iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 302 018 V2.1.1:2017](#)
<https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-49df-b321-0059cdd316d9/sist-en-302-018-v2-1-1-2017>

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Harmonised European Standard (EN) has been produced by ETSI Technical Committee Electromagnetic compatibility and Radio spectrum Matters (ERM).

The present document has been prepared under the Commission's standardisation request C(2015) 5376 final [i.4] to provide one voluntary means of conforming to the essential requirements of Directive 2014/53/EU on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC [i.1].

Once the present document is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of the present document given in table A.1 confers, within the limits of the scope of the present document, a presumption of conformity with the corresponding essential requirements of that Directive, and associated EFTA regulations.

THE STANDARD REVIEW (standards.iteh.ai)

Date of adoption of this EN	27 March 2017 <small>https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-40d6-8131-0059cd316d9/sist-en-302-018-v2-1-1-2017</small>
Date of latest announcement of this EN (doa):	30 June 2017
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 December 2017
Date of withdrawal of any conflicting National Standard (dow):	31 December 2018

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document describes the requirements for the design and operation of an FM sound broadcasting service transmitter to meet the essential requirements of article 3.2 of Directive 2014/53/EU [i.1].

1 Scope

The present document specifies technical characteristics and methods of measurements for transmitter equipment for broadcast sound services using the frequency modulated sound broadcasting service operating in the frequency range 68 MHz to 108 MHz.

The present document covers the essential requirements of article 3.2 of Directive 2014/53/EU [i.1] under the conditions identified in annex A.

2 References

2.1 Normative references

References are specific, identified by date of publication and/or edition number or version number. Only the cited version applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference/>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] Recommendation ITU-R BS.468-4 (1986). "Measurement of audio-frequency noise voltage level in sound broadcasting". <https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-49df-b321-0059cdd316d9/sist-en-302-018-v2-1-1-2017>
- [2] Recommendation ITU-R BS.450-3 (2001): "Transmission standards for FM sound broadcasting at VHF". <https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-49df-b321-0059cdd316d9/sist-en-302-018-v2-1-1-2017>

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] Directive 2014/53/EU of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC.
- [i.2] ETSI TR 100 028 (all parts): "Electromagnetic compatibility and Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics".
- [i.3] ETSI TR 100 028-2: "Electromagnetic compatibility and Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics; Part 2".
- [i.4] Commission Implementing Decision C(2015) 5376 final of 4.8.2015 on a standardisation request to the European Committee for Electrotechnical Standardisation and to the European Telecommunications Standards Institute as regards radio equipment in support of Directive 2014/53/EU of the European Parliament and of the Council.
- [i.5] Recommendation ITU-R BS.412 (1998): "Planning standards for terrestrial FM sound broadcasting at VHF".

- [i.6] Recommendation ITU-R BS.641 (1986): "Determination of radio-frequency protection ratios for frequency-modulated sound broadcasting".

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in Directive 2014/53/EU [i.1] and the following apply:

antenna port: port of an apparatus which is designed, in normal operation, to be connected to an antenna using coaxial cable

broadcasting service: radio communication service in which the transmissions are intended for direct reception by the general public

NOTE: This service may include sound transmissions, television transmissions or other types of transmission.

carrier power: average power supplied to the antenna port by a transmitter during one cycle taken under the condition of no modulation

channel L: left hand channel of a stereophonic signal

channel R: right hand channel of a stereophonic signal

class of emission: set of characteristics of an emission, designated by standard symbols, e.g. type of modulation of the main carrier, modulating signal, type of information to be transmitted, and also, if appropriate, any additional signal characteristics
*iTech STANDARD PREVIEW
(standards.itech.ai)*

composite: See "Multiplex (MPX) signal".

