Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This draft European Standard (EN) has been produced by ETSI Technical Committee Environmental Engineering (EE), and is now submitted for the combined Public Enquiry and Vote phase of the ETSI standards EN Approval Procedure.

Proposed national transposition dates	
Date of latest announcement of this EN (doa):	EN 303 472 V1.1.1:2018 3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	6 months after doa

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

Energy efficiency has been seen to be a critical issue for telecommunication systems in relation to environmental impact and operational cost.

Within a radio access network (RAN), energy consumption is dominated by the base stations (BSs), the support infrastructure at the BS sites and repeaters (where used).

The key Performance Indicators (KPIs) and the associated measurement processes defined in the present document are used to reflect the operational energy efficiency of a radio access network and supporting infrastructures as specified in the scope.

The present document is related to the following documents:

- ETSI ES 203 228 [1] - addressing energy consumption and efficiency measurement of operational radio access networks using small samples (RAN);
- ETSI ES 202 336-12 [2] - addressing energy consumption monitoring of ICT equipment in telecommunications networks;
- ETSI ES 202 706-1 [i.1], and ETSI TS 102 706-2 [i.2] - addressing energy consumption and efficiency measurements of base stations in the laboratory.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

[SIST EN 303 472 V1.1.1:2018](https://standards.iteh.ai/catalog/standards/sist/c40e6420-7900-440c-91bf-cfcd0cdc854e/sist-en-303-472-v1-1-1-2018)

<https://standards.iteh.ai/catalog/standards/sist/c40e6420-7900-440c-91bf-cfcd0cdc854e/sist-en-303-472-v1-1-1-2018>

1 Scope

The present document specifies Key Performance Indicators (KPIs), and associated measurement processes, which reflect the operational energy efficiency of the following digital cellular RAN equipment and supporting infrastructures:

- integrated BS;
- distributed BS;
- BS site.

Repeaters are not considered in the present document but are considered for further study (ffs).

Energy consumption of user equipment (UE) is outside the scope of the present document, however, how a user equipment (UE) affects a base station energy performance is considered for further study.

The KPIs specified:

- combine the energy consumption (in the form of electricity) with the volume of data processed;
- combine the energy consumption (in the form of electricity) with the coverage area served;
- are applicable to the above equipment and also, in certain cases, to the sites accommodating the equipment;
- are primarily intended for trend analysis - not to enable comparison between individual BSs unless the conditions of operation are "similar".

The present document specifies KPIs that are only applicable to BS sites supporting a single operator network. KPIs for shared BS and BS site between two operators or more is considered for further study.

The RAN equipment addressed by the present document supports the following RANs, amongst others, both individually and in combination:

- UTRA, WCDMA (IMT-2000 Direct Spread, W-CDMA, UMTS);
- E-UTRA, LTE (IMT-2000 and IMT advanced);
- GSM (IMT-2000 SC, Technology GSM/EDGE).

KPIs for future RAN technologies such as 5G will be considered for future version of the present document once appropriate specifications are completed.

The present document does not define target values for the energy consumption nor the energy efficiency of the equipment for which KPIs are specified.
