## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 26428-3 was prepared by the Society of Motion Picture and Television Engineers (as SMPTE 428-3-2006) and was adopted, under a special "fast-track procedure", by Technical Committee ISO/TC 36, *Cinematography*, in parallel with its approval by the ISO member bodies.

ISO 26428 consists of the following parts, under the general title *Digital cinema (D-cinema) distribution master*:

— *Part 1: Image characteristics*

— *Part 2: Audio characteristics*

— *Part 3: Audio channel mapping and channel labeling*

## Introduction

This International Standard comprises SMPTE 428-3-2006 and the following informative note.

- Informative reference: The French national standard NF S27-100, *Cinematography — Electronic projection rooms of digital cinema type*, provides additional regional information.

# D-Cinema Distribution Master Audio Channel Mapping and Channel Labeling

Page 1 of 9 pages

**Table of contents**

Foreword
Introduction
1 Scope
2 Normative reference
3 Definition of terms
4 Channel maps and labels
5 Channel labels — Supplemental channels
6 Information diagram (not to scale)
Annex A Bibliography

**Foreword**

SMPTE (Society of Motion Picture and Television Engineers) is an internationally-recognized standards-developing organization. Headquartered and incorporated in the United States of America, SMPTE has members in over 80 countries on six continents. SMPTE's engineering documents — including standards, recommended practices, and engineering guidelines — are prepared by SMPTE's technology committees. Participation in these committees is open to all with a bona fide interest in their work. SMPTE cooperates closely with other standards-developing organizations, including ISO, IEC, and ITU.

SMPTE engineering documents are drafted in accordance with the rules given in Section XIII of its Administrative Practices.

SMPTE 428-3 was prepared by the Committee on Digital Cinema Technology (DC28).

**Introduction**

This channel-mapping and labeling scheme is specific to digital cinema while at the same time taking into account historical practice and standards work of both SMPTE and ITU. Current systems and legacy systems were taken into account.

**1 Scope**

This standard defines the mapping and labeling of channels for the Digital Cinema Distribution Master (DCDM) audio in a digital cinema audio system to aid the identification and location of channels. This will allow uniform expression and communication of source audio channels to digital cinema playback loudspeakers. This standard is not intended to define the suitability of these channels for a particular sound

track nor to specify that all channels described herein will be used. It is quite likely however that additional channels will be used in future systems; these are therefore included in this standard as labels only. Channel maps define channel usage of common legacy systems.

## 2 Normative reference

The following document contains provisions which, through reference in this text, constitute provisions of this recommended practice. At the time of publication, the edition indicated was valid. All standards are subject to revision, and parties to agreements based on this practice are encouraged to investigate the possibility of applying the most recent edition of the document indicated below.

AES3-2003, AES Recommended Practice for Digital Audio Engineering — Serial Transmission Format Two-Channel Linearly Represented Digital Audio Data (Revision of AES3-1992)

## 3 Definition of terms

**Left:** A loudspeaker position behind the screen to the far left edge, horizontally, of the screen center as viewed from the seating area.

**Center:** A loudspeaker position behind the screen corresponding to the horizontal center of the screen as viewed from the seating area.

**Right:** A loudspeaker position behind the screen to the far right edge, horizontally, of the screen center as viewed from the seating area.

**LFE screen:** A band-limited low frequency only loudspeaker position at the screen end of the room. Also referred to as "the sub-woofer channel."

**Left surround:** An array of loudspeakers positioned along the left side of the room starting approximately 1/3 of the distance from the screen to the back wall.

**Right surround:** An array of loudspeakers positioned along the right side of the room starting approximately 1/3 of the distance from the screen to the back wall.

**Center surround:** A loudspeaker(s) position on the back wall of the room centered horizontally.

**Left center:** A loudspeaker position mid-way between the center of the screen and the left edge of the screen.

**Right center:** A loudspeaker position mid-way between the center of the screen and the right edge of the screen.

**LFE 2:** A band-limited low frequency only loudspeaker.

**Vertical height front:** A loudspeaker(s) position at the vertical top of the screen. A single channel would be at the center of the screen horizontally. Dual channels may be positioned at the vertical top of the screen and in the left center and right center horizontal positions. Tri-channel may be positioned at the vertical top of the screen in the left, center and right horizontal positions.

**Top center surround:** A loudspeaker position in the center of the seating area in both the horizontal and vertical planes directly above the seating area.

**Left wide:** A loudspeaker position outside the screen area far left front in the room.

**Right wide:** A loudspeaker position outside the screen area far right front in the room.
