## Foreword

This amendment to ETS 300 174 (1992) has been produced by the Network Aspects (NA) Technical Committee of the European Telecommunications Standards Institute (ETSI).

| Transposition dates  |                  |
|--|------------------|
| Date of adoption of this amendment:                                  | 22 August 1997   |
| Date of latest announcement of this amendment (doa):                 | 30 November 1997 |
| Date of latest publication or endorsement of this amendment (dop/e): | 31 May 1998      |
| Date of withdrawal of any conflicting National Standard (dow):       | 31 May 1998      |

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST ETS 300 174/A1 E1:2003](https://standards.iteh.ai/catalog/standards/sist/696d4c93-b900-4599-999d-0833e8d17bcd/sist-ets-300-174-a1-e1-2003)

<https://standards.iteh.ai/catalog/standards/sist/696d4c93-b900-4599-999d-0833e8d17bcd/sist-ets-300-174-a1-e1-2003>

**Amendments****Page 33, amendment to subclause 8.1.2**

Replace the SN<sub>i</sub> by:

SN<sub>i</sub> Stripe Number for the i<sup>th</sup> stripe

8 bits

range is from 0 to 71 {50 Hz system}:

0 to 35 {first field}  
36 to 71 {second field}  
the MSB is set to "0"

range is from 0 to 61 {60 Hz system}:

0 to 30 {first field}  
31 to 61 {second field}  
the two MSB's are set to "0"

**Page 33, amendment to subclause 8.1.2**

Replace CRC<sub>i</sub> by:

CRC<sub>i</sub> Cyclic Redundancy Code for the i<sup>th</sup> stripe

16 bits

(to be applied to all bits of the encoded stripe excluding SSW).

The generator polynomial is  $1 + x^2 + x^{15} + x^{16}$

The CRC calculation registers are initialized to zero before the start of each stripe.

**Page 34, amendment to subclause 8.1.3**

Replace FS by:

| FS  | Field sequence | Frame | Field | VA |
|---|----------------|-------|-------|----|
|   | 000            | 1     | 1     | 1  |
|   | 001            | 1     | 2     | 1  |
|   | 010            | 2     | 3     | 0  |
|   | 011            | 2     | 4     | 0  |
|   | -              | -     | -     | 1  |
|   | -              | -     | -     | 1  |
|   | -              | -     | -     | 0  |
|   | 111            | 4     | 8     | 0  |
| NOTE: This table applies for PAL and SECAM. The VA information is applicable to PAL only. |                |       |       |    |

**Page 34, amendment to subclause 8.1.3**

Replace BA by:

BA Burst Amplitude (for PAL and NTSC only).

The peak to peak amplitude of the subcarrier burst is quantized as a CCIR Recommendation 601 luminance signal, with the MSB omitted.

**Page 34, amendment to subclause 8.1.3**

Replace SCP by:

SCP Subcarrier Phase (for PAL and NTSC only).

Instantaneous phase of the reference subcarrier at the field-synchronization datum respectively field start as defined in CCIR Report 624-3 [8], MSB first.

|        |     |   |                     |
|--------|-----|---|---------------------|
| Scale: | 0   | = | $([360/256] * 0)$   |
|        | 1   | = | $([360/256] * 1)$   |
|        | ... | = | ...                 |
|        | 255 | = | $([360/256] * 255)$ |

**Page 40, amendment to subclause 9.2.4**

Replace the first paragraph by:

The packets defined above (19 octets maximum) are transmitted within High-Level Data Link Control (HDLC) frames (see ISO Standard 3309-2 [11]) on the 8 kHz supervision channel provided by bit S of the container. In all packets LSB (bit 0) is sent first.

**Page 43, amendment to subclause 9.3.4**

[SIST ETS 300 174/A1 E1:2003](http://standards.iteh.ai/catalog/standards/sist/ets-300-174-a1-e1-2003)

Replace the first paragraph by: <http://standards.iteh.ai/catalog/standards/sist/696d4c93-b900-4599-999d-0833e8d17bcd/sist-ets-300-174-a1-e1-2003>

Teletext messages are formed by the complete data unit specified for the system. For system B teletext in 525/60 systems, a dummy octet, set to zero, is added at the end of the data unit. The message length is therefore as shown in table 12. The first bit after the run-in sequence is MSB of the first octet of the data field.

**Page 49, amendment to subclause 10.2.3, table 14**

Replace in table 14; FRAME NUMBER 3, column  $m_3$  by:

"1" if A' channel is 1544 Kbit/s (see note 3)

**Page 53, amendment to subclause 11.1**

Replace the sentence below Figure 18 by:

The initial value at the beginning of the first frame is:

LSB -> 001111101

Page 6

ETS 300 174: November 1992/A1: August 1997

## Page 54, amendment to subclause 11.2

Replace K by:

K (6 bit) indicates the frames where S is a stuffing octet according to the  $14 + J \cdot 15$  law with J having values between 0 and 45:

K = 111111 for frames 14, 29, 44, etc.;  
K = 000000 for all other frames.

## Page 59, amendment to subclause 12.2.2

Replace after the definition of function g  $X_{n+1}$  by:

$$\text{then } X_{n+1} = \begin{cases} Q1, Q2, Q3 \text{ (XOR) } QI, Q4, (16 \overline{Q2} + \overline{Q0}) \bmod 31^* \\ R1, R2 \text{ (XOR) } RI, R3, R4, R5, R6, (R1 + 16 \overline{R0}) \bmod 31^* \\ S1, S2, S3 \text{ (XOR) } SI, S4, (2 S2 + 2 \overline{S0}) \bmod 127^* \\ T1, T2 \text{ (XOR) } TI, T3, T4, T5, T6, (2 T1 + 2 \overline{T0}) \bmod 127^* \end{cases}$$
