This European Standard was approved by CEN on 1994-08-17. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard has been drawn up by CEN/TC 132 "Aluminium and aluminium alloys", whose Secretariat is held by the Association Française de Normalisation (AFNOR).

Within its programme of work, Technical Committee CEN/TC 132 has been entrusted to prepare the following standard :

EN 573-4 Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 4 : Forms of products.

This standard is part of a set of four standards. The other standards deal with :

EN 573-1 Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 1 : Numerical designation system.

EN 573-2 Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 2 : Chemical symbol based designation system.

EN 573-3 Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 3 : Chemical composition.

STANDARD PREVIEW
This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 1995, and conflicting national standards shall be withdrawn at the latest by February 1995.

SIST EN 573-4:1998
In accordance with the CEN/CENELEC Internal Regulations, following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

1 Scope

This part of EN 573 gives the forms of products which are currently available for wrought aluminium and aluminium alloys, for each major field of application.

It applies to aluminium and aluminium alloys with the chemical compositions specified in EN 573-3.

NOTE : Some of the registered alloys may be the subject of patent or patent applications, and their listing herein is not to be construed in any way as the granting of a license under such patent right.

The four-figure numerical and the alternative chemical symbol based alloy designation systems are described respectively in EN 573-1 and EN 573-2.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

- | | |
|----------|---|
| EN 573-1 | Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 1 : Numerical designation system. |
| EN 573-2 | Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 2 : Chemical symbol based designation system. |
| EN 573-3 | Aluminium and aluminium alloys - Chemical composition and form of wrought products - Part 3 : Chemical composition. |
| EN 602 | Aluminium and aluminium alloys - Wrought products - Chemical composition of the semi-products used for the fabrication of materials and articles intended to be in contact with food. |

3 Classification

For the purpose of this standard, aluminium and aluminium alloys are classified into two classes, A and B, as follows :

- Class A : Aluminium and aluminium alloys produced in large volume for the relevant field of application, and for which the mechanical properties are specified in the corresponding European Standard.

NOTE : Rolling ingots and extrusion ingots are classified according to the relevant wrought products.

- Class B : Aluminium and aluminium alloys produced in limited volume for the relevant field of application and/or which are used for special applications not covered by an European Standard. The mechanical properties of these alloys are not specified in the corresponding European Standard when one exists.

Tolerances on dimensions and form, as specified in the relevant European Standard, apply to both Class A and Class B aluminium and aluminium alloys.

NOTE : Aluminium and aluminium alloys for Aerospace applications, which are fully standardized by AECMA but stand outside the field of general engineering, are in Class B. Their mechanical properties and tolerances on shape and dimensions are specified in the relevant European Aerospace Standard.

4 Forms of products

Tables 1 to 8 give, for each major field of application, the availability of each alloy as defined by their classification as an A or a B alloy.

The last column indicates whether the alloy is in conformance (Y or N) with EN 602 which specifies criteria which the chemical composition of wrought aluminium and aluminium alloys used for the production of materials and articles intended to be in contact with food shall comply with.
