[ISO/IEC 26702:2007](#)

**Abstract:** The interdisciplinary tasks, which are required throughout a system's life cycle to transform customer needs, requirements, and constraints into a system solution, are defined. In addition, the requirements for the systems engineering process and its application throughout the product life cycle are specified. The focus of this standard is on engineering activities necessary to guide product development while ensuring that the product is properly designed to make it affordable to produce, own, operate, maintain, and eventually to dispose of, without undue risk to health or the environment.

**Keywords:** acquire, analysis, architecture, building block, design, development, component, hardware, interface, life cycle processes, software, supplier, synthesis, system, system life cycle, systems engineering, technical management, validation, verification

## International Standard ISO/IEC 26702:2007(E)

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 26702 was prepared by IEEE (as IEEE Std 1220-2005) and was adopted, under a special “fast-track procedure”, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 7, *Software and systems engineering*, in parallel with its approval by national bodies of ISO and IEC. The IEEE Computer Society will cooperate in the maintenance of this International Standard as a Category A liaison to SC 7.

[ISO/IEC 26702:2007](https://standards.iteh.ai/catalog/standards/sist/dc6af937-f2c1-4661-8ed4-6e4351f84d5b/iso-iec-26702-2007)

<https://standards.iteh.ai/catalog/standards/sist/dc6af937-f2c1-4661-8ed4-6e4351f84d5b/iso-iec-26702-2007>

**IEEE Standards** documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied “**AS IS.**”

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position, explanation, or interpretation of the IEEE.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854  
USA

NOTE—Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

# Introduction

This introduction is not part of IEEE Std 1220-2005, IEEE Standard for Application and Management of the Systems Engineering Process.

## History

IEEE Std 1220 was initially published in January 1995 as a trial-use standard. After the two-year trial-use period, the document was revised and balloted in 1998 for full publication in 1999.

The International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) formed a joint body to collaborate in fields of mutual interest for worldwide standardization efforts. ISO/IEC established a joint technical committee for international standards development, ISO/IEC JTC 1, Information Technology. In parallel with IEEE Std 1220 developments, ISO/IEC JTC 1, Subcommittee 7 (SC7), Software and Systems Engineering, began generation of ISO/IEC 15288:2002 [B3].<sup>a</sup> ISO/IEC 15288:2002 provides a framework based on a broad set of processes that an organization or project may employ to perform or manage the stages of a system's life cycle. ISO/IEC 15288:2002 supports the full life cycle of systems—from conception through retirement—as well as the acquisition and supply of systems.

It is the intent of ISO/IEC 15288:2002 to establish standard life cycle process descriptions suitable for most man-made systems. As such, the processes and terminology of the standard are defined at an appropriately high level of abstraction. ISO/IEC 15288:2002 does not prescribe, nor provide, detailed system engineering process definitions or methods and procedures to address detail process requirements derived from the application of this standard. ISO/IEC TR 19760:2003 [B4], the companion guide for ISO/IEC 15288:2002, lists several standards, including IEEE Std 1220-1998, that cover engineering disciplines at a lower-tier level and are suitable for implementation with ISO/IEC 15288:2002.

This revision of IEEE Std 1220-1998 is a result of an ongoing harmonization of the standards of the IEEE Computer Society's Software and Systems Engineering Standards Committee (S2ESC) and the corresponding international standards committee, ISO/IEC JTC1/SC7. This initial alignment of IEEE Std 1220-1998 with ISO/IEC 15288:2002 was developed in cooperation with ISO/IEC JTC1/SC7 and included participation of the International Council on Systems Engineering (INCOSE). The next step towards harmonization of these two standards would be the submission of IEEE Std 1220-2005 for a "fast-track" ballot with ISO/IEC JTC1/SC7 followed by a coordinated revision.

