

INTERNATIONAL STANDARD

ISO/IEC
18000-6

Second edition
2010-12-01

Information technology — Radio frequency identification for item management —

Part 6:

Parameters for air interface

communications at 860 MHz to 960 MHz

iTeh STANDARD PREVIEW

Technologies de l'information — Identification par radiofréquence (RFID) pour la gestion d'objets —

Partie 6: Paramètres de communications d'une interface d'air entre 860 MHz et 960 MHz

| Foreword | xiii |
| Introduction..... | xiv |
| 1 Scope | 1 |
| 2 Conformance | 2 |
| 2.1 Claiming conformance..... | 2 |
| 2.2 Interrogator conformance and obligations..... | 2 |
| 2.3 Tag conformance and obligations..... | 2 |
| 3 Normative references..... | 3 |
| 4 Terms, definitions, symbols and abbreviated terms | 3 |
| 4.1 Terms and definitions | 3 |
| 4.2 Symbols..... | 6 |
| 4.3 Abbreviated terms | 7 |
| 4.4 Notation | 10 |
| 5 Overview..... | 10 |
| 5.1 General | 10 |
| 5.2 Parameter tables..... | 12 |
| 6 Common elements of the physical layer for Types A, B, and D..... | 21 |
| 6.1 General | 21 |
| 6.2 Interrogator power-up waveform | 21 |
| 6.3 Interrogator power-down..... | ISO/IEC 18000-6:2010 22 |
| 6.4 Frequency hopping carrier rise and fall times..... | 23 |
| 6.5 FM0 return link..... | 4fabb15fee45/iso-iec-18000-6-2010 24 |
| 6.5.1 FM0 return link general | 24 |
| 6.5.2 Modulation..... | 24 |
| 6.5.3 Data rate | 24 |
| 6.5.4 Data coding | 24 |
| 6.5.5 Message format | 25 |
| 6.5.6 Return preamble | 25 |
| 6.5.7 Cyclic redundancy check (CRC) | 26 |
| 7 Type A..... | 28 |
| 7.1 Physical layer and data coding..... | 28 |
| 7.1.1 PIE (Pulse interval encoding) forward link | 28 |
| 7.2 Data elements | 32 |
| 7.2.1 Unique identifier (Tag ID)..... | 32 |
| 7.2.2 Sub-UID..... | 33 |
| 7.2.3 Application family identifier | 33 |
| 7.2.4 Data storage format identifier (DSFID) | 34 |
| 7.3 Protocol elements | 34 |
| 7.3.1 Tag memory organisation..... | 34 |
| 7.3.2 Support of battery-assisted tags | 34 |
| 7.3.3 Block lock status | 35 |
| 7.3.4 Tag signature | 35 |
| 7.4 Protocol description..... | 36 |
| 7.4.1 Protocol concept | 36 |
| 7.4.2 Command format..... | 37 |
| 7.4.3 Command flags..... | 37 |
| 7.4.4 Round size | 38 |
| 7.4.5 Command code definition and structure | 39 |

