

Designation: A 513 – 06b

# Standard Specification for **Electric-Resistance-Welded Carbon and Alloy Steel** Mechanical Tubing<sup>1</sup>

This standard is issued under the fixed designation A 513; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

# 1. Scope\*

1.1 This specification covers electric-resistance-welded carbon and alloy steel tubing for use as mechanical tubing.

1.2 This specification covers mechanical tubing made from hot- or cold-rolled steel.

1.3 This specification covers round, square, rectangular, and special shape tubing.

|                                   | Size Range                          |
|-----------------------------------|-------------------------------------|
| Туре                              | (Round Tubing)                      |
| Electric-Resistance-Welded Tubing | outside diameter from 1/2           |
| from Hot-Rolled Steel             | to 15 in. (19.0 to 381.0 mm)        |
|                                   | wall from 0.065 to 0.650 in.        |
|                                   | (1.65 to 16.50 mm)                  |
| Electric-Resistance-Welded Tubing | outside diameter from 3/8 to 12 in. |
| from Cold-Rolled Steel            | (9.92 to 304.8 mm)                  |
|                                   | wall from 0.022 to 0.134 in. (0.71  |
|                                   | to 3.40 mm)                         |

1.4 Optional supplementary requirements are provided and when desired, shall be so stated in the order.

1.5 The values stated in inch-pound units are to be regarded as the standard.

# 3. Ordering Information

3.1 Orders for material under this specification should include the following as required to adequately describe the desired material:

3.1.1 Quantity (feet or number of lengths),

3.1.2 Name of material (electric resistance-welded carbon or alloy steel mechanical tubing),

3.1.3 Types, conditions and code letters, (Sections 1 and

- - 3.1.5 Flash condition, (12.3),
- 3.1.6 Grade designation, if required, (Section 5),

3.1.7 Report chemical analysis and product analysis, if required (Sections 6 and 7),

3.1.8 Individual supplementary requirements, if required (S1 to S10, inclusive),

3.1.9 Cross section (round, square, rectangular and special shapes),

3.1.10 Dimensions, round, outside and inside and wall thickness (see 8.1 and 8.2) or square and rectangular, outside dimension and wall thickness and corner radii, if required (see 9.1 and 9.2),

3.1.11 Length, round, mill lengths or definite cut length (see 8.3), square and rectangular, specified length (see 9.4),

<sup>&</sup>lt;sup>1</sup> This specification is under the jurisdiction of ASTM Committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.09 on Carbon Steel Tubular Products.

Current edition approved Dec. 1, 2006. Published December 2006. Originally approved in 1964. Last previous edition approved in 2006 as A 513-06a.

3.1.12 Squareness of cut, round tubing, if required, (see 8.4),

- 3.1.13 Burrs removed, if required (see 11.2),
- 3.1.14 Protective coating (see 14.1),
- 3.1.15 Special packaging (see 17.1),
- 3.1.16 Specification designation,
- 3.1.17 End use,
- 3.1.18 Special requirements,
- 3.1.19 Special marking (Section 16), and

3.1.20 Straightness Test Method (see 8.5 and 9.6).

## 4. Materials and Manufacture

4.1 The steel may be made by any process.

4.2 If a specific type of melting is required by the purchaser, it shall be as stated on the purchase order.

4.3 The primary melting may incorporate separate degassing or refining, and may be followed by secondary melting, such as electroslag or vacuum-arc remelting. If secondary melting is employed, the heat shall be defined as all of the ingots remelted from a single primary heat.

4.4 Steel may be cast in ingots or may be strand cast. When steel of different grades is sequentially strand cast, identification of the resultant transition material is required. The producer shall remove the transition material by an established procedure that positively separates the grades.

4.5 Tubes shall be made by the electric-resistance-welded process and shall be made from hot- or cold-rolled steel as specified.

## 5. Chemical Composition

5.1 The steel shall conform to the requirements as to chemical composition prescribed in Table 1 or Table 2 (See Specification A 1040). If no grade is specified, Grades MT 1010 to MT 1020 may be furnished. Analyses of steels other than those listed are available. To determine their availability, the purchaser should contact the producer.

5.2 When a carbon steel grade is ordered under this specification, supplying an alloy grade that specifically requires the addition of any element other than those listed for the ordered grade in Tables 1 and 2 is not permitted.

