Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Electromagnetic compatibility and Radio spectrum Matters (ERM).

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

In June 2016, the Directive 2014/53/EU [i.1] will replace the R&TTE Directive [i.2]. One of the main differences is that article 3.2 of the new Directive requires not only transmitters/transceivers, but also receivers to use spectrum efficiently and effectively and protect against harmful interference.

ETSI has published ETSI EG 203 336 [i.3] covering receiver parameters to be considered when updating harmonised standards. However, the parameter selection in that guide suggests that it was written with narrowband systems operating in licensed, channelized bands in mind.

The present document contains the results of the specialist task force (STF) 494 dealing with receiver parameters for ultra-wideband (UWB) applications.

1 Scope

The present document specifies receiver technical requirements, parameters and measurement procedures for UWB technologies.

It is a reference document for drafting new or revised UWB harmonised standards to fulfil the requirements of the Directive 2014/53/EU [i.1].

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference/>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] ETSI EN 303 883: "Short Range Devices (SRD) using Ultra Wide Band (UWB); Measurement Techniques".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] Directive 2014/53/EU of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC.
- [i.2] Directive 1999/5/EC of the European Parliament and of the Council of 9 March 1999 on radio equipment and telecommunications terminal equipment and the mutual recognition of their conformity.

- [i.83] ETSI EN 302 065 (All parts): "Short Range Devices (SRD) using Ultra Wide Band technology (UWB); Harmonised Standard covering the essential requirements of article 3.2 of the Directive 2014/53/EU".
- [i.84] ETSI EN 300 086: "Land Mobile Service; Radio equipment with an internal or external RF connector intended primarily for analogue speech; Harmonised Standard covering the essential requirements of article 3.2 of the Directive 2014/53/EU".
- [i.85] IEEE 802.11TM: "IEEE Standard for Information technology--Telecommunications and information exchange between systems Local and metropolitan area networks--Specific requirements Part 11: Wireless LAN Medium Access Control (MAC) and Physical Layer (PHY) Specifications".
- [i.86] IEC 61000-4-3: "Electromagnetic compatibility (EMC) - Part 4-3: Testing and measurement techniques - Radiated, radio-frequency, electromagnetic field immunity test".
- [i.87] ERC REC (14)02: "Radio-frequency channel arrangements for high, medium and low capacity digital fixed service systems operating in the band 6425 to 7125 MHz".

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

applicable interferers: interferers to be tested for interferer signal handling

interferer signal handling: capability of the receiver to operate as intended in coexistence with interferers

performance criterion: metric used to evaluate the performance of the device

receiver parameter: characteristic of the receiver that is tested

user manual: end user documentation to be included with the device

3.2 Symbols

For the purposes of the present document, the following symbols apply:

A_{lin}	attenuation (linear)
B_{chan}	bandwidth of the radio service
B_{CW}	bandwidth of CW signal
dB	decibel
Hz	Hertz
m	metre
P_{CW}	power of the CW signal
$\text{PSD}(f)$	power spectral density of signals for that radio service
P_{tx}	power of the radio service

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ALD	Assistive Listening Devices
AWG	Arbitrary Waveform Generator
AWGN	Additive White Gaussian Noise
BBDR	Broad Band Disaster Relief
BER	Bit Error Rate
BFWA	Broadband Fixed Wireless Access
BMA	Building Material Analysis
BPSK	Binary Phase Shift Keying
BS	Base Station
CDMA	Code Division Multiple Access
CEPT	Conférence des administrations Européennes des Postes et Telecommunications
CW	Continuous Wave
DAA	Detect And Avoid
DAB	Digital Audio Broadcast
DAC	Digital to Analog Converter
DCS	Digital Cellular System
DECT	Digital Enhanced Cordless Telecommunication
DUT	Device Under Test
ECC	Electronic Communications Committee
E-GSM	Extended GSM
EIRP	Effective Isotropic Radiated Power
EMC	ElectroMagnetic Compatibility
ER-GSM	Extended Railway GSM
ERM	Electromagnetic compatibility and Radio spectrum Matters
E-UTRA	Enhanced Universal Terrestrial Radio Access
FDD	Frequency Division Duplex
FIR	Finite Impulse Response
FM	Frequency Modulation
GPR	Ground Probing Radar
GSM	General System for Mobile communication
IEEE	Institute of Electrical and Electronics Engineers
IMT	International Mobile Telecommunications
ISM	Industrial, Scientific and Medical
ISO	International Organization for Standardization
ITS	Intelligent Transport Systems
ITU	International Telecommunications Union
LAN	Local Area Network
LBT	Listen Before Talk
LLC	Logical Link Control
LPR	Level Probing Radar
LTE	Long Term Evolution
MAC	Medium Access Control
MBANS	Medical Body Area Network System
MOB	Man Over-Board

ND	Noise and Distortion
NLOS	Non Line-Of-Sight
OSI	Open System Interconnect
PAN	Personal Area Network
PCS	Personal Communications Service
PCS	Physical Coding Sublayer
PER	Packet Error Rate
P-GSM	Primary GSM
PHR	PHY HeadeR
PHY	PHYsical layer
PMA	Physical Medium Attachment sublayer
PMD	Physical Medium Dependent sublayer
PMR	Private Mobile Radio
PMSE	Program Making and Special Events
PPDR	Public Protection and Disaster Relief
PSD	Power Spectral Density
R&TTE	Radio and Telecommunications Terminal Equipment
RCS	Radar Cross Section
RED	Radio Equipment Directive
RF	Radio Frequency
RFID	Radio Frequency Identification
R-GSM	Railway GSM
RRC	Root Raised Cosine
SECDED	Single Error Correction Double Error Detection
SND	Signal, Noise and Distortion
SNR	Signal to Noise Ratio
SRD	Short Range Device
SRR	Short Range Radar
STF	Special Task Force
T-DAB	Terrestrial DAB
TDD	Time Division Duplex
TLPR	Tank Level Probing Radar
TTT	Transport and Traffic Telematics
UE	User Equipment
UMTS	Universal Mobile Telecommunication System
UTRA	Universal Terrestrial Radio Access
UWB	Ultra-WideBand
WiMAX	Worldwide Interoperability for Microwave ACCess
WLAN	Wireless Local Area Network
WPR	Wall Probing Radar

This is a STANDARD PREVIEW version of the standard:

4 Purpose of receiver parameters

The intention of article 3.2 of Directive 2014/53/EU [i.1] in relation to a receiver is explained in recitals 10 and 11 of the Directive which state:

"...in the case of a receiver, it [receiving device] has a level of performance that allows it to operate as intended and protects it against the risk of harmful interference, in particular from shared or adjacent channels, and, in so doing, supports improvements in the efficient use of shared or adjacent channels."

ETSI EG 203 336 [i.3] translates these high level essential requirements into technical specifications by defining a number of receiver parameters in clause 5.3 of ETSI EG 203 336 [i.3].

In order to specify performance of the receiving device, ETSI EG 203 336 [i.3] uses terms like 'level of performance' and 'a given degradation'. Therefore, quantified performance criteria are required. Clause 5 of the present document discusses these performance criteria in the context of UWB applications. Clause 6 then considers the receiver parameters in ETSI EG 203 336 [i.3] and proposes more suitable receiver parameters for UWB applications.

As a result, the definition of receiver parameters should ensure the proper operation of receiving devices in an environment co-located with other radio equipment.