The IEEE Computer Society has embraced the top-level framework provided by ISO/IEC 15288:2002 and has adopted ISO/IEC 15288 as IEEE Std 15288™-2004. The IEEE Computer Society offered to align IEEE Std 1220-1998 with ISO/IEC 15288:2002 to facilitate the joint use of the two standards to manage system engineering efforts. The purpose of this revision of IEEE Std 1220-1998 is to identify key similarities and differences in the two standards and demonstrate how they can be used together while minimizing the impact of ISO/IEC 15288:2002 on current IEEE Std 1220-1998 users who may not employ ISO/IEC 15288:2002.

The key differences between this version of the standard, IEEE Std 1220-2005, and the 1998 version are as follows:

- a) Inclusion of explanations regarding key differences between IEEE Std 1220-1998 and ISO/IEC 15288:2002 in areas such as terminology and structure
- b) Minimal adjustments to some IEEE Std 1220-1998 terms and definitions for alignment with ISO/IEC publication requirements
- c) Clarification of the distinction between requirements and recommendations of the standard

<sup>a</sup>The numbers in brackets correspond to those of the bibliography in Annex D.

- d) Update of the conformance clause for alignment with IEEE standards style and rules

Most of the IEEE Std 1220-1998 content remains the same in this version. Explanations to facilitate use of IEEE Std 1220 with ISO/IEC 15288:2002 are contained in a new Annex C.

## Purpose

This standard defines the requirements for an enterprise's total technical effort related to development of products (including computers and software) and processes that will provide life cycle support (sustain and evolve) for the products. It prescribes an integrated technical approach to engineering a system and requires the application and management of the systems engineering process throughout a product life cycle. The systems engineering process is applied recursively to the development or incremental improvement of a product to satisfy market requirements and to simultaneously provide related life cycle processes for product development, manufacturing, test, distribution, operation, support, training, and disposal.

The concept of systems engineering embodied in this standard provides an approach for product development in a system context. It is not meant to describe what an organizational entity called systems engineering does or a job position for which a systems engineer is responsible. Rather, it encompasses what all organizational entities and all enterprise and project personnel must accomplish to produce a quality, competitive product that will be marketable, will provide an acceptable return on investment to the enterprise, will achieve stakeholder satisfaction, and will meet public expectations.

The fundamental systems engineering objective is to provide high-quality products and services, with the correct people and performance features, at an affordable price, and on time. This involves developing, producing, testing, and supporting an integrated set of products (hardware, software, people, data, facilities, and material) and processes (services and techniques) that is acceptable to stakeholders, satisfies enterprise and external constraints, and considers and defines the processes for developing, producing, testing, handling, operating, and supporting the products and life cycle processes. This objective is achieved by simultaneous treatment of product and process content to focus project resources and design decisions for the establishment of an effective system design. This involves an integrated handling of all elements of a system, including those related to manufacturing, test, distribution, operations, support, training, and disposal.

## Notice to users

### Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

### Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

### Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying

patents or patent applications for which a license may be required to implement an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

## Participants

At the time this standard was completed, the IEEE 1220 Revision Working Group had the following membership:

**Teresa (Terry) Doran**, *Chair and Editor*  
**Ken Crowder**, *ISO/IEC JTC1/SC7 Liaison*  
**James Moore**, *IEEE CS Liaison to ISO/IEC JTC1/SC7*  
**Lorraine Pajerek**, *INCOSE Organizational Representative*

Werner Altmann	Mark Henley	Ken Ptack
Jim Armstrong	Ron Kohl	Karen Richter
Stuart Arnold	Jerome (Jerry) Lake	Garry Roedler
Randy Case	Jean-Philippe Lerat	Robert J. Schaaf
John Clark	Elizabeth Lotsu	Richard Schmidt
Paul Croll	John H. Mee	Robert Skalamera
Alain Faisandier	Frederick I. Moxley	Thomas Starai
Kevin Forsburg	John Napier	Mark Wilson
Rich Harwell	Steve Olson	Matthew Young
	Robert Peterson	