# TABLE 1Chemical Requirements for Standard Low-CarbonSteels

NOTE 1— Chemistry represents heat analysis. Product analysis, except for rimmed or capped steel, is to be in accordance with usual practice as shown in Table 3.

| Grade –              | Chemical Composition Limits, % |           |                    |                |  |  |  |  |  |
|----------------------|--------------------------------|-----------|--------------------|----------------|--|--|--|--|--|
| Designation          | Carbon                         | Manganese | Phosphorus,<br>max | Sulfur,<br>max |  |  |  |  |  |
| MT <sup>B</sup> 1010 | 0.02-0.15                      | 0.30-0.60 | 0.035              | 0.035          |  |  |  |  |  |
| MT 1015              | 0.10-0.20                      | 0.30-0.60 | 0.035              | 0.035          |  |  |  |  |  |
| MT X 1015            | 0.10-0.20                      | 0.60-0.90 | 0.035              | 0.035          |  |  |  |  |  |
| MT 1020              | 0.15-0.25                      | 0.30-0.60 | 0.035              | 0.035          |  |  |  |  |  |
| MT X 1020            | 0.15-0.25                      | 0.70-1.00 | 0.035              | 0.035          |  |  |  |  |  |

<sup>A</sup> Rimmed or capped steels which may be used for the above grades are characterized by a lack of uniformity in their chemical composition, and for this reason product analysis is not technologically appropriate unless misapplication is clearly indicated.

<sup>B</sup> The letters MT under grade designation indicate Mechanical Tubing.

# 6. Heat Analysis

6.1 An analysis of each heat of steel shall be made by the steel manufacturer to determine the percentages of the elements specified; if secondary melting processes are employed, the heat analysis shall be obtained from one remelted ingot or the product of one remelted ingot of each primary melt. The heat analysis shall conform to the requirements specified, except that where the heat identity has not been maintained or where the analysis is not sufficiently complete to permit conformance to be determined, the chemical composition determined from a product analysis made by the tubular manufacturer shall conform to the requirements specified for heat analysis. When requested in the order or contract, a report of such analysis shall be furnished to the purchaser.

## 7. Product Analysis

7.1 When requested on the purchase order, a product analysis shall be made by the supplier. The number and source of samples for such product analysis shall be based on the individual heat or lot identity of one of the following forms of material:

7.1.1 *Heat Identity Maintained*—One product analysis per heat shall be made on either the flat-rolled stock or tube.

7.1.2 *Heat Identity Not Maintained*—A product from one tube per 2000 ft (610 m) or less for sizes over 3 in. (76.2 mm), and one tube per 5000 ft (150 m) or less for sizes 3 in. and under.

7.2 Samples for product analysis except for spectrochemical analysis shall be taken in accordance with Practice E 1806. The composition thus determined shall correspond to the requirements of Tables 1-3.

7.3 If the original test for product analysis fails, retests of two additional lengths of flat-rolled stock or tubes shall be made. Both retests for the elements in question shall meet the requirements of the specification; otherwise, all remaining material in the heat or lot shall be rejected or, at the option of the producer, each length of flat-rolled stock or tube may be individually tested for acceptance. Lengths of flat-rolled stock or tubes which do not meet the requirements of the specification shall be rejected.

# 8. Permissible Variations in Dimensions for Round Tubing

8.1 Diameter and Wall Thickness (Hot-Rolled Steel)— Variations from specified outside diameter for "as-welded" and "as-welded and annealed" tubing made from hot-rolled steel shall not exceed the amounts prescribed in Table 4. Permissible variations in outside diameter for tubing that has been sinkdrawn for closer tolerance on outside diameter are shown in Table 5. Permissible variations in wall thickness for tubing that has been sink-drawn for closer tolerances on outside diameters are  $\pm 10$ % of the nominal wall or  $\pm 0.010$  in. (0.25 mm), whichever is greater. Permissible variations in wall thickness for tubing made from hot-rolled steel are shown in Table 6. Permissible variation in outside and inside diameter for tubing made from hot-rolled steel that has been mandrel drawn for closer tolerances are shown in Table 5 with wall tolerances shown in Table 7.

