Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 18 to ISO/IEC 14496-4:2004 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

Part 4: Conformance testing

AMENDMENT 18: Conformance of MPEG-1/2 Audio in MPEG-4

In subclause 6.5.1 File name conventions, insert the following row into Table 29 after the row for DST:

Layer-3	I3_<coreSetup>_<fs>	I3_<coreSetup>_<fs>_<chan>
---------	---------------------	----------------------------

In subclause 6.6, add the following subclause:

6.6.21 Layer-3

6.6.21.1 Compressed data

6.6.21.1.1 Characteristics

Conformant Layer-3 compressed MPEG-4 data shall have the Layer-3 data stored as specified in ISO/IEC 14496-3, subpart 9.

6.6.21.1.2 Test procedure

Each compressed data shall meet the syntactic and semantic requirements specified in ISO/IEC 14496-3. The decoded data shall also meet the requirements defined in ISO/IEC 11172-3 and ISO/IEC 13818-3. If a syntactic element is not listed below, no restrictions apply to that element. The **reserved** element shall be encoded with the value zero.

6.6.21.1.2.1 AudioSpecificConfig

audioObjectType: Shall be encoded with the value 34.

6.6.21.1.2.2 Bitstream payload

syncword: shall be set to the total length of the mp3_channel_element (consisting of header, error_check, side_info and main data) in bytes

main_data_begin (9/8 bit): shall be set to the correct value for the corresponding MPEG-1/2 Layer 3 bitstream, or to zero

main_data(): shall be stored immediately following the side information

6.6.21.2 Decoders

6.6.21.2.1 Characteristics

The MPEG-4 Layer-3 object type (“mp3on4”) is the counterpart to the MPEG-1/2 Layer-3, though also offering multi-channel support and support for lower sampling rates. The compressed MPEG-4 data syntax is defined in ISO/IEC 14496-3. The Audio Object Type Layer-3 contains re-formatted ISO/IEC 11172-3 or ISO/IEC 13818-3 Layer 3 compressed data.

6.6.21.2.2 Test procedure

The test procedures specified in ISO/IEC 11172-4 and ISO/IEC 13818-4 shall be applied. If no test is specified, a check of conformance using appropriate measurements, e.g. the LSB criterion or objective perceptual measurement systems, is not mandatory but highly recommended.

6.6.21.2.3 Test sequences

To test MPEG-4 Layer-3 decoders, ISO/IEC JTC 1/SC 29/WG 11 supplies a number of test sequences. The test sequences are defined in Table AMD18.1.