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Edward Bartlett	Clint Early, Jr.	Jacques Mathot
Richard Biehl	Christof Ebert	James Moore
Stephen Blanchette	William Eventoff	Dennis Nickle
Juris Borzovs	John Fendrich	Lou Pinto
Bruce Bullock	Yaacov Fenster	Gerald Radack
Joseph Butchko	Roger Fujii	Annette Reilly
Dino Butorac	Jean-Denis Gorin	David Rockwell
Keith Chow	Lewis Gray	Garry Roedler
Antonio M. Cicu	Michael Grimley	Helmut Sandmayr
Paul Croll	Mark Heinrich	James Sanders
Gregory Daich	John Horch	Robert J. Schaaf
Geoffrey Darnton	Peeya Iwagoshi	Carl Singer
Taz Daughtrey	Thomas M. Kurihara	Mitchell Smith
Maulik Dave	Joerg Kampmann	Luca Spotorno
Perry DeWeese	Piotr Karocki	Thomas Starai
Dr. Guru Dutt Dhingra	Ron Kenett	David Walden
Teresa (Terry) Doran	Carol Long	John Walz
Einar Dragstedt	Yuhai Ma	Oren Yuen
Scott Duncan	Joseph Marshall	Li Zhang

The following organizational representative voted on this standard:

**Lorraine Pajerek**, INCOSE

In addition, this standard was coordinated with the following organizations:

GEIA

NDIA

When the IEEE-SA Standards Board approved this standard on 20 March 2005, it had the following membership:

**Steve M. Mills**, *Chair*  
**Richard H. Hulett**, *Vice Chair*  
**Don Wright**, *Past Chair*  
**Judith Gorman**, *Secretary*

Mark D. Bowman  
Dennis B. Brophy  
Joseph Bruder  
Richard Cox  
Bob Davis  
Julian Forster\*  
Joanna N. Guenin  
Mark S. Halpin

Raymond Hapeman  
William B. Hopf  
Lowell G. Johnson  
Herman Koch  
Joseph L. Koepfinger\*  
David J. Law  
Daleep C. Mohla  
Paul Nikolich  
T. W. Olsen

Glenn Parsons  
Ronald C. Petersen  
Gary S. Robinson  
Frank Stone  
Malcolm V. Thaden  
Richard L. Townsend  
Joe D. Watson  
Howard L. Wolfman

\*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish K. Aggarwal, *NRC Representative*  
Richard DeBlasio, *DOE Representative*  
Alan Cookson, *NIST Representative*

<https://standards.iteh.ai/catalog/standards/sist/dc6af937-f2c1-4661-8ed4-6e4351f84d5b/iso-iec-26702-2007>

# IEEE Standard for Application and Management of the Systems Engineering Process

## 1. Overview

### 1.1 Scope

This standard defines the interdisciplinary tasks that are required throughout a system's life cycle to transform stakeholder needs, requirements, and constraints into a system solution. This standard is intended to guide the development of systems for commercial, government, military, and space applications. The information applies to a project within an enterprise that is responsible for developing a product design and establishing the life cycle infrastructure needed to provide for life cycle sustainment.

This standard specifies the requirements for the systems engineering process (SEP) and its application throughout the product life cycle. It does not attempt to define the implementation of each system life cycle process, but addresses the issues associated with defining and establishing supportive life cycle processes early and continuously throughout product development. In addition, the standard does not address the many cultural or quality variables that should be considered for successful product development. The standard focuses on the engineering activities necessary to guide product development while ensuring that the product is properly designed to make it affordable to produce, own, operate, maintain, and eventually to dispose of, without undue risk to health or the environment.

The requirements of this standard are applicable to new products as well as incremental enhancements to existing products. It applies to one-of-a-kind products, such as a satellite, as well as products that are mass-produced for the consumer marketplace. The requirements of this standard should be selectively applied for each specific system-development project. The role of systems engineering within the enterprise environment is described in Annex A.

The content of this standard describes an integrated approach to product development, which represents the total technical effort for the following:

- a) Understanding the environments and the related conditions in which the product may be utilized and for which the product should be designed to accommodate
- b) Defining product requirements in terms of functional and performance requirements, quality factors, usability, producibility, supportability, safety, and environmental impacts
- c) Defining the life cycle processes for manufacturing, test, distribution, support, training, and disposal, which are necessary to provide life cycle support for products