# 🕼 A 513 – 06b

#### TABLE 2 Chemical Requirements for Other Carbon and Alloy Steels<sup>A</sup>

NOTE 1—Chemistry represents heat analysis. Product analysis, except for rimmed or capped steel, is to be in accordance with usual practice as shown in Table 3.

| Quede                  | Chemical Composition Limits, % |           |                    |             |           |           |           |               |  |  |  |  |  |
|------------------------|--------------------------------|-----------|--------------------|-------------|-----------|-----------|-----------|---------------|--|--|--|--|--|

<sup>A</sup> Individual determinations may vary from the specified heat limits or ranges to the extent shown in this table, except that any element in a heat may not vary both above and below a specified range.

<sup>B</sup> Where the ellipsis (...) appears in this table, there is no requirement.

8.2 Diameter and Wall Thickness (Cold-Rolled Steel)— Variations in outside diameter and inside diameter of "aswelded" and "as-welded and annealed" tubing made from cold-rolled steel are shown in Table 8. Outside diameter tolerances for cold-rolled steel tubing, sink drawn and mandrel drawn, are shown in Table 5. Wall thickness tolerances for" as-welded" tubing made from cold-rolled steel are shown in Table 9. Permissible variations in wall thickness for round tubing, mandrel drawn for closer tolerances, are shown in Table 7. Permissible variations in wall thickness for tubing that has been sink-drawn for closer tolerances on outside diameter are  $\pm 10$ % of the nominal wall or  $\pm 0.010$  in. (0.25 mm), whichever is greater.

8.3 Length (Hot- and Cold-Rolled Steel)—Mechanical tubing is commonly furnished in mill lengths 5 ft (1.5 m) and over. Definite cut lengths are furnished when specified by the purchaser. Tolerances for definite cut lengths round tubing shall be as given in Tables 10 and 11.

8.4 Squareness of Cut (Hot- and Cold-Rolled Steel)—When specified, tolerance for squareness of cut of round tubing shall be as given in Table 12. Measurements are made with use of an "L" square and feeler gage. Side leg of square to be equal to tube diameter except minimum length of 1 in. (25.4 mm) and maximum length of 4 in. (101.6 mm). Outside diameter burr to be removed for measurement.

8.5 *Straightness*— The straightness tolerance for round tubing is 0.030 in./3 ft (0.76 mm/1 m) lengths to 8.000 in. (203 mm) outside diameter. For 8.000 in. outside diameter and above, straightness tolerance is 0.060 in./3 ft (1.52 mm/1 m) lengths. For lengths under 1 ft the straightness tolerance shall

# 🕼 A 513 – 06b

## TABLE 4 Diameter Tolerances for Type I (A.W.H.R.) Round Tubing

NOTE 1-Measurements for diameter are to be taken at least 2 in.<sup>A</sup> from the ends of the tubes.

<sup>A</sup> 1 in. = 25.4 mm.

<sup>B</sup> Flash-In-Tubing is produced only to outside diameter tolerances and wall thickness tolerances and the inside diameter welding flash does not exceed the wall thickness or 3/32 in., whichever is less.

<sup>C</sup> Flash Controlled to 0.010 in. maximum tubing consists of tubing which is commonly produced only to outside diameter tolerances and wall thickness tolerances, in which the height of the remaining welding flash is controlled not to exceed 0.010 in.

<sup>D</sup> No Flash tubing is further processed for closer tolerances with mandrel-tubing produced to outside diameter and wall, inside diameter and wall, or outside diameter and inside diameter to tolerances with no dimensional indication of inside diameter flash. This condition is available in Types 5 and 6.

<sup>E</sup> Flash Controlled to 0.005 in. maximum tubing is produced to outside diameters and wall thickness tolerance, inside diameter and wall thickness tolerances, or outside diameters and inside diameter tolerances, in which the height of the remaining flash is controlled not to exceed 0.005 in. Any remaining flash is considered to be part of the applicable inside diameter tolerances.

<sup>F</sup> Birmingham Wire Gage.

<sup>G</sup> The ovality shall be within the above tolerances except when the wall thickness is less than 3 % of the outside diameter, in such cases see 8.6.1.

