfer, WB -> NB.....	86
D.1.5.5	Internal Call transfer, NB -> WB.....	87
D.1.5.6	Internal Call transfer, NB -> WB, IP negotiation results in NB	88
D.1.6	Special cases.....	88
D.1.6.1	Service Change from Wideband to Narrowband with Call Waiting.....	88
D.1.6.2	Service Change from Wideband to Narrowband with Call Hold.....	89
D.1.6.3	Service Change from Wideband to Narrowband; Network layer Acknowledgment	90
D.1.6.4	Service Change from Narrowband to Wideband fails; Network layer Acknowledgment	91
D.1.6.5	Outgoing Call, slot type modification fails.....	92
D.1.7	Slot type and/or connection type modification.....	92
D.1.7.1	General.....	92
D.1.7.2	FT initiated connection modification.....	93
D.1.7.2.1	FT initiated connection modification (full slot I _N _minimum_delay -> long slot I _N _minimum delay).....	93
D.1.7.2.2	FT initiated connection modification (full slot I _N _minimum_delay -> long slot I _N _minimum_delay).....	95
D.1.7.2.3	FT initiated connection modification (long slot I _N _minimum_delay -> full slot I _N _minimum delay).....	97
D.1.7.2.4	FT initiated connection modification (long slot I _N _normal_delay -> full slot I _N _minimum delay).....	98
D.1.7.3	PT initiated connection modification.....	99
D.1.7.3.1	PT initiated connection modification (full slot I _N _minimum_delay -> long slot I _N _minimum delay).....	99
D.1.7.3.2	PT initiated connection modification (full slot I _N _minimum_delay -> long slot I _N _normal delay).....	101
D.1.7.3.3	PT initiated connection modification (long slot I _N _minimum_delay -> full slot I _N _minimum delay).....	103
D.1.7.3.4	PT initiated connection modification (long slot I _N _normal_delay -> full slot I _N _minimum delay).....	104
D.2	Examples of implementation of procedures for MPEG-4 ER AAC-LD voice service.....	105
D.2.1	MPEG-4 ER AAC-LD voice service codec configuration and negotiation process	105
D.2.1.1	Transmitting non default configuration using <<LOCATE-REQUEST>>, <<LOCATE-ACCEPT>> Message	105
D.2.1.2	Transmitting non default configuration using <<ACCESS-RIGHTS-REQUEST>>, <<ACCESS-RIGHTS-ACCEPT>> Message.....	106
D.2.1.3	Outgoing Call Super-wideband, codec MPEG-4 ER AAC-LD	107
D.2.1.3.1	Outgoing Call Super-wideband, INVITE command: AudioSpecificConfig()	107
D.2.1.3.2	Outgoing Call Super-wideband, OK command: AudioSpecificConfig()	108
D.2.1.4	Incoming Call Super-wideband, codec MPEG-4 ER AAC-LD.....	108
D.2.1.4.1	Incoming Call Super-wideband, INVITE command: AudioSpecificConfig()	108
D.2.1.4.2	Incoming Call Super-wideband, OK command: AudioSpecificConfig().....	109
Annex E (informative):	Services and features defined in other specifications	110
E.1	Services and features defined in EN 300 444 (GAP).....	110
E.1.1	GAP Network (NWK) features (clause 4.1 of EN 300 444)	110
E.1.2	GAP Speech coding and audio features (clause 4.2 of EN 300 444)	111
E.1.3	GAP Application features (clause 4.3 of EN 300 444).....	113
E.1.4	DLC service definitions (clause 5.1 of EN 300 444).....	113
E.1.5	GAP MAC service definitions (clause 5.2 of EN 300 444).....	114

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Digital Enhanced Cordless Telecommunications (DECT).

The present document is based on EN 300 175 parts 1 [1] to 8 [8] and EN 300 444 [12]. General attachment requirements and speech attachment requirements are based on EN 301 406 [11] (replacing TBR 006 [i.2]) and EN 300 176-2 [10] (previously covered by TBR 010 [i.3]). Further details of the DECT system may be found in TR 101 178 [i.1].

The present document has been developed in accordance to the rules of documenting a profile specification as described in ISO/IEC 9646-6 [i.13].

The information in the present document is believed to be correct at the time of publication. However, DECT standardization is a rapidly changing area, and it is possible that some of the information contained in the present document may become outdated or incomplete within relatively short time-scales.

The present document is part 1 of a multi-part deliverable covering the New Generation DECT as identified below:

- Part 1:** "Wideband speech";
- Part 2: "Support of transparent IP packet data";
- Part 3: "Extended wideband speech services";
- Part 4: "Light Data Services; Software Update Over The Air (SUOTA), content downloading and HTTP based applications";
- Part 5: "Additional feature set nr. 1 for extended wideband speech services".