| | | | |
|--------|--|---|----|
| 7.4.6 | Command classes | 39 | |
| 7.4.7 | Command codes and CRC..... | 40 | |
| 7.4.8 | Response format..... | 43 | |
| 7.4.9 | Tag states | 45 | |
| 7.4.10 | Collision arbitration | 47 | |
| 7.4.11 | General explanation of the collision arbitration mechanism | 47 | |
| 7.5 | Timing specifications | 50 | |
| 7.5.1 | Timing specifications general | 50 | |
| 7.5.2 | Tag state storage | 50 | |
| 7.5.3 | Forward link to return link handover | 50 | |
| 7.5.4 | Return link to forward link handover | 51 | |
| 7.5.5 | Acknowledgement time window | 51 | |
| 7.6 | Command format examples..... | 53 | |
| 7.7 | Mandatory commands..... | 53 | |
| 7.7.1 | Mandatory commands general..... | 53 | |
| 7.7.2 | Next_slot..... | 53 | |
| 7.7.3 | Standby_round..... | 54 | |
| 7.7.4 | Reset_to_ready | 56 | |
| 7.7.5 | Init_round_all | 56 | |
| 7.8 | Optional commands | 59 | |
| 7.8.1 | Optional commands general | 59 | |
| 7.8.2 | Init_round | 59 | |
| 7.8.3 | Close_slot..... | 60 | |
| 7.8.4 | New_round | 61 | |
| 7.8.5 | Select (by SUID) | 63 | |
| 7.8.6 | Read_blocks..... | 64 | |
| 7.8.7 | Get_system_information..... | 68 | |
| 7.8.8 | Begin_round | 71 | |
| 7.8.9 | Write_single_block | 73 | |
| 7.8.10 | Write_multiple_blocks..... | 75 | |
| 7.8.11 | Lock_blocks | ISO/IEC 18000-6:2010 77 | |
| 7.8.12 | Write_AFI | https://standards.iteh.ai/catalog/standards/sist/efeee848-daa9-449b-9aca-4fabb15fee45/iso-iec-18000-6-2010 | 79 |
| 7.8.13 | Lock_AFI..... | 81 | |
| 7.8.14 | Write_DSFID command | 83 | |
| 7.8.15 | Lock_DSFID | 85 | |
| 7.8.16 | Get_blocks_lock_status..... | 87 | |
| 7.8.17 | Init_Fast_Slots | 89 | |
| 7.9 | Custom commands..... | 92 | |
| 7.10 | Proprietary commands..... | 93 | |
| 8 | Type B | 93 | |
| 8.1 | Physical layer and data coding | 93 | |
| 8.1.1 | Forward link..... | 93 | |
| 8.1.2 | Return link | 96 | |
| 8.1.3 | Protocol concept..... | 96 | |
| 8.1.4 | Command format | 97 | |
| 8.1.5 | Response format..... | 99 | |
| 8.1.6 | WAIT | 99 | |
| 8.1.7 | Examples of a command packet | 99 | |
| 8.1.8 | Communication sequences at packet level | 100 | |
| 8.2 | Btree protocol and collision arbitration | 101 | |
| 8.2.1 | Definition of data elements, bit and byte ordering..... | 101 | |
| 8.2.2 | Tag memory organisation | 102 | |
| 8.2.3 | Block security status..... | 103 | |
| 8.2.4 | Overall protocol description, Btree protocol | 103 | |
| 8.2.5 | Collision arbitration | 108 | |
| 8.2.6 | Commands | 110 | |
| 8.2.7 | Command types | 110 | |
| 8.2.8 | Transmission errors | 137 | |

| | | |
|---------|--|-----|
| 9 | Type C | 138 |
| 9.1 | Protocol overview..... | 138 |
| 9.1.1 | Physical layer..... | 138 |
| 9.1.2 | Tag-identification layer | 138 |
| 9.2 | Command types and command structure | 138 |
| 9.2.1 | General | 138 |
| 9.2.2 | Mandatory..... | 138 |
| 9.2.3 | Optional | 138 |
| 9.2.4 | Custom | 139 |
| 9.2.5 | Proprietary | 139 |
| 9.3 | Description of operating procedure | 139 |
| 9.3.1 | Signalling..... | 139 |
| 9.3.2 | Tag selection, inventory, and access | 154 |
| 10 | Type D | 202 |
| 10.1 | Applicability | 202 |
| 10.2 | Protocol overview..... | 203 |
| 10.2.1 | General | 203 |
| 10.2.2 | Protocol parameter values | 204 |
| 10.2.3 | Tag arbitration | 204 |
| 10.2.4 | Operating procedure | 205 |
| 10.2.5 | TagMsg | 207 |
| 10.2.6 | CW control..... | 208 |
| 10.2.7 | Message encoding | 208 |
| 10.2.8 | Symbol modulation | 208 |
| 10.2.9 | Page modulation | 208 |
| 10.2.10 | Interrogator modulation detection..... | 211 |
| 10.3 | Type D Data..... | 211 |
| 10.3.1 | General | 211 |
| 10.3.2 | TID | 212 |
| 10.3.3 | Structured data encoding | 214 |
| 10.3.4 | Tag configuration..... | 218 |
| 10.4 | Encoding and decoding TID-S Tags..... | 218 |
| 10.4.1 | Encoding rules..... | 218 |
| 10.4.2 | Decoding rules..... | 219 |
| 11 | Battery Assisted Passive (BAP) Interrogator Talks First Type C systems (optional)..... | 220 |
| 11.1 | Applicability | 220 |
| 11.2 | General overview, definitions, and requirements of BAP | 220 |
| 11.3 | Battery Assisted Passive inventoried flag and state machine behaviour modifications | 222 |
| 11.3.1 | Modification to ready state and power-down support for BAP Tags | 222 |
| 11.3.2 | Signal loss tolerance via timer (mandatory)..... | 222 |
| 11.3.3 | Modified persistence of BAP PIE inventory flags (optional)..... | 225 |
| 11.4 | Battery Assisted Passive PIE (optional) | 227 |
| 11.4.1 | <i>Flex_Query</i> command (optional) | 227 |
| 11.4.2 | BAP PIE detailed operation including optional Battery Saver Mode | 228 |
| 11.5 | Manchester mode Battery Assisted operation protocol extensions | 235 |
| 11.5.1 | Introduction..... | 235 |
| 11.5.2 | Physical layer..... | 236 |
| 11.5.3 | Manchester Activation | 241 |
| 11.5.4 | Commands summary | 257 |
| 11.6 | Extended Protocol Control and Battery Tag Capabilities Reporting and Setting | 271 |
| 11.6.1 | General | 271 |
| 11.6.2 | Extended Protocol Control definition..... | 272 |
| 11.6.3 | Battery Assisted Passive Tag Capability Reporting, Setting, and duty cycle/mode control (optional) | 274 |
| 12 | Sensor support | 303 |
| 12.1 | Applicability | 303 |
| 12.2 | Overview..... | 303 |