### TABLE 5 Diameter Tolerances for Types 3, 4, 5, and 6 (S.D.H.R., S.D.C.R., M.D. and S.S.I.D) Round Tubing

NOTE 1—Measurements for diameter are to be taken at least 2 in. from the ends of the tubes.

<sup>4</sup> Tubing, flash in or flash controlled which is further processed without mandrel to obtain tolerances closer than those shown in Tables 4 and 8.

<sup>B</sup> The ovality shall be within the above tolerances except when the wall thickness is less than 3 % of the outside diameter, in such cases see 8.6.2.

<sup>C</sup> Tubing produced to outside diameter and wall thickness, or inside diameter and wall thickness, or outside diameter and inside diameter, with mandrel to obtain tolerances closer than those shown in Tables 4 and 8 and no dimensional indication of inside diameter flash.

<sup>D</sup> Where the ellipsis (...) appears in this table, the tolerance is not addressed.

8.6 *Ovality (Hot- and Cold-Rolled Steel)*—The ovality shall be within the tolerances except when the wall thickness is less than 3 % of the outside diameter.

8.6.1 In such cases for Types 1 and 2 (A.W.H.R. and A.W.C.R.) the ovality may be 50 % greater than the outside tolerances but the mean outside diameter shall be within the specified tolerance.

8.6.2 For Types 3, 4, 5, and 6 (S.D.H.R., S.D.C.R., M.D., and S.S.I.D.) the additional ovality shall be as follows but the mean outside diameter shall be within the specified tolerance:

|  | Additional Ovality  |
|--|---------------------|
| Outside Diameter, in. (mm)               | Tolerance, in. (mm) |
| Up to 2 (50.8), incl                     | 0.010 (0.25)        |
| Over 2 to 3 (50.8 to 76.2), incl         | 0.015 (0.38)        |
| Over 3 to 4 (76.2 to 101.6), incl        | 0.020 (0.51)        |
| Over 4 to 5 (101.6 to 127.0), incl       | 0.025 (0.64)        |
| Over 5 to 6 (127.0 to 152.4), incl       | 0.030 (0.76)        |
| Over 6 to 7 (152.4 to 177.8), incl       | 0.035 (0.89)        |
| Over 7 to 8 (177.8 to 203.2), incl       | 0.040 (1.02)        |
| Over 8 to 9 (203.2 to 228.6), incl       | 0.045 (1.14)        |

| Over 11 to 12 (279.4 to 304.8), incl     | 0.060 (1.52)        |
| Over 12 to 12.500 (304.8 to 317.5), incl | 0.065 (1.65)        |
|  |                     |

# 9. Permissible Variations in Dimensions of Square and Rectangular Tubing

9.1 Diameter and Wall Thickness—Permissible variations in outside dimensions for square and rectangular tubing shall be as given in Table 13. The wall thickness tolerance is  $\pm 10$  % of the nominal wall thickness.

9.2 *Corner Radii*— Unless otherwise specified, the corners of square and rectangular tubing shall be slightly rounded inside and outside, consistent with wall thickness. The outside corners may be slightly flattened. The radii of corners shall be as given in Table 14.

9.3 *Squareness*—Permissible variations for squareness shall be determined by the following equation:

$$\pm b = c \ x \ 0.006$$
 in.

where:

b = tolerance for out-of-square, and

c = largest external dimension across flats.

The squareness of sides is commonly determined by one of the following methods.

9.3.1 A square with two adjustable contact points on each arm, is placed on two sides. A fixed feeler gage is then used to measure the maximum distance between the free contact point and the surface of the tubing.

9.3.2 A square equipped with a direct reading vernier, may be used to determine the angular deviation which, in turn, may be related to distance in inches.

9.4 *Length*—Variations from the specified length shall not exceed the amount prescribed in Table 15.

9.5 *Twist*—Twist tolerances are shown in Table 16. The twist in square and rectangular tubing may be measured by holding one end of the tubing on a surface plate and noting the height of either corner of the opposite end of same side above the surface plate. Twist may also be measured by the use of a beveled protractor equipped with a level, and noting the angular deviation on opposite ends, or at any point throughout the length.

9.6 *Straightness*— The straightness tolerance is  $\frac{1}{16}$  in./3 ft (1.7 mm/1 m). The test method for straightness measurement is at the manufacturer's option, unless a specific test method is specified in the purchase order.