1 Scope

The present document specifies a set of functionalities of the New Generation DECT.

The New Generation DECT provides the following basic new functionalities:

- Wideband voice service (the present document).
- Packet-mode data service supporting Internet Protocol with efficient spectrum usage and high data rates (TS 102 527-2 [i.4]).
- Extended Wideband speech services (TS 102 527-3 [i.5]).
- Light Data Services: Software Update Over The Air (SUOTA), Content Downloading and HTTP based applications (TS 102 527-4 [i.11]).
- Additional feature set nr.1 for Extended wideband speech services (TS 102 527-5 [i.12]).

All New Generation DECT devices will offer at least one of these services. If the device offers the wideband voice service, it will support also the DECT standard 32 kbit/s voice service according to EN 300 444 [12] (GAP).

All DECT devices claiming to be compliant with this Application Profile will offer at least the basic services defined as mandatory. In addition to that, optional features can be implemented to offer additional DECT services.

The aim of the present document is to guarantee a sufficient level of interoperability and to provide an easy route for the development of DECT wideband speech applications, with the features of the present document being a common fall-back option available in all devices compliant to this profile.

2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in EN 300 444 [12] and the following apply:

New Generation DECT (NG-DECT): further development of the DECT standard introducing wideband speech, improved data services, new slot types and other technical enhancements

super-wideband speech: voice service with enhanced quality compared to ADPCM G.726 and allowing the transmission of a maximum vocal frequency of at least 14 kHz

wideband speech: voice service with enhanced quality compared to ADPCM G.726 and allowing the transmission of a vocal frequency range of at least 150 Hz to 7 kHz, and fulfilling the audio performance requirements described in the Recommendation ITU-T P.311 [i.6]

3.2 Symbols

For the purposes of the present document, the following symbols apply:

C	Conditional to support (process mandatory)
I	out-of-scope (provision optional, process optional) not subject for testing
M	Mandatory to support (provision mandatory, process mandatory)
N/A	Not Applicable (in the given context the specification makes it impossible to use this capability)
O	Optional to support (provision optional, process mandatory)
ZAP	ability first to assign and then to re-program the account data held in the PP

Provision mandatory, process mandatory means that the indicated feature service or procedure will be implemented as described in the present document, and may be subject to testing.

Provision optional, process mandatory means that the indicated feature, service or procedure may be implemented, and if implemented, the feature, service or procedure will be implemented as described in the present document, and may be subject to testing.

NOTE: The used notation is based on the notation proposed in ISO/IEC 9646-7 [i.14].

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AAC	Advanced Audio Coding (MPEG)
AAC-LD	Advanced Audio Coding - Low Delay profile
AC	Authentication Code
ADPCM	Adaptive Differential Pulse Code Modulation
AES	Advanced Encryption Standard
AI	Air Interface
A-MAP	A-field mapping
ARI	Access Rights Identity
ARQ	Automatic Repeat reQuest
ASC	AudioSpecificConfig
BFI	Bad Frame Indicator
B-MAP	B-field mapping
B _S	Slow Broadcast channel
CC	Call Control
C _F	higher layer signalling Channel (fast)
CI	Common Interface
CLIP	Calling Line Identification Presentation
CN	Carrier Number
CNIP	Calling Name Identification Presentation
CODEC	COder-DECoder
CRC	Cyclic Redundancy Check
C _S	higher layer signalling Channel (slow)
DCK	Derived Cipher Key
DECT	Digital Enhanced Cordless Telecommunications
DLC	Data Link Control
DLEI	Data Link Endpoint Identifier
D-MAP	D-field mapping
DSAA	DECT Standard Authentication Algorithm
DSAA2	DECT Standard Authentication Algorithm #2
DSC	DECT Standard Cipher (algorithm)
DSC2	DECT Standard Cipher (algorithm) #2
DTMF	Dual Tone Multi-Frequency
ECN	Exchanged Connection Number
ER	Error Resilient (MPEG)
ESC	ESCAPE bit
EV-CELP	Embedded Variable Code Excited Linear Prediction
EV-CELP	Embedded Variable Code Excited Linear Prediction
FEC	Forward Error Correction
FMID	Fixed part MAC IDentity
FP	Fixed Part
FT	Fixed radio Termination
GAP	Generic Access Profile
GFSK	Gaussian Frequency Shift Key
HATS	Head And Torso Simulator
HTTP	HyperText Transfer Protocol
IA	Implementation Alternative
IE	Information Element
I _N	higher layer Information channel (uNprotected)
IO	Input Output
IP	Internet Protocol
IPUI	International Portable User Identity
ISDN	Integrated Services Digital Network
ITU-T	International Telecommunication Union - Telecommunication standardization sector
IWU	InterWorking Unit
LA	Location Area
LAPC	DLC layer C-plane protocol entity