| | | |
|------------------------------|---|------------|
| 12.3 | Real Time Clock (RTC) | 304 |
| 12.3.1 | General..... | 304 |
| 12.3.2 | Setting the RTC | 304 |
| 12.3.3 | BroadcastSync command (optional, for Type C) | 305 |
| 12.3.4 | Time synchronisation..... | 306 |
| 12.4 | HandleSensor command (optional, for Type C) | 307 |
| 12.5 | Simple Sensor | 308 |
| 12.5.1 | Type C and Simple Sensor | 308 |
| 12.5.2 | Type D and Simple Sensor | 310 |
| 12.6 | Sensor Directory System and Full Function Sensors..... | 310 |
| 12.6.1 | Sensor Access – General Approach..... | 310 |
| Annex A (informative) | Calculation of 5-bit and 16-bit cyclic redundancy checks for ISO/IEC 18000-6 Type A, Type B, Type C, and Type D..... | 317 |
| A.1 | Example CRC-5 encoder/decoder | 317 |
| A.2 | Example CRC-16 encoder/decoder | 317 |
| A.3 | Example CRC-16 calculations | 318 |
| Annex B (normative) | Memory mapping for ISO/IEC 18000-6 Type B..... | 322 |
| B.1 | Unique identifier (normative)..... | 322 |
| B.1.1 | Unique identifier general..... | 322 |
| B.1.2 | Unique identifier format | 322 |
| B.1.3 | Unique identifier according to ANSI 256..... | 322 |
| B.1.4 | Remaining system memory | 323 |
| Annex C (informative) | Tag memory map for ISO/IEC 18000-6 Type B..... | 327 |
| C.1 | Tag memory map | 327 |
| Annex D (normative) | Extensible bit vectors (EBV) for ISO/IEC 18000-6 Type C..... | 328 |
| Annex E (normative) | State-transition tables for ISO/IEC 18000-6 Type C..... | 329 |
| E.1 | Contents | 329 |
| E.2 | State transition tables for passive | 329 |
| E.2.1 | Present state: Ready | 329 |
| E.2.2 | Present state: Arbitrate | 330 |
| E.2.3 | Present state: Reply | 331 |
| E.2.4 | Present state: Acknowledged..... | 332 |
| E.2.5 | Present state: Open | 333 |
| E.2.6 | Present state: Secured | 334 |
| E.2.7 | Present state: Killed | 335 |
| E.3 | State transition tables for BAP PIE | 336 |
| E.3.1 | Present state: sleep | 336 |
| E.3.2 | Present state: low power listen | 336 |
| E.3.3 | Present state: listen or stateful listen..... | 336 |
| E.3.4 | Present state: stateful sleep or stateful low power listen | 336 |
| E.3.5 | Present state: battery ready | 337 |
| E.3.6 | Present state: Arbitrate | 337 |
| E.3.7 | Present state: Reply | 338 |

