Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This final draft ETSI Standard (ES) has been produced by ETSI Technical Committee Network Technologies (NTECH), and is now submitted for the ETSI standards Membership Approval Procedure.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "may not", "need", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

- [i.3] ETSI ES 282 003: "Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN); Resource and Admission Control Sub-System (RACS): Functional Architecture".
- [i.4] ETSI ES 282 007: "Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN); IP Multimedia Subsystem (IMS); Functional architecture".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

access identifier: identifier of an access network termination point

NOTE: Examples of access identifiers include wireline terminations identifiers in fixed access networks and mobile cell identifiers.

access network: collection of network entities and interfaces that provide the underlying IP transport connectivity between end user devices and other networks

access record: set of information stored in the CLF in relation to an access identifier

Application Function (AF): element of the network architecture offering - or providing access to - applications that require information about the characteristics of the IP-connectivity session used to access such applications

Attribute-Value Pair (AVP): Information Element in a Diameter message

NOTE: See RFC 6733 [10].

IP connectivity user: entity requesting IP connectivity from an access network

session record: set of information stored in the CLF in relation to an IP address

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ABNF	Augmented Backus-Naur Form
AF	Application Function
ASCII	American Standard Code for Information Interchange
ASF	Application Server Function
AVP	Attribute-Value Pair
CLF	Connectivity session Location and repository Function
CSCF	Call Session Control Function
DHCP	Dynamic Host Configuration Protocol
FQDN	Fully Qualified Domain Name
IANA	Internet Assigned Numbers Authority
IBCF	Interconnection Border Control Function
ICC	ITU Carrier Code
IETF	Internet Engineering Task Force
IMS	IP Multimedia Subsystem
IP	Internet Protocol
LAC	Location-Area-Code
LCI	Location Configuration Information
NASS	Network Attachment Sub-System
NGN	Next Generation Network
NOC	Network-Operator-Code
P-CSCF	Proxy Call Session Control Function
PDBF	Profile Data Base Function
PIDF LO	Presence Information Data Format Location Object
PNA	Presence Network Agent
PNR	Push-Notification-Request
RACF	Resource and Admission Control Function
RACS	Resource and Admission Control Subsystem
RFC	Request For Comments
SCTP	Stream Control Transport Protocol
SNA	Subscribe-Notifications-Answer
SNR	Subscribe-Notifications-Request
UAAF	User Authentication and Authorization Function
UDA	User-Data-Answer
UDR	User-Data-Request
UE	User Equipment
URI	Uniform Resource Identifier

4 Overview

The present document specifies a Diameter application for use between a Connectivity session Location and repository Function (CLF) and an Application Function (AF). The interface between the CLF and the AF is known as the e2 interface (figure 1).

A Connectivity session Location and repository Function (CLF) is a data base in an access network that maintains information associated to an IP address and/or an access identifier in the form of dynamic session records or static access records, respectively. How a CLF obtains this information is outside the scope of the present document.

In the context of the present document, an Application Function (AF) represents any network element offering - or providing access to - applications that require information about the characteristics of the IP-connectivity session used to access such applications. Annex A provides background information on the use of a CLF in NGN architectures (ETSI ES 282 001 [i.1]).

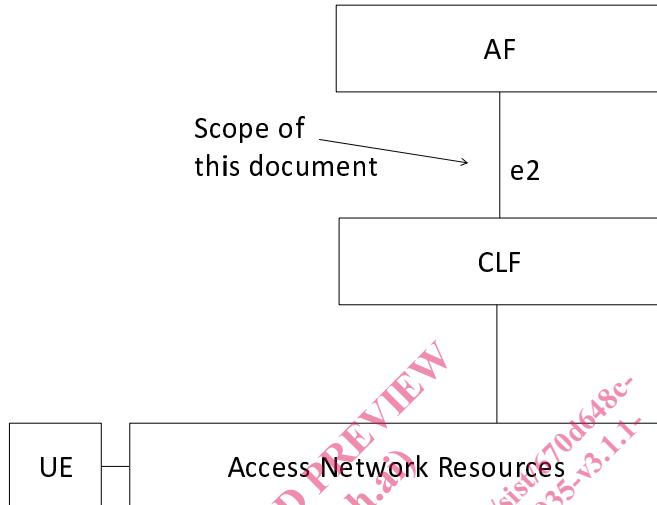

Figure 1: e2 interface

5 Procedure descriptions

5.1 General

The following clauses describe the procedures for supporting interactions between an AF and a CLF.

In the tables that describe this mapping, each Information Element is marked as (M) Mandatory, (C) Conditional or (O) Optional.

- A mandatory Information Element (marked as (M) in the table) shall always be present in the command. If this Information Element is absent, an application error occurs at the receiver and an answer message shall be sent back to the originator of the request with the Result-Code set to DIAMETER_MISSING_AVP. This message shall also include a Failed-AVP AVP containing the missing Information Element i.e. the corresponding Diameter AVP defined by the AVP Code and the other fields set as expected for this Information Element.
- A conditional Information Element (marked as (C) in tables 1 and 2) shall be present in the command if certain conditions are fulfilled:
 - If the receiver detects that those conditions are fulfilled and the Information Element is absent, an application error occurs and an answer message shall be sent back to the originator of the request with the Result-Code set to DIAMETER_MISSING_AVP. This message shall also include a Failed-AVP AVP containing the missing Information Element i.e. the corresponding Diameter AVP defined by the AVP Code and the other fields set as expected for this Information Element. If multiple Information Elements are missing, all corresponding AVP codes shall be included in the Failed-AVP AVP.