[SIST EN 302 018 V2.1.1:2017](#)

dBc: decibels relative to the unmodulated carrier power of the emission
<https://www.etsi.org/standards/technical-specifications/sist-en-302-018-v2-1-1-2017>
0059cd316d9/sist-en-302-018-v2-1-1-2017

NOTE: In the cases which do not have a carrier, for example in some digital modulation schemes where the carrier is not accessible for measurement, the reference level equivalent to dBc is decibels relative to the mean power P.

difference signal: signal (S) theoretically equal to half the difference between the left (L) and right (R) stereophonic signals. $S = (L - R) / 2$

exclusion band: band of radio frequencies where no measurements are made

frequency tolerance: maximum permissible departure of the characteristic frequency of an emission from the assigned frequency

NOTE: The frequency tolerance is expressed in parts per 10^6 or in Hz.

harmonic: component of order greater than 1 of the Fourier series of a periodic quantity

harmonic number: integral number given by the ratio of the frequency of a harmonic to the fundamental frequency (second harmonic = $2 \times$ fundamental frequency)

mean power: average power supplied to the antenna port by a transmitter during an interval of time sufficiently long compared with the lowest frequency encountered in the modulation envelope taken under normal operating conditions

MultiPleX (MPX) signal: contains all information, including the pilot tone and any supplementary signal which is used to frequency modulate the VHF FM transmitter

necessary bandwidth: for a given class of emission, the width of the frequency band which is sufficient to ensure the transmission of information at the rate and with the quality required under specified conditions

out-of-band emissions: emission on a frequency or frequencies immediately outside the necessary bandwidth which results from the modulation process, but excluding spurious emissions

pilot tone: 19 kHz tone used to recover the stereo subcarrier in the stereo-receiver

reference bandwidth: bandwidth in which the emission level is specified

signal L: corresponds to the information in the left channel of the stereophonic signal

signal R: corresponds to the information in the right channel of the stereophonic signal

spurious emissions: emission on a frequency or frequencies which are outside the necessary bandwidth and the level of which may be reduced without affecting the corresponding transmission of information

NOTE: Spurious emissions include harmonic emissions, parasitic emissions, intermodulation products and frequency conversion products but exclude out of band emissions.

stereo subcarrier: 38 kHz subcarrier used to carry the difference signal

sum signal: signal (M) theoretically equal to half of the sum of the left (L) and right (R) stereophonic signals.
 $M = (L + R) / 2$

unwanted emissions: consist of spurious emissions and out of band emissions

3.2 Symbols

For the purposes of the present document, the following symbols apply:

Ω	ohms (unit of resistance)
μ	micro, 10^{-6}

iTeh STANDARD PREVIEW

3.3 Abbreviations (standards.iteh.ai)

For the purposes of the present document, the following abbreviations apply:

4 Technical requirements specifications

4.1 Environmental profile

The technical requirements of the present document apply under the environmental profile for operation of the equipment, which shall be declared by the manufacturer. The equipment shall comply with all the technical requirements of the present document which are identified as applicable in annex A at all times when operating within the boundary limits of the declared operational environmental profile.

4.2 Conformance requirements

4.2.1 Rated output power

4.2.1.1 Definition

The rated output power is the carrier power that the EUT shall deliver at its antenna port under manufacturers specified conditions of operation.

4.2.1.2 Limit

The carrier output power shall be the rated output power under normal operating conditions as defined by the manufacturer.

iTeh STANDARD PREVIEW

4.2.1.3 Conformance ([standards.iteh.ai](https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-49df-b321-0059cdd316d9/sist-en-302-018-v2-1-1-2017))

Conformance tests as defined in clause 5.3.1 shall be carried out.

[SIST EN 302 018 V2.1.1:2017](#)

4.2.2 Frequency drift <https://standards.iteh.ai/catalog/standards/sist/874e1e2f-4db0-49df-b321-0059cdd316d9/sist-en-302-018-v2-1-1-2017>

4.2.2.1 Definition

The frequency drift of an emission is the uncontrolled continuous and irreversible variation of frequency against a predetermined timescale.

4.2.2.2 Limit

For a period of not less than ninety days, the frequency tolerance of the transmitter shall stay within ± 300 Hz.

4.2.2.3 Conformance

Conformance tests as defined in clause 5.3.2 shall be carried out.

4.2.3 Deviation sensitivity stability

4.2.3.1 Definition

Stability of the required audio or MPX input level to the transmitter to achieve desired deviation.

4.2.3.2 Limit

- a) The deviation sensitivity of the transmitters shall remain within $\pm 3\%$ of the declared value under the manufacturers declared operating conditions.