LATM	Low overhead Audio Transport Multiplex
LBN	Logical Bearer Number
LCE	Link Control Entity
LD	Low Delay (MPEG)
LLME	Lower Layer Management Entity
LOAS	Low Overhead Audio Stream
LOG PCM	LOGarithmic Pulse Code Modulation
LU	LAP-U service
MAC	Medium Access Control
MAP	bit MAPpings
MDCT	Modified Discrete Cosine Transform
ME	Management Entity
MIPS	Million Instructions Per Seconds
MM	Mobility Management
MOS	Mean Opinion Score
MPEG	Motion Picture Experts Group
M _T	Mac control channel on A-tail field, or one message on such channel
MUX	time MULTipleXer
N	identities channel
NB	Narrow Band
NG	New Generation
NG-DECT	New Generation DECT
NR	Normal-Reverse
N _T	Identities information, one N channel message
NWK	NetWorK
P	Public (environment)
PA	Portable Application
PABX	Private Automatic Branch eXchange
PAP	Publilc Access Profile
PARI	Primary Access Rights Identity
PARK	Portable Access Rights Key
PCM	Pulse Code Modulation
PHL	PHysical Layer
PLC	Packet Loss Concealment
PLI	Park Length Indicator
PMID	Portable part MAC IDentity
PP	Portable Part
PRA	Primary Rate Access (ISDN)
PSCN	Primary receiver Scan Carrier Number
PSTN	Public Switched Telephone Network
PT	Portable radio Termination
PUN	Portable User Number
PUT	Portable User Type
Q	system information channel
Q _T	system information and multiframe marker (MAC logical channel)
R/B	Residential/Business (environment)
RAM	Random Access Memory
RFC	Request For Comments
RFP	Radio Fixed Part
RFPI	Radio Fixed Part Identity
ROM	Read Only Memory
RPN	Radio Fixed Part Number
RTP	Real-Time Transport Protocol
S/T	ISDN S/T Interface
SAP	Service Access Point
SAPI	Service Access Point Identifier
SARI	Secondary Access Rights Identity
SC	Speech Coding
SDP	Session Description Protocol
SDU	Service Data Unit
SN	Slot Number

SP	Start Position
SPR	Spare Bits
TARI	Tertiary Access Rights Identity
TCL	Telephone Coupling Loss
TCLw	weightedTelephone Coupling Loss
TDBWE	Time Domain Bandwidth Extension
TDMA	Time Division Multiple Access
TPUI	Temporary Portable User Identity
TRUP	TRansparent UnProtected service
U	ISDN U-Interface
UAK	User Authentication Key
UNF	UNprotected Framed service
UPI	User Personal Identification
WB	Wideband
WMOPS	Weighted Millions of Operations Per Second

4 Description of services

4.1 Enhanced wideband speech

In traditional telephony applications the supported bandwidth is 3,1 kHz (300 Hz to 3,4 kHz). For a better speech quality and a more natural sound, a bandwidth of at least 150 Hz to 7 kHz should be supported and may be extended even further.

New Generation DECT improves audio quality by implementing wideband enhanced quality audio codecs. All New Generation DECT wideband speech devices shall implement wideband (150 Hz to 7 kHz) audio (16 kHz frequency sampling). DECT devices supporting wideband audio shall support the speech coding format according to Recommendation ITU-T G.722 [17]. In addition to that, other wideband and super-wideband audio codecs, providing even better audio quality, may be implemented.

In order to transport the higher bitrate of the new enhanced codecs, the bitrate per channel at the air interface is doubled from 32 kbit/s in traditional DECT to 64 kbit/s.

All New Generation DECT wideband speech devices shall be backward compatible with traditional DECT 32 kbit/s voice (GAP) devices. New PPs shall operate with legacy base stations (FPs), and new FPs shall support existing PPs. In such cases, the voice quality is the traditional DECT quality (32 kbit/s ADPCM).

4.1.1 Audio performance requirements

New Generation DECT handsets shall fulfil the audio performance requirements described in EN 300 175-8 [8]. Different audio specifications are available for different applications, services and performance levels. The basic audio specification for Wideband speech handsets (known as PP type 2a, see EN 300 175-8 [8]) fulfils the requirements of Recommendation ITU-T P.311 [i.6]. There is the option of implementing more demanding specifications (PP types 2b and 2c of EN 300 175-8 [8]) providing superior performance.

4.2 Wideband speech scenarios

The following scenarios are envisaged.

4.2.1 Internal calls inside a New Generation DECT system

Figure 1 shows an internal call within a New Generation DECT system. In this scenario a wideband (150 Hz to 7 kHz) communication is possible between both terminals without any special issue.