| | | |
|---|---|------------|
| E.3.8 | Present state: Acknowledged | 339 |
| E.3.9 | Present state: Open..... | 340 |
| E.3.10 | Present state: Secured..... | 342 |
| E.3.11 | Present state: Killed | 344 |
| E.4 | State transition tables for BAP Manchester | 344 |
| E.4.1 | Present state: Hibernate | 344 |
| E.4.2 | Present state: Activation code check..... | 345 |
| E.4.3 | Present state: Stateful Hibernate | 345 |

iTeh STANDARD PREVIEW (standards.iteh.ai)

[ISO/IEC 18000-6:2010](#)
<https://standards.iteh.ai/catalog/standards/sist/e0000000000000000000000000000000>

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 18000-6 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 31, *Automatic identification and data capture techniques*.

THE STANDARD IN REVIEW

(standards, iso-iec)

This second edition cancels and replaces the first edition (ISO/IEC 18000-6:2004), which has been technically revised. It also incorporates the Amendment ISO/IEC 18000-6:2004/Amd.1:2006.

ISO/IEC 18000 consists of the following parts, under the general title *Information technology — Radio frequency identification for item management*:
<http://standards.iso.org/iso/standard/4fabb15fee45/iso-iec-18000-6-2010>

- *Part 1: Reference architecture and definition of parameters to be standardized*
- *Part 2: Parameters for air interface communications below 135 kHz*
- *Part 3: Parameters for air interface communications at 13,56 MHz*
- *Part 4: Parameters for air interface communications at 2,45 GHz*
- *Part 6: Parameters for air interface communications at 860 MHz to 960 MHz*
- *Part 7: Parameters for active air interface communications at 433 MHz*

Introduction

This part of ISO/IEC 18000 describes a passive backscatter radio frequency identification (RFID) system that supports the following system capabilities:

- identification and communication with multiple tags in the field;
- selection of a subgroup of tags for identification or with which to communicate;
- reading from and writing to or rewriting data many times to individual tags;
- user-controlled permanently lockable memory;
- data integrity protection;
- Interrogator-to-tag communications link with error detection;
- tag-to-Interrogator communications link with error detection;
- support for both passive back-scatter tags with or without batteries.

The STANDARD PREVIEW

This part of ISO/IEC 18000 specifies the physical and logical requirements for a passive-backscatter, RFID system operating in the 860 MHz to 960 MHz frequency range. The system comprises Interrogators, also known as readers, and tags, also known as labels.

[ISO/IEC 18000-6:2010](#)

An Interrogator transmits information to a tag by modulating an RF signal in the 860 MHz to 960 MHz frequency range. The tag receives both information and operating energy from this RF signal. Passive tags are those which receive all of their operating energy from the Interrogator's RF waveform. If tags maintain a battery then they may operate using some passive principles; however, they do not necessarily get all their operating energy from the Interrogator's RF waveform.

An Interrogator receives information from a tag by transmitting a continuous-wave (CW) RF signal to the tag; the tag responds by modulating the reflection coefficient of its antenna, thereby backscattering an information signal to the Interrogator. The system is Interrogator-Talks-First (ITF) for Types A, B and C, meaning that a tag modulates its antenna reflection coefficient with an information signal only after being directed to do so by an Interrogator.

Interrogators and tags are not required to talk simultaneously; rather, communications are half-duplex, meaning that Interrogators talk and tags listen, or vice versa.

This part of ISO/IEC 18000 further contains an optional "tag only talks after listening" Type D, an enhanced Tag Talks Only (TTO) technique. Type D uses Pulse-Position Encoding (PPE) or Miller encoding in the return link and does not define a dedicated forward link. In fact, tags may implement one of the types defined in this part of ISO/IEC 18000 (A, B, or C) besides Type D in order to allow enhanced tag access techniques.

The International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) draw attention to the fact that it is claimed that compliance with this document may involve the use of patents concerning radio frequency identification technology.

ISO and IEC take no position concerning the evidence, validity and scope of these patent rights.

The holders of these patent rights have assured ISO and IEC that they are willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with ISO and IEC.

Information on the declared patents may be obtained from:
