## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.
The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least $75 \%$ of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO/IEC 14496-10:2005 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 29, Coding of audio, picture, multimedia and hypermedia information.

Amendment 1 to ISO/IEC 14496-10:2005, together with ISO/IEC 14496-10:2005/Cor.2:2006, is technically aligned with ITU-T Rec. H. 264 (2005)/Amd. 1 (2006) but is not published as identical text.

## In E.2, replace the semantics of matrix_coefficients and Table E-5 with the following:

matrix_coefficients describes the matrix coefficients used in deriving luma and chroma signals from the green, blue, and red primaries, as specified in Table E-5.
matrix_coefficients shall not be equal to 0 unless both of the following conditions are true

- $\quad$ BitDepth $_{C}$ is equal to BitDepth $_{Y}$
- chroma_format_idc is equal to 3 (4:4:4)

The specification of the use of matrix_coefficients equal to 0 under all other conditions is reserved for future use by ITU-T | ISO/IEC.
matrix_coefficients shall not be equal to 8 unless one of the following conditions are true

- $\quad$ BitDepth $_{C}$ is equal to BitDepth $_{Y}$
- BitDepth $_{\mathrm{C}}$ is equal to BitDepth $\mathrm{Y}_{\mathrm{Y}}+1$ and chroma_format_ide is equal to 3 (4:4:4)

The specification of the use of matrix_coefficients equal to 8 under all other conditions is reserved for future use by ITU-T | ISO/IEC.

When the matrix_coefficients syntax element is not present, the value of matrix_coefficients shall be inferred to be equal to 2 (unspecified).

## iTeh STANDARD PREVIEW

The interpretation of matrix_coefficients is defined as follows.

## (Stand lasions.d.itteh.ail)

- If transfer_characteristics is not equal to 11 or $12, \mathrm{E}^{\prime}{ }_{\mathrm{R}}, \mathrm{E}_{\mathrm{G}}$, and $\mathrm{E}^{\prime}{ }_{\mathrm{B}}$ are analog with values in the range of 0 to 1 .
- Otherwise (transfer_characteristics is equat to 11 (IEC $61966-2-4$ ) or 12 (4TU-R BT. 1361 extended colour gamut system), $\mathrm{E}_{\mathrm{R}}^{\prime}, \mathrm{E}_{\mathrm{G}}^{\prime}$ and $\mathrm{E}_{\mathrm{B}}^{\prime}$ are analog with a larger range not specified in this Specification.
- Nominal white is specified as having $E^{\prime}{ }_{R}$ equal to $1, E_{G}{ }_{G}$ equal to 1 , and $E^{\prime}{ }_{B}$ equal to 1 .
- Nominal black is specified as having $E{ }_{R}$ equal to $0, E^{\prime}{ }_{G}$ equal to 0 , and $E{ }_{B}$ equal to 0 .
- If video_full_range_flag is equal to 0 , the following equations apply.
- If matrix_coefficients is equal to $1,4,5,6$, or 7 , the following equations apply.

NOTE $-\mathrm{E}^{\prime} \mathrm{Y}$ is analog with the value 0 associated with nominal black and the value 1 associated with nominal white. $\mathrm{E}^{\prime}{ }_{\mathrm{PB}}$ and $E^{\prime}$ PR are analog with the value 0 associated with both nominal black and nominal white. When transfer_characteristics is not equal to 11 or $12, \mathrm{E}_{\mathrm{Y}}^{\prime}$ is analog with values in the range of 0 to 1 .