- If those conditions are not fulfilled, the Information Element shall be absent. If however this Information Element appears in the message, it shall not cause an application error and it may be ignored by the receiver if this is not explicitly defined as an error case. Otherwise, an application error occurs at the receiver and an answer message with the Result-Code set to DIAMETER_AVP_NOT_ALLOWED shall be sent back to the originator of the request. A Failed-AVP AVP containing a copy of the corresponding Diameter AVP shall be included in this message.
- An optional Information Element (marked as (O) in tables 1 and 2) may be present or absent in the command, at the discretion of the application at the sending entity. Absence or presence of this Information Element shall not cause an application error and may be ignored by the receiver.

5.2 Procedures on the CLF - AF interface

5.2.1 Information query

5.2.1.1 Overview

This procedure is used by an AF to retrieve from the CLF location information and other data related to an access session.

This procedure is mapped to the commands User-Data-Request/Answer in the Diameter application specified in ETSI TS 129 329 [7].

Tables 1 and 2 detail the involved information elements and their mapping to Diameter AVPs.

Table 1: Information query request

Information element name	Mapping to diameter AVP	Cat.	Description
Globally unique IP Address	Globally-Unique-Address	C	This information element contains: - The IP address of the UE for which profile information is being pushed. - The addressing domain in which the IP address is significant.
IP connectivity user ID	User-Name	C	The identity of the IP connectivity user that is attached to the network.
Access Identifier	Global-Access-Id	C	Identifies an access point to IP connectivity services.
AF Identity	AF-Application-Identifier	M	Identifies the AF originating the request.
Requested-Items	Requested-Information	O	The list of items requested by the AF.
Port-Number	Port-Number	O	The originating port number associated to the session for which the AF is attempting to retrieve information.

NOTE: Either the Globally-Unique-IP-Address, the IP connectivity user ID or the Access Identifier shall be included.

Table 2: Information query response

Information element name	Mapping to diameter AVP	Cat.	Description
Result	Result-Code / Experimental_Result	M	<p>Result of the request.</p> <p>Result-Code AVP shall be used for errors defined in the Diameter Base Protocol.</p> <p>Experimental-Result AVP shall be used for other errors. This is a grouped AVP which contains the 3GPP Vendor ID in the Vendor-Id AVP, and the error code in the Experimental-Result-Code AVP.</p>
IP connectivity user ID	User-Name	O	The identity of the IP connectivity user that is attached to the network.
Location Information	Location-Information	O	Location information (or a pointer to such information) in a form that is suitable for the requesting application.
Policy Control contact point	Policy-Control-Contact-Point	O	The FQDN or IP address of a policy control entity where resource request shall be sent.
Access Network Type	Access-Network-Type	O	The type of access network over which IP connectivity is provided to the user equipment.
Terminal Type	Terminal-Type	O	The type of user equipment to which the IP address was allocated.
Logical Access ID	Logical-Access-Id	O	The identity of the logical access where the user equipment is connected.
Physical Access ID	Physical-Access-Id	O	The identity of the physical access where the user equipment is connected.
Emergency-Call-Routeing-Info	Emergency-Call-Routeing-Info	O	A URI where to route emergency calls originated from the access and/or session considered.

5.2.1.2 Procedure at the AF side

The AF shall populate the Information Query as follows:

- 1) Insert either a Globally-Unique-Address, a User-Name AVP or a Global-Access-Id AVP. The Globally-Unique-Address AVP shall contain a Frame-IP-Address or Frame-IPv6-Prefix AVP value, and an Address-Realm AVP. The Address-Realm AVP shall be included and set either using configuration data (in which case all terminal equipment served by the AF belong to the same addressing domain) or from the physical or logical interface over which was received the resource request that triggered the pull procedure.
- 2) The AF-Application-Identifier AVP shall be present.
- 3) The Requested-Information AVP shall be present if specific information is requested and shall be absent if all available information is requested.

5.2.1.3 Procedure at the CLF side

Upon reception of the Information Query, the CLF shall, in the following order:

- 1) If the Globally-Unique-Address AVP is present, use this information as a key to retrieve a session record.
- 2) If the Globally-Unique-Address AVP is absent but the User-Name AVP is present, use the latter information as a key to retrieve a session record.
- 3) If both the Globally-Unique-Address AVP and the User-Name AVP are absent, and a Global-Access-Id AVP is present, use this information to retrieve an access record.
- 4) If more than one session record include the same IP connectivity user ID matching the value of the User-Name AVP and no Globally-Unique-Address AVP is included, return an Information Query response with Result-Code set to DIAMETER_UNABLE_TO_COMPLY.
- 5) If no session record is stored for the Globally-Unique-Address AVP or the User-Name AVP, return an Information Query with the Experimental-Result-Code AVP shall be set to DIAMETER_ERROR_USER_UNKNOWN.
